President and Chief Executive Officer

# Teck

# Caution Regarding Forward-Looking Statements

Both these slides and the accompanying oral presentations contain certain forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 and forward-looking information within the meaning of the Securities Act (Ontario) and comparable legislation in other provinces (collectively referred to herein as forward-looking statements). Forward-looking statements can be identified by the use of words such as “plans”, “expects” or “does not expect”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates” or “does not anticipate”, or “believes”, or variation of such words and phrases or state that certain actions, events or results “may”, “could”, “should”, “would”, “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Teck to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. These statements speak only as of the original date of this presentation.

These forward-looking statements include, but are not limited to, statements concerning: the potential impact of the COVID-19 on our business and operations, including our ability to continue operations at our sites; our ability to manage challenges presented by COVID-19; our long-term strategy, including but not limited to copper growth strategy; the statement Teck is poised for growth; Teck being positioned to double copper production by 2023; expectations regarding future seaborne steelmaking coals supply and demand and supply gap; our copper growth strategy and the components of that strategy, including but not limited to accelerating growth in copper, and maximizing cash flow from operations to fund copper growth; our climate action strategy and goals; Teck’s strategy ensuring we are well-positioned for changes in demand for commodities; expectation that Teck is well positioned for the low-carbon economy and goal of carbon neutrality by 2050; projected copper production growth and projected consolidated copper equivalent production and projected copper C1 costs; timing of first production from QB2; reserves and resources; Teck’s illustrative cash flows; liquidity and availability of borrowings under our credit facilities and the QB2 project finance facility; objectives and components of Teck’s capital allocation framework, including a base dividend and potential supplemental shareholder distribution and maintenance of solid investment grade metrics; all guidance appearing in this document including but not limited to the production, sales, cost, unit cost, capital expenditure, water treatment, cost reduction and other guidance; our climate action strategy and goals; all projections and forecasts about QB2 and QB3 or based on QB2 or QB3, including but not limited to life of the deposit, copper growth, C1 cash costs and AISC costs, strip ratio, throughput rate and potential to become a top five global copper producer, reserve and resource estimates, first production expectation, and all other projections included in the “Near-Term Copper Growth – QB2 Project” Appendix; all economic and other projections for our copper growth projects, including but not limited to IRR, payback period, construction period, capex and mine life; impact of commodity price change on annualized EBITDA and annualized profit; the statement that Teck is positioned to realize value from copper projects; the statement that Teck seeks to maximize shareholder returns and maintain a strong balance sheet, and maintain investment grade metrics to support strong liquidity; expected benefits and impact of our RACE21TM program; illustrative QB2 EBITDA; Teck illustrative cash flows with QB2 at full production; the statement that Teck is positioned to maximize value from copper demand growth well beyond the ramp-up of QB2; projections regarding capex, production, payback, cash costs, EBITDA, IRR and timing of our Zafrañal and San Nicolas projects, and QB3, NuevaUnión, Mesaba, Schaft Creek and Galore Creek projects; expectations for Red Dog mine life extension; the statement that Teck has several of the top next generation zinc assets; long-term sustaining capex projections for our commodities and business units; Red Dog extension project potential; expectations and forecasts for our products, business units and individual operations and projects; and forecasts for supply and demand for copper, zinc, steelmaking coal and oil; climate action goals and the expectation that we will achieve these goals; water management and treatment goals and expectation that we will achieve those goals; long term annual steelmaking coal production of 26 to 27 million tonnes, and expectations of stable long term strip ratio; the statement that steelmaking coal production is focused to capture high margins and maximize free cash flow; the statement that our steelmaking coal business unit has strong EBITDA and EBITDA margin generation potential through all cycles; the statement that steelmaking coal is competitively positioned to continue to deliver strong returns; the statement that steelmaking coal has strong margins in any market with exceptional cash generating potential; anticipated sustaining capital and average spend in steelmaking coal, and the projected long term run rate for sustaining capital in coal of \$11-13 per tonne; expected benefits of the haul truck rebuild strategy, including but not limited to the anticipated capex reduction, NPV and payback period; anticipated benefits of the Neptune facility upgrade; Teck’s coal supply chain access and capacity; expectation that Teck’s coal is optimally positioned for a decarbonizing future; Fort Hills resource estimates; expectation that operational problems are being addressed and will be resolved; expectation that Fort Hills can be a Best-in-class mineable oil sands asset; expectations and projections regarding Fort Hills financial outlook and EBITDA potential; the statement regarding Fort Hills significant EBITDA upside potential, amount of potential annual EBITDA from and Energy providing the basis for strong and steady cash flow for decades; Fort Hills debottlenecking potential; and all other estimates and projections associated with our business and operations.

