Caution Regarding Forward-Looking Statements

Both these slides and the accompanying oral presentations contain certain forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 and forward-looking information within the meaning of the Securities Act (Ontario) and comparable legislation in other provinces (collectively referred to herein as “forward-looking statements”). Forward-looking statements can be identified by the use of words such as “plans,” “expects” or “does not expect,” “is expected,” “budget,” “scheduled,” “estimates,” “forecasts,” “intends,” “anticipates” or “does not anticipate,” or “believes,” or variation of such words and phrases or that certain actions, events or results “may,” “could,” “should,” “would,” “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Teck to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. These forward-looking statements include management statements regarding expectations with respect to: future value catalysts; the creation of value through Project Satellite; production, supply, demand and outlook regarding coal, copper, zinc and energy for Teck and global markets generally; projected and targeted operating and capital costs; expected EBITDA margins at our operations; future value from QB2; QB2’s share of remaining equity capital and timing of contributions relating to our QB2 project; the terms and availability of project financing for the QB2 project; potential additional return of capital to shareholders, including by way of repurchasing or refinancing outstanding notes; all projections and expectations regarding QB2 and QEB set out in the presentation; assumptions that QEB and QB2 are moving forward but are subject to all of the risks and uncertainties referred to herein; Teck’s relationship with its project partners; economic conditions and the world price of copper, zinc and other base metals will continue to impact Teck’s business; the anticipated financial impact of project debottlenecking; the production capabilities and timing of our copper, zinc and other projects; production, supply, demand and outlook regarding coal, copper, zinc and energy for Teck and global markets generally; projected and targeted operating and capital costs; expected EBITDA margins at our operations; future value from QB2; QB2’s share of remaining equity capital and timing of contributions relating to our QB2 project; the terms and availability of project financing for the QB2 project; potential additional return of capital to shareholders, including by way of repurchasing or refinancing outstanding notes; all projections and expectations regarding QB2 and QEB set out in the presentation; assumptions that QEB and QB2 are moving forward but are subject to all of the risks and uncertainties referred to herein; Teck’s relationship with its project partners; economic conditions and the world price of copper, zinc and other base metals will continue to impact Teck’s business; the anticipated financial impact of project debottlenecking; the production capabilities and timing of our copper, zinc and other projects; projected copper, zinc and other production, long-life and expansion potential, projected IRR, QB2 throughput, mine life, projected copper production, including Teck’s pro-forma copper exposure estimates, strip-ratios, costs (including C1 and AISC), reserves and resources, construction schedule and ownership of pipelines and port facilities, Teck’s expectations around how it will fund development costs and its expectation that its solid financial position and return of capital to shareholders will be maintained through QB2 construction, Teck’s expectation that it will have significant free cash flow between 2018 and 2020, all economic and financial projections relating to the QB2 project and our contributions thereto including expected EBITDA from the project, expansion and extension potential, and all other projections and expectations regarding the QB2, QEB and overall project timing strategy and targets, global economic conditions, mining economics and the likelihood of orderly price movements, our ability to obtain the necessary approvals and permits for our projects, the success of our projects and the performance of our business, the successful execution of our workforce transition strategy, the success of our workforce transition strategy and the potential impact of project-sanctions and mine production. Our Elk Valley Water Quality Plan statements are based on assumptions regarding the effectiveness of current technology, and that it will perform as expected. Statements concerning future production costs or volumes are based on numerous assumptions of management regarding operating matters and on assumptions that demand for products develops as anticipated, that customers and other counterparties perform their contractual obligations, that operating and capital plans will not be disrupted by issues such as mechanical failure, unavailability of parts, staff, labour disputes, interruption in transportation or utilities, adverse weather conditions, and that there are no material unanticipated variations in the cost of energy or supplies. Statements regarding anticipated steelmaking coal sales volumes and average steelmaking coal prices depend on timely arrival of vessels and performance of our steelmaking coal-loading facilities, as well as the level of spot pricing supplies. All QB2 economic analysis assume the inferred resources in the Sanction Case and inferred resources are considered too geologically speculative to be economic. Forward-looking statements relating to the timing and amount of Teck’s equity contributions for QB2 assume that the project spending does not increase and contributions are required in accordance with the current project schedule and that project financing will be made available on terms acceptable to us in Q2 2019. All QB2 mining and economic projections including QB2 mine life, throughput of first production, amount of production costs, including C1 and AISC, expected EBITDA from the project and projected capital intensity figures depend on the QB2 project coming into production in accordance with the current budget and project schedule. Forward looking statements regarding the amount of pro forma copper produced from QB2 depends on Teck achieving its projected copper production targets for 2021 and QB2 producing as expected. The unescalated contributions and capital requirements for QEB do not include a number of variables that are described in the footnotes to the disclosure and could be greater than once those variables are taken into account. The final amount of the US$50 million contingent payment is tied to throughput and depends on achieving certain throughput targets by December 31, 2025 and is subject to reduction in the event that certain throughput and recovery targets are not achieved. Assumptions are also included in the footnotes to various slides. The foregoing list of assumptions is not exhaustive.
Caution Regarding Forward-Looking Statements

Statements regarding returns of cash to shareholders include assumptions regarding our future business and prospects and other uses for cash or retaining earnings. Payment of dividends is in the discretion of the board of directors. Statements regarding our reserve and resource life estimates assume the mine life of longest lived resource in the relevant commodity is achieved, assumes production at planned rates and in some cases development of as yet undeveloped projects and assumes resources are upgraded to measured categories. Management’s expectations of mine life are based on the current planned production rates and assume that all reserves and resources described in this presentation are developed. Assumptions regarding our potential reserve and resource life assume that all resources are upgraded to reserves and that all reserves and resources could be mined. Cost statements are based on assumptions noted in the relevant slide or footnote. Statements regarding future production are based on the assumption of project sanctions and mine production. Our Elk Valley Water Quality Plan statements are based on assumptions regarding the effectiveness of current technology, and that it will perform as expected. Statements concerning future production costs or volumes are based on numerous assumptions of management regarding operating matters and on assumptions that demand for products develops as anticipated, that customers and other counterparties perform their contractual obligations, that operating and capital plans will not be disrupted by issues such as mechanical failure, unavailability of parts and supplies, labour disturbances, interruption in transportation or utilities, adverse weather conditions, and that there are no material unanticipated variations in the cost of energy or supplies.

All QB2 economic analysis assume the inferred resources in the sanction case and inferred resources are considered too geologically speculative to be economic. Future-looking statements relating to the timing and amount of Teck’s equity contributions for QB2 assume that the project spending does not increase and contributions are required in accordance with the current project schedule and that project financing will be made available on terms acceptable to us in Q2 2019. All QB2 mining and economic projections (including QB2 mine life, throughput, timing of first production, amount of production, costs (including C1 and AS1C), expected EBITDA from the project and projected capital intensity figures depend on the QB2 project coming into production in accordance with the current budget and project schedule.

Forward looking statements regarding the amount of pro forma copper produced from QB2 depends on Teck achieving its projected copper production targets for 2021 and QB2 producing as expected. The unescalated contributions and capital requirements for QB2 do not include a number of variables that are described in the footnotes to the disclosure and could be greater once those variables are taken into account. The final amount of the US$50 million contingent payment is tied to throughput and depends on achieving certain throughput targets by December 31, 2025 and is subject to reduction in the event that certain throughput and recovery targets are not achieved. The amount of the contingent payment regarding QB3 depends on a sanction decision being made by December 31, 2031 and may also be reduced if certain throughput and recovery targets on QB2 are not achieved. Assumptions are also included in the footnotes to various slides. The foregoing list of assumptions is not exhaustive.

Factors that may cause actual results to vary materially include, but are not limited to: changes in commodity and power prices; changes in market demand for our products; changes in interest and currency exchange rates; acts of foreign and domestic governments; the outcome of legal proceedings; inaccurate geological and metallurgical assumptions (including with respect to the size, grade and recoverability of reserves and resources); unanticipated operational difficulties (including failure of plant, equipment or processes to operate in accordance with specifications or expectations, cost escalation, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job action, adverse weather conditions and unanticipated events related to health, safety and environmental matters); any change or deterioration in our relationships with our joint venture partners; union labour disputes; political risk; social unrest; consequences of climate change; changes in laws or regulations or enforcement thereof; development and use of new technology; failure of customers or counterparties (including but not limited to rail, port, pipeline and other logistics providers) to perform their contractual obligations; changes in our credit ratings or the financial market in general; unanticipated increases in the cost to construct or to procure our products; difficulties in obtaining permits or other project authorization for our projects; inability to address or resolve permits or environmental impact assessments; change in tax benefits or tax rates; resolution of environmental and other proceedings or disputes; failure to obtain project financing for QB2 on acceptable terms or in a timely manner; and changes or deterioration in general economic conditions. We will not achieve the maximum mine lives of our projects, or be able to mine all reserves at our projects or operations, if we do not obtain permits or other regulatory approvals that are controlled by us, as a result the actions of our partners may affected anticipated outcomes. NuevaUnión and our Galore Creek project are each 50% owned by us and the timing of development may be impacted by the actions of our partner. Unanticipated technology or environmental interactions could affect the effectiveness of our Elk Valley Water Quality Plan strategy.

Purchases of Class B shares under the normal course issuer bid may be impacted by, among other things, availability of Class B shares, share price volatility, and availability of funds to purchase shares.

We assume no obligation to update forward-looking statements except as required under relevant securities laws. Further information concerning assumptions, risks and uncertainties associated with these forward-looking statements and our business can be found in our most recent Annual Information Form, as well as subsequent filings of our management’s discussion and analysis of quarterly results and other subsequent filings, all filed under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov).

QB2 Project Disclosure

All economic analysis with respect to the QB2 project based on a development case which includes inferred resources within the life of mine plan, referred to as the Sanction Case, which is the case on which Teck is basing its development decision for the QB2 project. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling. Nonetheless, based on the nature of the mineralization, Teck has used a mine plan including inferred resources as the development mine plan for the QB2 project.

The economic analysis of the Sanction Case, which includes inferred resources, may be compared to economic analysis regarding a hypothetical mine plan which does not include the use of inferred resources as mill feed, referred to as the Reserve Case, and which is set out in Appendix slides “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison”.

The scientific and technical information regarding the QB2 project was prepared under the supervision of Rodrigo Marinho, P. Geo, who is an employee of Teck. Mr. Marinho is a qualified person, as defined under National Instrument 43-101.
A Transformational Time for Teck

**MILESTONES ACHIEVED**
- QB2 permit received, sanctioning announced and partnership closed
- Fort Hills ramp up
- Waneta sale closed
- Returned to investment grade credit rating

**SOLID FOUNDATION**
- Quality operating assets in stable jurisdictions
- Right commodities at the right time
- Strong financial position
- Sustainability leader

**FUTURE VALUE CATALYSTS**
- Cash returns to shareholders
- Potential for further reduction in notes outstanding
- QB2/QB3
- Project Satellite value creation
- Transformation through innovation

**CAPITAL ALLOCATION FRAMEWORK**
Quality Long Life Operating Assets in Stable Jurisdictions

### STEELMAKING COAL
Elk Valley Mines in B.C.

- High quality steelmaking coal
- Low carbon intensity
- ~$24 billion of Adjusted EBITDA since the Fording acquisition\(^1\)
- EBITDA margin 56%\(^2\)

### ZINC
Red Dog in Alaska

- Bottom quartile of cost curve
- Strong market position
- Outstanding potential at Aktigiruq
- Red Dog EBITDA margin of 62%\(^2\)

### COPPER
Antamina in Peru, Highland Valley in B.C., Carmen de Andacollo in Chile

- Competitive cost
- Low carbon intensity
- QB2 in construction
- Growth options: QB3, Zafranal, San Nicolás, Mesaba, Galore Creek, NuevaUnión
- EBITDA margin of 45%\(^2\)

### ENERGY
Fort Hills in Alberta

- Higher quality, lower carbon intensity product
- Low operating costs
- Full production in Q4 2018
- Evaluating future debottlenecking opportunities of 10-20%

**FOUNDATION OF SUSTAINABILITY**
Responsible Tailings Management

Comprehensive systems and procedures in place based on six pillars:

1. Surveillance Technology
2. Staff Inspections
3. Annual External Inspections
4. Internal Review
5. Detailed Third-Party Reviews
6. Independent Review Boards

Full emergency preparedness plans in place at relevant facilities:

- Plans reviewed with local stakeholders
- Drills and community meetings conducted

Tailings management and emergency response aligned with the Mining Association of Canada Towards Sustainable Mining Protocols.

Related SASB¹ Metric: EM-MM-150a.1 | Link to Data

¹ 100% of tailings facilities independently verified to meet external/internal standards
² 100% of our major tailings facilities have independent review boards
STEELMAKING COAL

- Market remains tight
- Growing demand, especially in India & Southeast Asia
- Capital markets are rationing capital to coal, which is directed at thermal coal but impacts steelmaking coal; will constrain supply and increase the value of existing assets
- Supply disruptions continue, investment remains modest, permitting is challenging
- Chinese safety checks restrict domestic production
- Teck’s steelmaking coal sales to China declined from ~30% in 2013 to ~10% in 2018, and could be below 10% in 2019. In the same period, our sales to India increased from ~5% to ~15%

Steelmaking coal price averaged US$182/t, or US$200/t on an inflation-adjusted basis, from January 1, 2008\(^1\)
**Strong Fundamentals in Copper and Zinc**

**COPPER**
- Market moving into deficit for the next two years
- Prices recovered to just below US$3.00/lb in early 2019
- Mine production growth expected to slow
- Market remains tight, and new smelters in China are ramping up
- Scrap availability is constrained due to environmental restrictions in China
- Cathode demand is weaker, but still positive
- Structural deficit forecasted for 2021+

**ZINC**
- Global concentrate market in surplus due to decreased refined production; TC’s increased rapidly in 2H 2018
- Large drawdowns of stocks are bringing exchange inventory levels to critical levels
- Growing concern over potential impacts on zinc consumption from the macro economic backdrop
- Smelter bottleneck expected to develop in 2019, with concentrate surpluses and refined deficits
- Additional mine and smelter production needed
Strong Financial Position

• Strong operating cash flow
• ~C$8.7 billion of liquidity.
  – Includes C$2.5 billion in cash, with C$1.3 billion in Chile for development of the QB2 project
• No significant note maturities prior to 2024
• QB2 partnership and financing plan dramatically reduces Teck’s capital requirements
  – Teck’s share of remaining equity capital before escalation is only ~US$693 million, after transaction proceeds and project financing.
  – No contributions required until late 2020.
• Upgraded to investment grade by four agencies in Q1 2019
  – Cancelled C$1.1 billion in letters of credit

Cash Returns to Shareholders

• In November 2018, announced a $400 million purchase of Class B shares under NCIB, with $348 million or ~11.9 million shares purchased to April 22, 2019

• Continue to pay $0.05/share regular quarterly dividend ($0.20/share annualized)

• Paid $0.10/share supplemental dividend in December 2018

• From January 1, 2003 to March 31, 2019, ~$6.0 billion returned to shareholders:
  – $1.7 billion share buybacks
  – $4.0 billion base dividends
  – $300 million supplemental dividends

Significant Returns to Shareholders ($M)
Potential for Further Reduction of Outstanding Notes

- US$600 million 8.5% 2024 notes callable in June 2019
- Teck will be opportunistic on further reductions or refinancing of outstanding notes

No significant debt maturities prior to 2024.
QB2 Value Creation

Delivers on Copper Growth Strategy

- Rebalances Teck’s portfolio over time to make the contribution from copper similar to steelmaking coal
- World class, low cost copper opportunity in an excellent geopolitical jurisdiction
- First production in late 2021 when copper is expected to be in deficit
- Vast, long life deposit with expansion potential (QB3)
- Teck’s IRR is significant¹
  - At US$3.00/lb copper, unlevered IRR is 19% and levered IRR is 30%
  - At US$3.50/lb copper, unlevered IRR is 24% and levered IRR is 40%²

Based on Sanction Case (Including 199 Mt Inferred Resources)
Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

¹ At US$3.00/lb copper, unlevered IRR is 19% and levered IRR is 30%
² At US$3.50/lb copper, unlevered IRR is 24% and levered IRR is 40%
³ Low Strip Ratio
⁴ World class, low cost copper opportunity in an excellent geopolitical jurisdiction
A Transformational Time for Teck

FUTURE VALUE CATALYSTS

- Cash returns to shareholders
- Potential to further reduce outstanding notes
- Growth through QB2/QB3 execution
- Project Satellite value creation
- Transformation through innovation

COMPELLING VALUE
1. Adjusted EBITDA generated from October 1, 2008 to March 31, 2019. This reflects the change in accounting policy to capitalize stripping from January 1, 2013. Waste rock stripping costs incurred in the production phase of a surface mine are recorded as capitalized production stripping costs within property, plant and equipment when it is probable that the stripping activity will improve access to the orebody when the component of the orebody or pit to which access has been improved can be identified, and when the costs relating to the stripping activity can be measured reliably. When the actual waste-to-ore stripping ratio in a period is greater than the expected life-of-component waste-to-ore stripping ratio for that component, the excess is recorded as capitalized production stripping costs. Adjusted EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
2. Three months ended March 31, 2019. EBITDA margin is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 6: Responsible Tailings Management

Slide 7: Steelmaking Coal Market Remains Tight

Slide 9: Strong Financial Position
1. Liquidity is as at April 22, 2019 and includes $2.5 billion in cash, of which $1.3 billion is in Chile for the development of our QB2 project.
2. On a go forward basis from January 1, 2019. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.
3. Assumes project finance facility available in Q2 2019, and US$1.2 billion of Sumitomo contributions associated with purchase price spent before first draw. Thereafter, project finance facility used to fund all capital costs until target debt : capital ratio achieved on a cumulative basis, after which point project finance and equity contributions are made ratably based on this same debt : capital ratio.
4. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
5. As at May 2, 2019.

Slide 11: Potential for Further Reduction of Outstanding Notes
1. Public notes outstanding as at March 31, 2019.