The forward-looking statements are based on and involve numerous assumptions, risks and uncertainties and actual results may vary materially. These statements are based on assumptions, including, but not limited to, general business and economic conditions, interest rates, the supply and demand for, deliveries of, and the level and volatility of prices of, zinc, copper, coal, blended bitumen, and other primary metals, minerals and products as well as steel, oil, natural gas, petroleum, and related products, the timing of the receipt of regulatory and governmental approvals for our development projects and other operations and new technologies, our costs of production and production and productivity levels, as well as those of our competitors, power prices, continuing availability of water and power resources for our operations, market competition, the accuracy of our reserve estimates (including with respect to size, grade and recoverability) and the geological, operational and price assumptions on which these are based, conditions in financial markets, the future financial performance of the company, our ability to successfully implement our technology and innovation strategy, the performance of new technologies in accordance with our expectations, our ability to attract and retain skilled staff, our ability to procure equipment and operating supplies, positive results from the studies on our expansion projects, our coal and other product inventories, our ability to secure adequate transportation for our products, our ability to obtain permits for our operations and expansions, our ongoing relations with our employees and business partners and joint venturers, our expectations with respect to the carbon intensity of our operations, assumptions regarding returns of cash to shareholders include assumptions regarding our future business and prospects, other uses for cash or retaining cash. Our sustainability goals are based on a number of additional assumptions, including regarding the availability and effectiveness of technologies needed to achieve our sustainability goals and priorities; the availability of clean energy sources and zero-emissions alternatives for transportation on reasonable terms; our ability to implement new source control or mine design strategies and transition to seawater or low-quality water on commercially reasonable terms without impacting production objectives; our ability to successfully implement our technology and innovation strategy; and the performance of new technologies in accordance with our expectations. In addition, assumptions regarding the Elk Valley Water Quality Plan include assumptions that additional treatment will be effective at scale, and that the technology and facilities operate as expected. Reserve and resource life estimates assume the mine life of longest lived resource in the relevant commodity is achieved, assumes production at planned rates and in some cases development of as yet undeveloped projects. Capital allocation decisions, and decisions regarding the payment of dividends and return of capital to shareholders, are in the discretion of the board of directors. Assumptions regarding QB2 include

# Caution Regarding Forward-Looking Statements

assumption of completion based on current project assumptions and assumptions regarding the final feasibility study; assumptions regarding QB3 include assumptions regarding the receipt of permits. Assumptions regarding QB2 include current project assumptions and assumptions regarding the final feasibility study, as well as there being no unexpected material and negative impact to the various contractors, suppliers and subcontractors for the QB2 project relating to COVID-19 or otherwise that would impair their ability to provide goods and services as anticipated during the suspension period or ramp-up of construction activities. Assumptions regarding the benefits of the Neptune Bulk Terminals expansion include assumptions that the project is operated in accordance with current expectations, and upstream infrastructure is in place to support the additional capacity. Statements regarding the availability of our credit facilities and project financing are based on assumptions that we will be able to satisfy the conditions for borrowing at the time of a borrowing request and that the facilities are not otherwise terminated or accelerated due to an event of default. Statements concerning future production costs or volumes are based on numerous assumptions of management regarding operating matters and on assumptions that demand for products develops as anticipated, that customers and other counterparties perform their contractual obligations, that operating and capital plans will not be disrupted by issues such as mechanical failure, unavailability of parts and supplies, labour disturbances, interruption in transportation or utilities, adverse weather conditions, and that there are no material unanticipated variations in the cost of energy or supplies. Statements regarding anticipated steelmaking coal sales volumes and average steelmaking coal prices depend on, among other things, timely arrival of vessels and performance of our steelmaking coal-loading facilities, as well as the level of spot pricing sales. The foregoing list of assumptions is not exhaustive. Events or circumstances could cause actual results to vary materially. Assumptions are also included in the footnotes to the slides.