Slide 12: QB2 Value Creation
2. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.
3. 1 truck = a strip ratio of 0.1.
QB2 Project Disclosure

All economic analysis with respect to the QB2 project based on a development case which includes inferred resources within the life of mine plan, referred to as the Sanction Case, which is the case on which Teck is basing its development decision for the QB2 project. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling. Nonetheless, based on the nature of the mineralization, Teck has used a mine plan including inferred resources as the development mine plan for the QB2 project. The economic analysis of the Sanction Case, which includes inferred resources, may be compared to economic analysis regarding a hypothetical mine plan which does not include the use of inferred resources as mill feed, referred to as the Reserve Case, and which is set out in Appendix slides “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison”.

The scientific and technical information regarding the QB2 project was prepared under the supervision of Rodrigo Marinho, P. Geo, who is an employee of Teck. Mr. Marinho is a qualified person, as defined under National Instrument 43-101.
QB2 Summary

Benefits of Partnering

✓ Prudent approach to capital allocation
  - Choosing measured growth preserves ability to return further capital to shareholders and reduce outstanding bonds

✓ Partnership and financing plan dramatically reduces Teck’s QB2 capital requirements
  - Teck’s share of remaining equity is approximately US$693 million before escalation¹
  - No contributions required from closing until late 2020²

✓ Significantly enhances Teck’s economics bringing after-tax levered IRR to 30-40%³

✓ Builds on already strong relationship with Sumitomo Metal Mining and Sumitomo Corporation

Benefits of Sanctioning QB2

✓ Rebalances Teck’s portfolio over time making the contribution from copper similar to steelmaking coal

✓ World class, low cost copper opportunity in an excellent geopolitical jurisdiction

✓ First production in late 2021 when copper is expected to be in deficit

✓ Vast, long life deposit with expansion potential (QB3)

✓ Advanced stage of operational readiness incorporating leading technology and innovation to create a modern mine

✓ Experienced team ready to execute together with industry leading EPCM partner in Bechtel
# QB2 Transaction Terms

| **Upfront Consideration** | Total contribution of US$1.2 billion into the QB2 project for a 30% interest  
- US$800 million earn-in contribution  
- US$400 million matching contribution |
|---------------------------|----------------------------------------------------------------------------------|
| **Contingent Consideration** | US$50 million to Teck on QB2 achieving mill throughput optimization target of 154 ktpd  
- 12% of the incremental QB3 expansion NPV upon sanction  
  - 8% contingent earn-in contribution  
  - 4% matching contribution |
| **Post-Transaction Project Ownership** | 60% Teck / 30% Sumitomo / 10% ENAMI  
- 25% Sumitomo Metal Mining  
- 5% Sumitomo Corporation |
| **Capital Cost Funding** | US$2.5 billion project financing planned  
- Remaining capital cost funded two-thirds by Teck, one-third by Sumitomo  
- ENAMI has 10% non-funding interest |
| **Conditions & Closing** | Customary conditions, including regulatory approvals  
- Transaction effective date January 1, 2019  
- Closed March 29, 2019 |
QB2 Rebalances Teck’s Portfolio

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

- Rebalances Teck’s portfolio over time to make the contribution from copper similar to steelmaking coal
- On a consolidated basis copper production is doubled
- On an attributable basis copper production increases by ~60%
- Based on expected long term prices for copper and steelmaking coal, increased copper production could reduce steelmaking coal to below 50% of EBITDA over time
- QB3 and other copper development projects could further increase copper exposure and diversification
QB2 Project Highlights

World Class Development

- Vast, long life deposit in favourable jurisdiction
- Will be a top 20 producer
- Very low strip ratio
- Low all-in sustaining costs (AISC¹)
- High grade, clean concentrates
- Significant brownfield development
- Permitted with engineering 85%² complete; construction underway
- Community agreements in place and strong local relationships
- Expansion potential (QB3) with potential to be a top 5 producer

**Based on Sanction Case (Including 199 Mt Inferred Resources)**

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.
Prudent Balance Sheet Management Through QB2

Maintaining Solid Financial Position

- Teck intends to fund its share of required equity capital through cash on hand and free cash flow
  - No cash requirement from Teck post closing until late 2020\(^1\)
  - Significant free cash flow anticipated between 2018 and 2020
  - Current liquidity of approximately C$8.7 billion, including C$2.5 billion in cash with C$1.3 billion in Chile for development of the QB2 project\(^2\)
  - Only US$117 million in debt maturities through 2021
- Transaction preserves Teck's solid financial position and ability to return cash to shareholders through QB2 construction

QB2 Development Funding

<table>
<thead>
<tr>

Transaction proceeds and project financing reduce Teck’s equity contributions to ~US$693 million with no contributions required post-closing until late 2020.

Based on Sanction Case (Including 199 Mt Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources).
QB2’s Competitive Cost Position

Competitive Operating Cost & Capital Intensity

- Given the exceptionally low strip ratio, consistent grade profile, compact site layout, and high level of automation, QB2 is expected to have attractive and relatively stable operating costs

- Exceptional strip ratio of 0.70 LOM, meaning for every one tonne of ore mined, only 0.70 tonnes of waste need to be mined (0.44 over first 5 full years)
  - Compares to other world class asset strip ratios of 3.5 for Antamina, 3.1 for Collahuasi, and 2.5 for Escondida
  - Major benefit to sustaining capital since it reduces mobile fleet size and replacement costs

- Capital intensity of ~US$15k/tpa copper equivalent is in line or lower than recent comparably sized projects with the ability to amortize these costs over a very long mine life

Low Cash Cost Position

C1 Cash Cost\(^3\) & AISC\(^4\) Curve (US$/lb, 2023E)\(^1\)

Based on Sanction Case (Including 199 Mt Inferred Resources)

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling
Vast, Long Life Deposit at QB

QB2 Uses Less than 25% of R&R

• Resource exclusive of Reserve increased 40% since 2017
• Initial 28 year mine life processes <25% of the currently defined Reserve and Resource Tonnage
• Deposit is capable of supporting a very long mine life based on throughput rate of 143 ktpd by utilizing further tailings capacity at already identified sites
• Actively evaluating potential options to exploit value of full resource through mill expansion and/or mine life extension
  - Mineralization is open in multiple directions with drilling ongoing

Beyond the extensive upside included in the defined QB deposit, the district geology is highly prospective for exploration discovery and resource addition

Extension Potential

<table>
<thead>

</tr>
</tbody>
</table>

- Mineralization is open in multiple directions with drilling ongoing
QB3 – Long-Term Growth
Expansion potential to realize full potential of the orebody

QB2 utilizes less than 25% of resource
QB3 evaluating options to exploit the full value of the resource through mill expansion and / or mine life extension

Ongoing work includes:
- ~18 km of drilling in 2018
- 60 km of drilling planned for 2019
- Scoping Study underway to be followed by a Prefeasibility Study

Key Value Drivers:
- Defining the full size of the deposit through drilling
- Proactive evaluation of long-term options for production
- Maximizing the performance of the QB2 plant
- Leveraging the QB2 infrastructure to target production increases at a lower capital intensity

2018 drilling returned long intervals of +0.5% Cu, with predictable sulfide zonation patterns

Copper mineralization from 2018 drilling

1
Construction Approach

- Key project elements are segregated by area and can be managed more efficiently reducing risk:
  - Open pit mine (120 Mtpa peak);
  - Concentrator (143 ktpd);
  - Tailings storage facility (1.4 Bt capacity);
  - Concentrate and water supply pipelines (165 km); and
  - Port facility (including a desalination plant and concentrate filtration plant)

- QB will own and operate its pipelines and port facilities

Operational Readiness

- Early focus on operational readiness and commissioning to ensure a seamless transition to operations
- Organizational design incorporating Integrated Operations and Business Partner Model
  - Driving value by linking process, people and workplace design
- Engagement of experienced consultants to support detailed plan development and execution, integrated operations design and systems, and commissioning planning
# Execution Readiness at QB2

ENAMI Interest in QB

Overview

- The government of Chile owns a 10% non-funding interest in Compañía Minera Teck Quebrada Blanca S.A. (CMTQB) through its state-run minerals company, Empresa Nacional de Minería (ENAMI)
- ENAMI has been a partner at QB since 1989 and is a 10% shareholder of Carmen de Andacollo
- ENAMI is not required to fund QB2 development costs
- Project equity funding in form of:
  - 25% Series A Shares
  - 75% Shareholder Loans
- Until shareholder loans are fully repaid, ENAMI is entitled to a minimum dividend, based on net income, that approximates 2.0-2.5% of free cash flow
  - Thereafter, ENAMI receives 10% of dividends / free cash flow
- ENAMI is entitled to board representation

Organizational Chart

  - 16.67%
- Chile HoldCo
  - 33.33%
Quebrada Blanca Accounting Treatment

BALANCE SHEET

• 100% of project spending included in property, plant and equipment
• Debt includes 100% of project financing
• Total shareholder funding to be split between loans and equity approximately 75%/25% over the life of the project
• Sumitomo (SMM/SC)\(^1\) contributions will be shown as advances as a non-current liability and non-controlling interest as part of equity
• Teck contributions, whether debt or equity eliminated on consolidation

INCOME STATEMENT

• Teck’s income statement will include 100% of QB’s revenues and expenses
• Sumitomo’s\(^1\) 30% and ENAMI’s 10% share of profit will show as profit attributable to non-controlling interests

CASH FLOW

• 100% of project spending included in capital expenditures
• In 2019, Sumitomo\(^1\) contribution will recorded within financing activities and split approximately 50%/50% as:
  – Loans recorded as “Advances from Sumitomo”
  – Equity recorded as “Sumitomo Share Subscriptions”
• 100% of draws on project financing included in financing activities
• After start-up of operations
  – 100% of profit in cash flow from operations
  – Sumitomo’s\(^1\) 30% and ENAMI’s 10% share of distributions included in non-controlling interest
Notes - Appendix: Quebrada Blanca

Slide 18: QB2 Summary
1. On a go forward basis from January 1, 2019. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo (not including contingent consideration). Based on remaining capital costs of US$4.739 billion in constant Q2 2017 dollars, assuming a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction, but including approximately US$500 million in contingency.
2. Assumes project finance facility available in Q2 2019, and US$1.2 billion of Sumitomo contributions associated with purchase price spent before first draw. Thereafter, project finance facility used to fund all capital costs until target debt : capital ratio achieved on a cumulative basis, after which point project finance and equity contributions are made ratably based on this same debt : capital ratio.

Slide 19: QB2 Transaction Terms
1. Sumitomo has agreed to make a supplemental payment to Teck of US$50 million if QB2 project throughput reaches 154,000 tonnes per day prior to the earlier of the sanctioning of a major expansion or December 31, 2025. Expansion contingent consideration is payable if project expansion sanction occurs before December 31, 2031 and Sumitomo elects to participate. If Sumitomo elects not to participate in the expansion, its interest in the joint venture will be diluted on a basis that effectively gives Teck 100% of the value of the expansion. Both these supplemental payments are subject to downward adjustment in the event that QB2 mill throughput and copper recoveries do not meet certain targets.

Slide 20: QB2 Rebalances Teck’s Portfolio
1. We include 100% of the production and sales from QB and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% of production and sales from Antamina, representing our proportionate equity interest in Antamina. Copper production includes cathode production at QB.
2. Based on QB2 Sanction Case first five full years of copper production.

Slide 21: QB2 Project Highlights
1. All-in sustaining costs (AISC) is a non-GAAP financial measure.
3. Resources figures as at November 30, 2018. Resources are reported separately from, and do not include that portion of resources classified as reserves. See “QB2 Reserves and Resources Comparison” slide for further details.
4. We include 100% of the production and sales from QB and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% of production and sales from Antamina, representing our proportionate equity interest in Antamina. Copper production includes cathode production at QB.
5. Based on QB2 Sanction Case first five full years of copper production.
Slide 22: QB2 is a World Class Copper Opportunity

1. Unless otherwise stated, all metrics assume US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver.
2. Range based on US$3.00–$3.50/lb copper price. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
3. 35

4. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
5. C1 cash costs are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
6. All-in sustaining costs (AISC) are calculated as C1 cash costs after by-product credits plus sustaining capital requirements. C1 cash costs are described above. AISC is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

7. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
8. The valuation of approximately ~US$3 billion for Teck’s 90% interest prior to the Sumitomo transaction is based on a transaction value of US$1 billion comprising an earn-in contribution of US$800 million and assumed contingent consideration proceeds with a present value of approximately US$200 million. The undiscounted contingent consideration is estimated at US$300 million and comprises: (a) US$50 million relating to achieving the mill throughput optimization target as described in Note 1 on the “QB2 Transaction Terms” slide, assumed to be received in 2024; and (b) 8% of the net present value of the QB3 expansion at sanction, assuming an expansion sanctioned in 2024 which doubles QB2 throughput with further tailings facility construction deferred. At a real copper price of US$3.00/lb, the payment is estimated at approximately US$250 million. Using a real discount rate of 8%, the present value of the contingent consideration, based on the above assumptions is estimated at approximately US$200 million. This estimate is based on a number of significant assumptions in addition to those described above. There can be no assurance that the contingent consideration will approximate the amounts outlined above, or that it will be received at all.
9. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo. Does not include contingent consideration.

Slide 23: Prudent Balance Sheet Management Through QB2

1. Assumes project finance facility available in Q2 2019, and US$1.2 billion of Sumitomo contributions associated with purchase price spent before first draw. Thereafter, project finance facility used to fund all capital costs until target debt : capital ratio achieved on a cumulative basis, after which point project finance and equity contributions are made ratably based on this same debt : capital ratio.
2. Liquidity is as at April 22, 2019 and includes $2.5 billion in cash, of which $1.3 billion is in Chile for the development of our QB2 project.
3. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
4. On a go forward basis from January 1, 2019. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.
Notes - Appendix: Quebrada Blanca

Slide 24: Increasing Teck’s Returns on QB2
2. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.
3. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
4. On a go forward basis from January 1, 2019. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.
5. Assumes project finance facility available in Q2 2019, and US$1.2 billion of Sumitomo contributions associated with purchase price spent before first draw. Thereafter, project finance facility used to fund all capital costs until target debt : capital ratio achieved on a cumulative basis, after which point project finance and equity contributions are made ratably based on this same debt : capital ratio.

Slide 25: QB2’s Competitive Cost Position
2. Based on first five full years of copper equivalent production. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
3. C1 cash costs are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
4. All-in sustaining costs (AISC) are calculated as C1 cash costs after by-product credits plus sustaining capital requirements. C1 cash costs are described above. AISC is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 26: Vast, Long Life Deposit at QB
1. Resources figures as at November 30, 2018. Resources are reported separately from, and do not include that portion of resources classified as reserves. See “QB2 Reserves and Resources Comparison” slide for further details.

Slide 27: QB3 – Long-Term Growth
1. DDH-756 @176.6m, Field of view 2cm.

Slide 30: QB2 Project Economics Comparison
1. All metrics on 100% basis and assume US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver unless otherwise stated. NPV, IRR and payback on after-tax basis.
2. Life of Mine annual average figures exclude the first and last partial years of operations.
3. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
4. C1 cash costs are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
5. All-in sustaining costs (AISC) are calculated as C1 cash costs after by-product credits plus sustaining capital requirements. C1 cash costs are described above. AISC is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
6. Payback from first production.
7. Based on go-forward cash flow from January 1, 2017. Based on all equity funding structure.
8. Based on go-forward cash flow from January 1, 2019. Based on optimized funding structure.
10. Includes impact of US$2.5 billion project financing. Does not consider contingent consideration.
11. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
Notes - Appendix: Quebrada Blanca

Slide 31: QB2 Reserves and Resources Comparison
1. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US$13.39/t over the planned life of mine. The life-of-mine strip ratio is 0.41.
2. Both mineral resource and mineral reserve estimates assume long-term commodity prices of US$3.00/lb Cu, US$9.40/lb Mo and US$18.00/oz Ag and other assumptions that include: pit slope angles of 30–44º, variable metallurgical recoveries that average approximately 91% for Cu and 74% for Mo and operational costs supported by the Feasibility Study as revised and updated.
3. Mineral resources are reported using a NSR cut-off of US$11.00/t and include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.
4. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US$18.95/t over the planned life of mine. The life-of-mine strip ratio is 0.70.
5. Mineral resources are reported using a NSR cut-off of US$11.00/t outside of the reserves pit. Mineral resources include inferred resources within the reserves pit at a US$ 18.95/t NSR cut-off and also include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.

Slide 33: Quebrada Blanca Accounting Treatment
1. Sumitomo Metal Mining Co. Ltd. and Sumitomo Corporation are collectively referred to as Sumitomo.
Strategy and Overview
Consistent Long-Term Strategy

Diversification
Long life assets
Low cost
Appropriate scale
Low risk jurisdictions
Attractive Portfolio of Long-Life Assets
Low risk jurisdictions

### QB2 Capital Costs Before Escalation

- **QB2 Capital Cost**: $4,739
- **Contribution from Sumitomo**: $(1,200)
- **Project Finance**: $2,500
- **Remaining Sumitomo Equity**: $(346)
- **Remaining Teck Equity**: $693

---

¹ Guidance assumes that the real price of copper will average $3.50 per pound and that the real price of zinc will average $1.05 per pound.

² Includes processing plant and underground transportation improvements.

³ Includes ongoing capital for mill, tailings and environmental improvements.

4 Assumes an average realized price of copper of $6.50 per pound for the year.

5 Capitalized stripping includes sustaining and major enhancement capital costs.

6 Includes the option value associated with the issue of green bonds.

Notes: Appendix – Strategy and Overview

Slide 41: Global Customer Base
1. Gross profit before depreciation and amortization is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 43: Disciplined Approach to M&A
1. Carmen de Andacollo gold stream transaction occurred in USD at US$162 million.
4. Teena transaction occurred in AUD at A$10.6 million.
5. San Nicolás transaction occurred in USD at US$50 million.
6. QB2 Partnership (sale of 30% interest of project to Sumitomo; SMM and SC) for total consideration of US$1.2 billion, including US$800 million earn-in and US$400 million matching contribution; converted at FX of 1.34 on March 29, 2019
7. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 44: Production Guidance
2. Metal contained in concentrate.
3. We include 100% of production and sales from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% and 21.3% of production and sales from Antamina and Fort Hills, respectively, representing our proportionate ownership interest in these operations.
4. Copper production includes cathode production at Quebrada Blanca and Carmen de Andacollo.
5. Total zinc includes co-product zinc production from our copper business unit.
7. Results for 2018 are effective from June 1, 2018.
8. The 2020–2022 bitumen production guidance does not include potential near-term debottlenecking opportunities. See energy business unit in Q4 2018 press release for more information.