Factors that may cause actual results to vary materially include, but are not limited to: COVID-19 related suspension of activities and negative impacts on our suppliers, contractors, employees and customers; extended delays in return to normal operations due to COVID-19 related challenges; changes in commodity and power prices, changes in market demand for our products; changes in interest and currency exchange rates; acts of governments and the outcome of legal proceedings; inaccurate geological and metallurgical assumptions (including with respect to the size, grade and recoverability of mineral reserves and resources); unanticipated operational difficulties (including failure of plant, equipment or processes to operate in accordance with specifications or expectations, cost escalation, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job action, adverse weather conditions and unanticipated events related to health, safety and environmental matters); union labour disputes; political risk; social unrest; failure of customers or counterparties (including logistics suppliers) to perform their contractual obligations; changes in our credit ratings; unanticipated increases in costs to construct our development projects, difficulty in obtaining or retaining permits; inability to address concerns regarding permits or environmental impact assessments; current and new technologies relating to our Elk Valley water treatment efforts and other sustainability goals and targets may not perform as anticipated or may not be available, and ongoing monitoring may reveal unexpected environmental conditions requiring additional remedial measures; and changes or further deterioration in general economic conditions. Development of future reserves and resources is dependent on, among other factors, receipt of permits. Current and new technologies relating to our Elk Valley water treatment efforts may not perform as anticipated, and ongoing monitoring may reveal unexpected environmental conditions requiring additional remedial measures. QB2 construction progress and timing of first production is dependent on, among other matters, our continued ability to successfully manage through the impacts of COVID-19. Red Dog production may also be impacted by water levels at site. The impact of recent flooding in British Columbia may cause actual results to vary.

The forward-looking statements in this presentation and actual results will also be impacted by the effects of COVID-19 and related matters. The overall effects of COVID-19 related matters on our business and operations and projects will depend on how the ability of our sites to maintain normal operations, and on the duration of impacts on our suppliers, customers and markets for our products, all of which are unknown at this time. Continuing operating activities is highly dependent on the progression of the pandemic and the success of measures taken to prevent transmission, which will influence when health and government authorities remove various restrictions on business activities.

We assume no obligation to update forward-looking statements except as required under securities laws. Further information concerning risks and uncertainties associated with these forward-looking statements and our business can be found in our Annual Information Form for the year ended December 31, 2020, filed under our profile on SEDAR ([www.sedar.com](http://www.sedar.com)) and on EDGAR ([www.sec.gov](http://www.sec.gov)) under cover of Form 40-F, as well as subsequent filings, including but not limited to our quarterly reports. All dollar amounts disclosed herein are in Canadian dollars unless otherwise noted.

## QB2 Project Disclosure

All economic analysis with respect to the QB2 project based on a development case which includes inferred resources within the life of mine plan, referred to as the Sanction Case, which is the case on which Teck based its development decision for the QB2 project. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling. Nonetheless, based on the nature of the mineralization, Teck has used a mine plan including inferred resources as the development mine plan for the QB2 project.

The economic analysis of the Sanction Case, which includes inferred resources, may be compared to economic analysis regarding a hypothetical mine plan which does not include the use of inferred resources as mill feed, referred to as the Reserve Case, and which is set out in Appendix slides "QB2 Project Economics Comparison" and "QB2 Reserves and Resources Comparison".

# Teck is Poised for Growth

Providing essential metals and minerals for a low-carbon world

## Right Opportunities

- Strong demand for our metals and minerals, led by growth and decarbonization

## Right Assets

- Industry leading copper growth, strengthening existing high-quality, low carbon assets

## Right Approach

- Highest standards of safety, sustainability and operational excellence in everything we do, RACE21™

## Right Team

- Our people deliver the optimal mix of industry leading technical, digital, sustainability, commercial and financial leadership