Slide 45: Sales and Unit Cost Guidance
2. Steelmaking coal unit costs are reported in Canadian dollars per tonne. Adjusted site cost of sales includes site costs, transport costs, and other and does not include deferred stripping or capital expenditures. Adjusted site cost of sales is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
3. Copper unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Total cash unit costs are before co- and by-product margins. Copper net cash costs are after by-product margins and include adjusted cash cost of sales, smelter processing charges and cash margin for by-products including co-products. Assumes a zinc price of US$1.30 per pound, a molybdenum price of US$12 per pound, a silver price of US$16.00 per ounce, a gold price of US$1,250 per ounce and a Canadian/U.S. dollar exchange rate of $1.30. See “Non-GAAP Financial Measures” slides.
4. Zinc unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Total cash unit costs are before co- and by-product margins. Zinc net cash costs are after by-product margins and are mine costs including adjusted cash cost of sales, smelter processing charges and cash margin for by-products. Assumes a lead price of US$1.00 per pound, a silver price of US$16.00 per ounce and a Canadian/U.S. dollar exchange rate of $1.30. By-products include both by-products and co-products. See “Non-GAAP Financial Measures” slides.
5. Bitumen unit costs are reported in Canadian dollars per barrel. Adjusted operating costs represent costs for the Fort Hills mining and processing operations and do not include the cost of diluent, transportation, storage and blending. See “Non-GAAP Financial Measures” slides.
Notes: Appendix - Strategy and Overview

Slide 46: Capital Expenditures Guidance
2. For steelmaking coal, sustaining capital includes Teck’s share of water treatment charges of $57 million in 2018. Sustaining capital guidance includes Teck’s share of water treatment charges related to the Elk Valley Water Quality Plan, which are approximately $235 million in 2019. Steelmaking coal major enhancement capital guidance includes $175 million relating to the facility upgrade at Neptune Bulk Terminals that will be funded by Teck.
3. For copper, new mine development guidance for 2019 includes QB3 scoping, Zafranal, San Nicolás and Galore Creek.
4. Total estimated SMM and SC contributions are $1.77 billion. The difference will be in cash at December 31, 2019. Total estimated contributions are US$1.2 billion as disclosed and US$142 million for their share of expenditures from January 1, 2019 to March 31, 2019.
5. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
6. On a go forward basis from January 1, 2019. Assumes US$2.5 billion in project finance loans without deduction of fees and interest during construction, and US$1.2 billion contribution from Sumitomo.

Slide 47: Commodity Price Leverage
2. All production estimates are subject to change based on market and operating conditions.
3. The effect on our profit attributable to shareholders and on EBITDA of commodity price and exchange rate movements will vary from quarter to quarter depending on sales volumes. Our estimate of the sensitivity of profit and EBITDA to changes in the U.S. dollar exchange rate is sensitive to commodity price assumptions. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
4. Zinc includes 307,500 tonnes of refined zinc and 635,000 tonnes of zinc contained in concentrate.
5. Bitumen volumes from our energy business unit.
6. Our WTI oil price sensitivity takes into account our interest in Fort Hills for respective change in revenue, partially offset by the effect of the change in diluent purchase costs as well as the effect on the change in operating costs across our business units, as our operations use a significant amount of diesel fuel.

Slide 48: Tax-Efficient Earnings In Canada
1. As at December 31, 2018.

Slide 49: Share Structure & Principal Shareholders
1. As at December 31, 2018.
Sustainability
Sustainability Strategy

• Strong sustainability performance enabled by a strategy built around developing opportunities and managing risks

• Implementing a sustainability strategy with short-term, five-year goals and long-term goals stretching out to 2030

Goals cover the six areas of focus representing the most significant sustainability issues and opportunities facing our company:

- Community
- Water
- Our People
- Biodiversity
- Energy and Climate Change
- Air
## Teck’s Performance on Top ESG Ratings

</tbody>
</table>
Why Sustainability Matters

Driving Growth and Managing Risk

• Reduced risk of operations disruption
• Efficient project and permit approvals
• Meet rising supply chain and societal expectations
• Employee retention and recruitment
• Increased access to capital at a lower cost
• Increased cost savings and productivity
• Higher financial returns
• Brand value and reputation
Health and Safety Performance

- **Safety performance in 2018**
  - 28% reduction in High-Potential Incidents
  - 21% decrease in Lost-Time Injury Frequency

- Conducted **Courageous Safety Leadership** training with 97% of employees

- Two fatalities in 2018: one at Fording River Operations and one at Elkview Operations. Carried out **in-depth investigations into the incidents** to learn as much as possible and implement measures to prevent a reoccurrence

![Chart showing incident frequency over years](chart.png)

62% reduction in High-Potential Incident Frequency rate over past four years
Leading Practices in Tailings Management

**Transparency**

- Details on all tailings facilities available online
- Dam Safety Inspections publicly available on our website

**Collaboration**

- Actively engaged on the International Council on Mining and Metals (ICMM) Tailings Position Statement and Governance Framework
- Participant in ICMM’s leadership work on an aspirational goal of reducing reliance on conventional tailings practices
Reducing Freshwater Use

- Water recycled average of 3 times at mining operations in 2018
- Target to reduce freshwater use at Chilean operations by 15% by 2020
- Desalinated seawater for Quebrada Blanca 2 project in place of freshwater; 26.5 million m³ per year

Teck in top 10 of 50+ companies ranked by DJSI

DJSI Water Related Risks Assessment: 2018

Percentile Rankings

Teck (84th percentile)

Related SASB Metric: EM-MM-140a.1 | Link to Data
Low Cost, Low Carbon Producer

- Among world’s lowest GHG intensity for steelmaking coal and copper production

- Fort Hills – one of the lowest carbon intensities among North American oil sands producers on a wells-to-wheels basis

- Progressive carbon pricing already built into majority of business

- Well-positioned for a low-carbon economy

GHG Emissions Intensity Ranges Among ICMM Members

Teck in bottom quartile for miners

1 kgCO₂e per tonne of product
Taking Action on Climate Change

• Goal to reduce GHG emissions by 450,000 tonnes by 2030 and have already reduced 289,000 tonnes of emissions as a result of projects implemented since 2011

• Advocating for climate action – member of Carbon Pricing Leadership Coalition

• Releasing second Climate Action and Portfolio Resilience report in 2019, which is structured to align with the recommendations from the Task Force on Climate Related Financial Disclosure

Teck in top 5 of 50+ companies ranked by DJSI

60
Lower-Risk Jurisdictions, Comprehensive Assessments

- All operations in countries with well-developed mining industries: Canada, United States, Chile, Peru
- Robust regulatory regimes and rule of law in place
- Strong foundation for protection of human rights
- Human rights assessments conducted at all operations in 2018

Teck in top 5 of 50+ companies ranked by DJSI

DJSI Human Rights Assessment: 2018 Percentile Rankings

Teck (95th percentile)
Strengthening Relationships with Indigenous Peoples

- Agreements in place at all mining operations within or adjacent to Indigenous Peoples’ territories
- Achieved agreements with all Indigenous Communities near the QB2 project
- Achieved agreements with 14 out of 14 potentially affected Indigenous groups near our Frontier project
- Working with UN Women in Chile to advance economic opportunities for Indigenous women

Related SASB Metric: EM-MM-210a.3 | [Link to Data]
Employee Relations and Diversity

• 57% of our employees are unionized and there were zero strikes in 2018

• Collective agreements at Quebrada Blanca, Line Creek and Carmen de Andacollo operations set to expire in 2019; collective agreement at Antamina currently expired

• Focused on strengthening diversity, with women making up 26% of new hires in 2018

• In 2018, 9% of total hires self-identified as Indigenous from our Red Dog, Highland Valley Copper and steelmaking coal operations in the Elk Valley

Related SASB Metrics: EM-MM-310a.1 | Link to Data

Changing Landscape in the Mining Sector

While technology has been a driving force of improvement in mining, the basic operating system has remained unchanged for decades.

In most industries, companies that move slowly to seize digital and analytics opportunities are falling behind or even disappearing.

With the expansion in analytics, automation and digital tools, we can now transform mining, adopt a manufacturing model to unlock significant value and competitive advantage.