# Health & Safety and Sustainability

## Health & Safety

*A core value for Teck*

**80% reduction in HPIF** from 2016 to H1 2021

From 2020 to H1 2021:  
**38% lower HPIF**  
**26% lower LTIF**

## Inclusion & Diversity

*Enhancing representation and diversity*

**29%** women in senior management

**One-third** of all new hires are women

## Climate

*Rebalancing to low-carbon metals*

**Carbon neutral** operations by 2050

**33% reduction** in carbon intensity by 2030

**88% green power** at operations today

## Communities

*Serving the needs of communities and Indigenous Peoples*

**72** active agreements with Indigenous Peoples

**24%** of procurement spend with local suppliers

## Water

*Protecting water quality and reducing use*

**Tripling water treatment capacity** in Elk Valley in 2021

Achieved **13% reduction** in freshwater use at Chilean operations; desalinated water at QB2

# Accelerated Need for Essential Metals And Minerals for a Low-Carbon World

## Copper Demand<sup>1</sup> (kt)

- Strong demand for metals and minerals driven by decarbonization, population growth and a rising middle class
- Unprecedented pandemic monetary and fiscal stimulus
- Economic recovery continues as vaccines are rolled out
- Current stockpiles of essential minerals remain at low levels

Teck is positioned to double copper production by 2023<sup>2</sup>

# High-Quality Steelmaking Coal Is Required for the Low-Carbon Transition

Seaborne Steelmaking Coal Supply Changes With All Projects Through 2050<sup>1</sup> (Mt)

Seaborne Steelmaking Coal Supply/Demand Gap (Mt)