Teck is pursuing a transformation of our business – called RACE21™ with some elements already underway.
Teck is Actively Pursuing a Transformation Of Our Business Through Technology

RACE21™

Renew
Modernize Teck’s technology foundation

Automate
Accelerate and scale autonomy program

Connect
Develop digital platform for sensing and analytics

Empower
Design future operating model to empower our employees
Our conviction is that the potential exists to transform mining, adopt a manufacturing model to unlock significant economic value and competitive advantage.
Why Pursue a Technology Transformation?
Technology leadership could create multiple opportunities

INTERNALLY
A new operating model and capabilities to extract more value from the long-life resources Teck owns for a more sustainable future

WITHIN THE INDUSTRY
A source of strategic advantage to identify undervalued assets, and attract the best partners

BEYOND THE MINING INDUSTRY
We could leverage our capabilities to explore opportunities in the broader global innovation ecosystem
Significant Value To Be Captured

Capacity Reductions in China Support Pricing

Steel Capacity Reduction Achieved\(^1\)

- 2016-2020 target: 140 Mt
- 2016 actual: 65 Mt
- 2017 actual: 50 Mt
- 2018 actual: 35 Mt
- Remaining: 0 Mt

Coal Capacity Reduction Achieved\(^1\)

- 2016-2020 target: 800 Mt
- 2016 actual: 290 Mt
- 2017 actual: 250 Mt
- 2018 actual: 270 Mt
- Remaining: 0 Mt

- Steel: Profitable steel industry supports raw materials pricing
- Coal: Capacity reductions support seaborne imports
Large Users in China Increasing Imports
~2/3 of China crude steel produced on coast; projects support imports

Seaborne Coking Coal Imports¹

- **Liusteel Fangcheng Project**
  - Greenfield project
  - Capacity: Phase 1 crude steel ~10 Mt
  - Status: Construction started in 2017

- **Baowu Zhanjiang Plant**
  - Expansion
  - Capacity: crude steel 3.6 Mt (phase 2)
  - Status: Construction started in 2019

- **Zongheng Fengnan Project**
  - Inland plant relocating to coastal area
  - Capacity: crude steel 8 Mt
  - Status: Construction started in 2017; completion in 2021

- **HBIS Laoting Project**
  - Inland plant relocating to coastal area
  - Capacity: crude steel 20 Mt
  - Status: Construction started in 2017; completion in 2020

- **Shougang Jingtang Plant**
  - Expansion
  - Capacity: crude steel 9.4 Mt (phase 2)
  - Status: Construction started in 2015; completion in H1 2019

- **Shandong Steel Rizhao Project**
  - Greenfield project
  - Capacity: crude steel 8.5 Mt
  - Status: Construction started in 2015; BF #1 completed in 2017; BF #2 completion in 2019

- **Baowu Yancheng Project**
  - Inland plant relocating to coastal area
  - Capacity: crude steel 20 Mt
  - Status: Construction to start in 2019

1. Data from China Steel Imports: 2010-2018.
Chinese Scrap Use to Increase Slowly
EAF share in crude steel production to recover only to 2016’s level

China’s Scrap Ratio was ~1/2 of World Average in 2017\(^1\)

China Steel Use By Sector (2000-2017)\(^2\)

Steelmaking Coal Supply / Demand Balance

Coal gap is developing unless projects progress

Supply & Demand from Existing Mines¹ (Million Tonnes)

- ~30-55 Mt needed from restarts and projects by 2024

Includes:
- Existing mines: expansion (~35Mt) and depletion (~40Mt)
- Expansions: Australia (~50%), Indonesia/Russia/Mozambique/Canada/ROW (~10% each)
- Depletion: Australia (~50%), USA (~30%), ROW (~20%)

Possible Restarts and Projects¹ (Million Tonnes)

Includes:
- Highly probable projects: Russia (~45%), Australia (~30%), USA (~25%)
- Possible restarts: Australia (~60%), Canada (~20%), ROW (~20%)
- Probable projects: Australia (~45%), Canada (~35%), ROW (~20%)
2nd Largest Seaborne Steelmaking Coal Supplier
Competitively positioned to supply steel producers worldwide

Sales to India exceeded China from 2018
An Integrated Long Life Coal Business

- 940 million tonnes of reserves support ~27 Mt of production for many years
- Geographically concentrated in the Elk Valley
- Established infrastructure and capacity with mines, railways and terminals
Long Life With Growth Potential in Steelmaking Coal

26.0-26.5 million tonnes in 2019
• Advancing production in new areas to fully offset Coal Mountain closure

27-28 million tonnes in 2020 and beyond
• Investment in plant throughput capacity at Elkview to capitalize on lower strip ratio beginning in 2020

+1.8 million tonne upside potential in 2020-2027
• Mackenzie Redcap under evaluation

Investing in low capital intensity production capacity to maximize near term profit generating potential.
Maximizing Cash Flow in Any Market in Steelmaking Coal

High Price Environment
• Production focus to capture high margins and maximize free cash flow
  – Utilize higher cost equipment, contractor labour, internal overtime, & intersite processing to increase production

Low Price Environment
• Cost focus to protect margins and maximize free cash flow
  – Parking higher cost equipment, reduced contractor trades and mining reliance, hiring freeze, lower material movement
  – Emphasis on cost reduction initiatives

Production maximizing initiatives generated ~$135 million in additional free cash flow in 2018.
Strip ratio increase planned in 2019 to advance clean coal expansion
• Future strip ratio on par with historical average

Elkview Operations driving the increase in clean coal strip ratio to advance ability to produce at 9 million tonne rate by 2021
• Elkview strip ratio drops from 11.8 in 2019 to 6.9 by 2023
  - 2018-2029 average of 9.2
Maintaining historical dollar per tonne sustaining investment levels

2010-2016: Average spend of ~$6 per tonne
- Reinvestment in 5 shovels, 50+ haul trucks

2017-2023: Average spend of ~$6 per tonne
- Reinvestment in equipment fleets and technology to increase mining productivity and processing capacity

Long term run rate for sustaining capital is ~$6 per tonne.
Investing In Production Capacity in Steelmaking Coal

Major enhancement projects increasing long-term production capacity:
- SWIFT at Fording River Operations
- Baldy Ridge Extension at Elkview Operations
- 9 Million project at Elkview Operations
- Mackenzie Redcap (MKRC) at Cardinal River Operations under evaluation

2010-2016: Average spend of ~$160 million² per year
- Increased production capacity by ~3.5 million tonnes

2017-2023: Average spend of ~$134 million² per year
- Increasing production capacity for 2020-2026 production by ~3 million tonnes per year
  - Increasing plant capacity at Elkview Operations (EVO 9M)
  - Possible development of Mackenzie Redcap at Cardinal River Operations

---

Major Enhancement Capital Expenditures¹,²,³ ($ million)

- 2017-2023 Avg
Progress on Reducing Long-Term Water Treatment Costs

Saturated Rock Fills (SRF) demonstrated to be a direct replacement for current Active Water Treatment Facilities (AWTF), subject to regulatory approval

SRF strategy could reduce water capital to $600 million to $650 million in 2018-2022¹
- SRF capital costs ~20% of current permitted treatment option (AWTF)
- SRF operating costs are ~50% of AWTF

Currently permitting second phase of Elkview’s SRF to 20,000 m³ per day and advancing first pilot at Fording River
SRF permitted would reduce water capital to $600 million to $650 million\textsuperscript{3}
- 1 LCO\textsuperscript{4} AWTF completed
- EVO\textsuperscript{4} SRF
- FRO\textsuperscript{4} AWTF–South
- Replacing FRO AWTF-North with SRF capacity

Previous guidance of $850 million to $900 million
- 1 LCO AWTF completed
- Construction of 3 AWTFs
  - EVO AWTF
  - FRO AWTF-North
  - FRO AWTF-South

AWTF revised requires ~$250 million in additional capital
- Needed if SRF strategy is not permitted
- Design scope change at EVO AWTF
- Increased design capacity at FRO AWTF–North
Teck’s Pricing Mechanisms
Coal sales book generally moves with the market

Sales Mix
• ~40% quarterly contract price
• ~60% shorter than quarterly pricing mechanisms (including “spot”)

Product Mix
• ~75% of production is high-quality HCC
• ~25% is a combination of SHCC, SSCC, PCI and a small amount of thermal

Key Factors Impacting Teck’s Average Realized Prices
• Variations in our product mix
• Timing of sales
• Direction and underlying volatility of the daily price assessments
• Spreads between various qualities of steelmaking coal
• Arbitrage between FOB Australia and CFR China pricing

Index Linked Sales
• Quarterly contract sales index linked
• Contract sales index linked
• Contract sales with index fallback
• Spot sales index linked

Fixed Price Sales
• Contract sales spot priced
• Contract sales with index fallback
• Spot sales with fixed price
Quality and Basis Spreads
Impact Teck’s average realized steelmaking coal prices

HCC / SHCC Prices and Spread$^1$

HCC FOB / CFR Prices and Spread$^2$
### Westshore Terminals
- Current capacity 33 Mtpa
- ~$275 million upgrade to 35 Mtpa by 2019
- Teck is largest customer at 19 Mtpa
- Contract expires March 31, 2021

### Neptune Coal Terminal
- Teck / Canpotex Joint Venture
- Current capacity 12.5 Mtpa
- ~$510 million investment to upgrade and rejuvenate
- Planned growth to > 18.5 Mtpa

### Ridley Terminals
- Current capacity 16 Mtpa
- Teck contracted at 3 Mtpa
- Planned growth to > 20 Mtpa

2. Source: Wood Mackenzie, AME.

Slide 83: Steelmaking Coal Supply Growth Forecast
1. Source: Wood Mackenzie. Demand forecasts include disruption allowance that is based on the difference between Wood Mackenzie’s Q4 forecast and actual imports over the period 2015 to 2017.
2. Source: Wood Mackenzie, AME.

Slide 84: Steelmaking Coal Supply / Demand Balance
1. Source: Wood Mackenzie, AME. High case demand is based on AME for India’s imports and Wood Mackenzie for imports by other countries. Exports include disruption allowance that is based on the difference between Wood Mackenzie’s Q4 forecast and actual exports over the period 2015 to 2017.
2. Source: Wood Mackenzie, Seaport Global Securities LLC.

Slide 85: Long Life with Growth Potential in Steelmaking Coal
1. Subject to market conditions and obtaining relevant permits.

Slide 88: Maximizing Cash Flow in Any Market in Steelmaking Coal
1. Free cash flow is a non-GAAP measure. See "Non-GAAP Financial Measures" slides.
2. Assumes cost of sales of $63/tonne for 2019. Effective January 1, 2019, the IFRS 16 accounting standard change required the capitalization of equipment leases historically included in cost of sales. This policy change is expected to decrease cost of sales by ~$2/tonne, therefore a cost of sales figure of $65/tonne should be used for comparison to historical figures.

Slide 89: Setting Up for Strong Long-Term Cash Flows in Steelmaking Coal
1. Reflects weighted average strip ratio of all coal operations. Cardinal River Operations includes the Mackenzie Redcap project.

Slide 90: Reinvesting to Maintain Productivities and Manage Costs in Steelmaking Coal
1. Historical spend has not been adjusted for inflation or foreign exchange. 2019-2023 assumes annualized average production of 28.6 million tonnes and excludes the impact of the change in accounting for leases under IFRS 16. All dollars referenced are Teck’s portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of sustaining capital relating to water treatment and Neptune Terminal. Water capital is addressed in “Progress on Reducing Long-Term Water Treatment Costs” slide.

Slide 91: Investing In Production Capacity in Steelmaking Coal
1. Historical spend has not been adjusted for inflation or foreign exchange. 2019-2023 excludes the impact of the change in accounting for leases under IFRS 16.
2. All dollars referenced are Teck’s portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of major enhancement capital relating to the Neptune Facility Upgrade.
3. Swift, Baldy Ridge Extension, Elkview 9M and Mackenzie Redcap (MKRC) project spending in 2019 is noted to illustrate the peak in major enhancement spending. All projects have spending prior and subsequent to 2019.
Notes: Appendix – Steelmaking Coal

Slide 92: Progress on Reducing Long-Term Water Treatment Costs
1. Water capital figures present total spending, a portion of which will be paid by POSCAN joint venture partner. Future POSCAN amounts are not yet determinable as the percentage varies year-to-year with selenium load factors which are measured annually. For further information, please see “Water Treatment Capital” slide.

Slide 93: Water Treatment Capital
1. Water capital figures present total spending, a portion of which will be paid by POSCAN joint venture partner. Future POSCAN amounts are not yet determinable as the percentage varies year-to-year with selenium load factors which are measured annually.
2. All capital scenarios exclude $40M in research and development for construction of the SRF full scale trial substantially completed in 2017 and commissioned at Elkview Operations in early 2018. LCO AWTF capital spend in 2018 was $22M for completion of the Advanced Oxidation Process. Dollars are unadjusted for the POSCAN joint venture portion.
3. Best case replaces construction of 2 of the 3 AWTF’s identified in previous guidance with SRFs at 20% of construction costs. Best case includes ~$130M to progress construction of replaced AWTFs in 2018 and 2019 until SRF strategy is permitted.
4. LCO stands for Line Creek Operations, FRO stands for Fording River Operations, and EVO stands for Elkview Operations.

Slide 95: Quality and Basis Spreads
1. HCC price is average of the Argus Premium HCC Low Vol, Platts Premium Low Vol and TSI Premium Coking Coal assessments, all FOB Australia and in US dollars. SHCC price is average of the Platts HCC 64 Mid Vol and TSI HCC assessments, all FOB Australia and in US dollars. Source: Argus, Platts, TSI. Plotted to April 30, 2019.
Copper Business Unit & Markets
Global Copper Mine Production Increasing Slowly

- Mine production set to increase 1.8 Mt by 2023, including:
  - Glencore’s African mine restarts: 400 kmt
  - Cobre Panama: 330 kmt
  - Escondida: 390 kmt
  - Quellaveco: 350 kmt

Realised TC/RC

0¢ 10¢ 20¢ 30¢ 40¢
Rapid Growth in Chinese Copper Smelter Capacity
Limited domestic mine projects and lots of delays

Chinese Copper Mine Growth

- 2019: 48 kt
- 2020: 62 kt
- 2010 - 2022: 212 kt

+2.8 Mt of Smelting Projects in the Pipeline

- 2018/2019: 1,142 kt
- 2020: 981 kt
- 2020 - 2022: 739 kt
Copper Supply
Mine production rising and scrap availability falling

Sanctioned Projects Since 2017

(Thousand tonnes)

New mines commissioned will add 2.3 million tonnes from 2017-2025.

China Copper Scrap Imports Decline

(2013-2018)

Chinese Imports Shift to Concentrates

(2013-2018)
Copper Metal Stocks
Better than expected demand; smelter disruptions

- Production cuts at Asian smelters combined with lower scrap availability contributed to a drawdown in cathode stocks
- Exchange stocks have fallen 425,000 tonnes since March 2018, now equivalent to just over one week’s global consumption.
- In mid-March 2019 stocks reached lowest level since late 2014. Including bonded stocks, lowest since 2009
- Stocks were building in China, but have fallen in last four weeks. Backwardation in copper starting to draw stocks onto the LME, up 100,000 tonnes in last four weeks
Copper Supply / Demand Balance
Projects available to fill low demand scenario gap

Probable Projects Sufficient Only to Fill Low Gap Scenario
(Thousand tonnes)

Existing and Fully Committed Supply
(Thousand tonnes)

Assumed average growth to 2024:
• High Demand (2.7%): 3.1 million tonne gap
• Base Demand (2.0%): 2.0 million tonne gap
• Low Demand (1.5%): 1.0 million tonne gap
# Long Life and Stable Assets in Copper

## Antamina
- C1 costs in the 1st quartile¹
- Record combined concentrate production in 2018
- Lower zinc in 2019, increasing in 2020
- Debottlenecking study in progress

## Highland Valley
- Copper production rising with higher grades and recovery
- Technology focus with autonomous haulage and shovel-based ore sorting
- D3 mill project complete in Q2 2019, ahead of schedule and under budget

## Carmen de Andacollo
- Consistent near term production profile
- Sizer project in commissioning
- Focus on water reduction and effectively managing dust

## Quebrada Blanca
- Mining equipment and workforce successfully transitioned to QB2
- Strong platform for QB2 start-up and future operations
- Focus on labour efficiency and productivity

---

1. ¹ Source: Company Report

**FOUNDATION OF STABLE OPERATIONS**
Cost Discipline and Improvement Focus in Copper

Operating expenses & productivity

• Cross site sharing in asset management continues to improve availabilities and reduce costs
• Robust continuous improvement pipeline - key driver of margins

Supply management at Teck

• Leveraging Teck-wide spending
• 7 primary categories started in 2010 with >$50 million in sustained annual savings
• 6 more categories added in 2018 - Additional $30 million in annual savings
• China sourcing initiative

Focused investment priorities in Copper

• Numerous projects finishing in 2019 and early 2020 - D3 Ball Mill at HVC, QB1 water management
• Near term spending driven by tailings facility cost at Antamina – declining in 2022
• Long-term sustaining capex in copper expected at $125 million, excluding QB2

Copper Sustaining Capital Profile (C$M)

- 108
Major Growth Projects in Copper
Setting up major growth projects in Chile for long-term success

Quebrada Blanca
- QB2: 316 kt of CuEq production for first 5 years\(^1\)
  - Increases copper production by ~60% with low strip ratio and AISC of US$1.38/lb copper\(^2\)
  - Early debottlenecking focus to unlock upside
- QB3: Scoping Study on expansion potential in progress
  - Mineral resource supports studying 3 or 4 times milling rate with continued low strip ratio
  - Lower capital intensity, with potential to more than double production and be a top 5 global producer

NuevaUnión
- Feasibility study in progress
  - Continued focus on reduced environmental footprint
  - Advancing innovative designs including rope conveyors and high pressure grinding roll technology
- Proactive, participatory community engagement approach
  - EIA submission targeted for H2 2019
## Major Extension Projects in Copper
### Strong brownfield pipeline for value creation

### Antamina
- **Debottlenecking and extension studies ongoing**
  - Increase mill throughput >15%
  - Relocation of crushing and conveying system
  - Increasing waste rock and tailings storage capacity

### HVC 2040
- **Advancing HVC Mine Life Extension Feasibility Study**
  - Targeting extension ~12 years
  - Increase mill throughput >20%
- **Leverage recent capital and technology projects**
  - Mill Optimization Project (2014) and D3 Ball Mill
  - Ore sorting and automation

---

**Antamina**

Slide 101: Global Copper Mine Production Increasing Slowly

Slide 102: Copper Disruptions

Slide 103: Rapid Growth in Chinese Copper Smelter Capacity
1. Includes mine projects with copper capacity >10 ktpa. Source: BGRIMM.
2. Source: CRU, BGRIMM, SMM, Teck.

Slide 104: Copper Supply
2. Source: Wood Mackenzie, GTIS, SMM.

Slide 105: Copper Metal Stocks
1. Source: LME, Comex, SHFE, SMM

Slide 106: Copper Supply / Demand Balance
1. Source: Wood Mackenzie, CRU, ICA, Yale, Teck. Low Demand based on Wood Mackenzie forecast demand outlook. Base Case Demand based on Teck copper demand model. High Demand based on combination of ICA study done for long term Copper Demand and a Yale University study done based on IEA forecasts for 2DS on Climate reduction goals.
2. Source: Wood Mackenzie, CRU, ICA, Yale, Teck. Forecasts based on projects from Wood Mackenzie Probable list of projects from Q4 2018 flexed at their historic rates of probable projects entering production (70% of Probable Brownfields, 50% of Probable Greenfield projects and an allowance for unidentified mine extensions based on historic precedent that 20% of capacity projected to close will stay open through such extensions).

Slide 107: Long Life and Stable Assets in Copper

Slide 109: Major Growth Projects in Copper
1. Copper equivalent production calculated for the first 5 full years of production assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
2. All-in sustaining costs (AISC) are calculated as C1 cash costs after by-product credits plus sustaining capital requirements. C1 cash costs are calculated after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit cost, C1 cash cost and AISC are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
Zinc
Business Unit & Markets
Environmental Policy Decreasing Chinese Production

Chinese Mine Production Down 2.3% in 2018

Chinese Refined Production Down 9% in 2018

1. Chinese Mine Production Down 2.3% in 2018
2. Chinese Refined Production Down 9% in 2018
Increasing Demand for Zinc Metal Imports

De-stocking Continues Chinese Stocks at Record Lows\(^1,2\)

Smelter cutbacks lead to drawdown of warehouse inventories – now record low;
If China does import 1.7 Mt of concentrates, still requires 1.5 Mt of metal imports

More Imported Zinc Metal Required to Fill the Gap\(^3\)
Teck originally forecast global mine production would grow 7.9% or over 800,000 tonnes in 2018
- Due to start up of large mines, Dugald River, Gamsberg, New Century and restarts by Glencore

Global mine production in 2018 missed Teck’s forecast by almost 600,000 tonnes
- Slow or delayed start-ups at New Century, Gamsberg, and several smaller mines
- China originally expected to increase 250,000 tonnes contained in 2018, but now estimated to be down 150,000 tonnes contained in 2018

Today, Teck forecasts an 8.1% increase in mine production in 2019, but significant risks continue
- Mine guidance has already decreased around 120 thousand tonnes in Q1 2019
- Chinese environmental inspections continue at domestic mines and may restrict production into H2 2019
Chinese Zinc Mine Projects Delayed
Impacted by inspections and low zinc ore grades

Estimated Chinese Zinc Mine Growth Rarely Achieved

Zinc Ore Grades Falling at Chinese Mines

---

1. Estimated Chinese Zinc Mine Growth Rarely Achieved

3. Zinc Ore Grades Falling at Chinese Mines

---
Zinc Metal Stocks
Consecutive deficits decreasing zinc inventories

• Deficits in past 5 years have driven down stocks
• LME refined zinc stocks have decreased 48,000 tonnes year-to-date in 2019
• Less than 80,000 tonnes of refined zinc remaining on LME
• SHFE stocks have increased 59,000 tonnes year-to-date in 2019
• Decreased Chinese refined production is increasing demand for refined imports into China
• Smelter cuts announced in Q1 2019:
  – Elektrozinc Russia (80,000 tonnes): permanently closed due to safety infractions following a fire at the smelter
  – Skorpion: closing for 5 weeks, strike at mine reduces oxide stockpiles
  – Queensland Townsville zinc smelter: at risk due to flooded rail lines
Zinc Supply / Demand Balance
Zinc mine production peaks in 2021

Existing and Fully Committed Supply\(^1\)
(Thousand tonnes)

- Refined Production
- Low Demand
- High Demand

Assumed average growth to 2024:
- High Demand (2.0%): 2.0 million tonne gap
- Base Demand (1.6%): 1.7 million tonne gap
- Low Demand (1.2%): 1.0 million tonne gap

Export Capacity Needed To Meet Global Demand

Near term (2019-2021):
- Canadian export capacity lagging
- Reliant on rail (400-500 Kbpdp)

Pipeline development progressing:
- Enbridge: 370 Kbpdp (2020-2021)
- Keystone XL: 800 Kbpdp (2021-2022)
- TMX: 600 Kbpdp (2022)

Longer term:
- Global heavy refining capacity increase
- US, India and China largest markets

Existing pipeline/rail sufficient to meet takeaway capacity through 2023

1. Adjusted operating costs is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slide.
2. Life of Mine operating cost estimate represents the Operator’s estimate of costs for the Fort Hills mining and processing operations and do not include the cost of diluent, transportation, storage or blending. Estimates of Fort Hills operating costs could be negatively affected by delays in or unexpected events involving the ramp up of production. Steady state operations assumes full production of ~90% of nameplate capacity of 194,000 barrels per day.
3. Sustaining cost estimates represent the Operator’s estimate of sustaining costs for the Fort Hills mining and processing operations. Estimates of Fort Hills sustaining costs could be negatively affected by delays in or unexpected events involving the ramp up of production. Fort Hills has a >40 year mine life.
Energy Business Unit Modelling
Operating Netback – Q1 2019

- Operating netback is a non-GAAP measure, presented on a product and sales barrel basis on page 23 of the Q1 2019 news release.
- Derived from the Energy segmented information (P&L), after adjusting for items not directly attributable to the revenues and costs associated with production and delivery.
- Excludes depreciation, taxes and other costs not directly attributable to production and delivery of Fort Hills product.

Modelling Bitumen Price Realized – Q1 2019
Non-GAAP Financial Measure

Bitumen price realized = (blend sales\(^A\) – diluent expense\(^B\)) / bitumen bbls sold\(^C\)

A. Blend sales = blend sales @ Hardisty + blend sales @ U.S. Gulf Coast (USGC)
   = $209 per “Blended Bitumen Price Realized Reconciliation” and “Reconciliation of Energy Gross Profit”
   • Blend sales @ Hardisty = \[(\text{WTI} – \text{WTI/WCS differential @ Hardisty} – \text{negotiated differential}) \times \text{F/X rate}\] \times \text{# of barrels sold at Hardisty}
   • Blend sales @ USGC = \[(\text{WTI} – \text{WTI/WCS differential @ USGC} – \text{negotiated differential}) \times \text{F/X rate}\] \times \text{# of barrels sold at USGC}
   ***WTI/WCS differentials are not the same at Hardisty vs. USGC

B. Cost of diluent for blending:
   = Cost of diluent product + diluent transportation/storage + blending cost
   = $73 per “Cost of Sales Summary Table” and “Reconciliation of Energy Gross Profit”
   • Cost of diluent product = \[(\text{WTI} +/– \text{condensate premium/discount}) \times \text{# of diluent barrels sold in blend}\] \times \text{F/X rate}
      ***Diluent contained in a barrel of blend ranges from approximately 20% to 25% depending on the quality of blend and season (temperature)
   • Diluent transportation and blending cost includes tolls on the Norlite pipeline, East Tank Farm blending facility and diluent storage at Fort Saskatchewan

C. Bitumen barrels sold – as provided on the “Operating Netback Reconciliation”

EBITDA potential (14 Mbpd x cash margin): ~C$500M
1. EBITDA is a non-GAAP financial measure. This model is being provided to illustrate how Teck calculates EBITDA for its Energy business unit. The figures included are not forecasts of projected figures of Teck’s Energy EBITDA. See “Non-GAAP Financial Measures” slides.
Non-GAAP Financial Measures
Non-GAAP Financial Measures

EBITDA is profit attributable to shareholders before net finance expense, income and resource taxes, and depreciation and amortization. Adjusted EBITDA is EBITDA before the pre-tax effect of certain types of transactions that in our judgment are not indicative of our normal operating activities or do not necessarily occur on a regular basis. These adjustments to EBITDA highlight items and allow us and readers to analyze the rest of our results more clearly. EBITDA Margin for our operations as business units is EBITDA (as described above) for those operations and business units, divided by the revenue for the relevant operation or business unit for the year-to-date. For adjusted profit, we adjust profit attributable to shareholders as reported to remove the after-tax effect of certain types of transactions that in our judgment are not indicative of our normal operating activities or do not necessarily occur on a regular basis. Adjusted basic earnings per share is adjusted profit divided by average number of shares outstanding in the period. Adjusted diluted earnings per share is adjusted profit divided by average number of fully diluted shares in a period. We believe that disclosing these measures assist readers in understanding the ongoing cash generating potential of our business in order to provide liquidity to fund working capital needs, service outstanding debt, fund future capital expenditures and investment opportunities, and pay dividends. Free cash flow is presented to provide a means to evaluate shareholder returns. Other non-GAAP financial measures, including those comparing our results to our diversified and North American peers, are presented to help the reader compare our performance with others in our industry. The measures described above do not have standardized meanings under IFRS, may differ from those used by other issuers, and may not be comparable to such measures as reported by others. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS.

1. **Bitumen price realized** represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis. Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from the Fort Hills oil sands mining and processing operations blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar. Calculated per unit amounts may differ due to rounding.

We include unit cost information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in our industry.