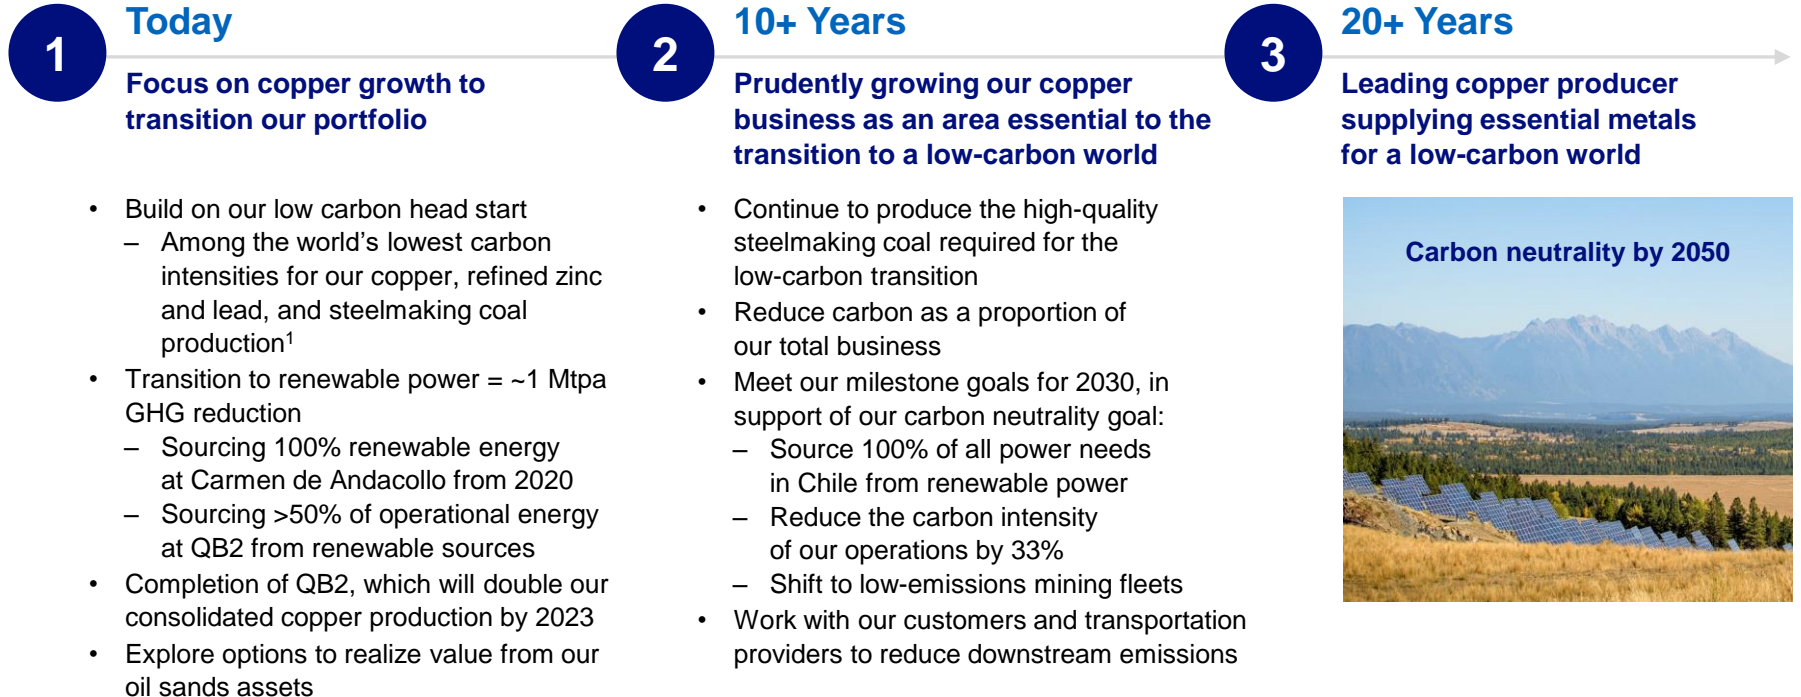

(Mt)	Net Capacity 2030	Net Capacity 2040	Net Capacity 2050
Gap with high likelihood projects	-22	-65	-70
Gap with high and low likelihood projects	-19	-37	-41

- The magnitude of steelmaking coal demand will be ultimately driven by the pace of decarbonization
- Long-term demand for seaborne steelmaking coal will remain robust
- At the same time, supply growth is constrained

Without the addition of confirmed and unconfirmed greenfield and brownfield projects, there will be a significant gap to steelmaking coal demand between 2025 and 2030

# Teck and the Low-Carbon Transition

We believe Teck's strategy will ensure we are well-positioned for changes in demand for mining commodities driven by the transition to a low-carbon world

# Prudent Copper Growth Strategy

## Accelerate

capital efficient growth in copper

## Maximize

cash flows from operations  
to fund copper growth and shareholder returns

## Strengthen

existing high-quality assets through RACE21™

## Discipline

in capital allocation, maximizing shareholder returns

## Leadership

in sustainability

# Industry Leading Copper Growth

Teck has continued to invest in growth projects; peers have not

**WoodMac: Consolidated Copper Production Growth<sup>1</sup>  
Teck<sup>2</sup> vs. Peers<sup>3</sup> 2021E-2023E**

**Teck provides investors exposure to industry leading copper growth and valuation unlock**

# Portfolio of Copper Growth Options

Well understood resource base creates multiple options

- High quality resources in very attractive mineral districts including Canada, the U.S., Mexico, Chile, and Peru
  - Including ~22 million ounces<sup>1</sup> of measured and indicated gold resources, and ~10 million ounces<sup>1</sup> in inferred gold resources in our copper growth options<sup>1</sup>
- Prudent investment to further define path to value, e.g. conversion of resources to reserves
- Leveraging exploration, development and commercial expertise
- Sustainability and community focus

**Teck's Consolidated Copper Asset Reserves and Resources (CuEq Mt)<sup>2</sup>**

Continued investment has resulted in a robust pipeline of copper growth options

# Significant Base Metals Growth

Base Metals business growth rivals leading copper peers

## Consolidated Copper Equivalent Production <sup>1</sup> (kt CuEq)

# QB2 is Delivering to Key Milestones and Positioning for Start-Up

## World class COVID-19 protocols deliver results

- Vaccinations, COVID-19 protocols and testing key enablers
- Continued ramp-up of construction workforce

## Focus on delivering to key milestones

- Critical path through the grinding circuit remains on track
- Focus on port to pond infrastructure for first water delivery
- Delivering early systems for commissioning
- Working creatively with Bechtel and contractors for successful delivery

## Driving value by linking people, process, and workplace design

- Focus to ensure a seamless transition to operations
- Operations leadership in place and ramping up workforce

**First production at QB2 continues to be expected in H2 2022**

# Teck is Nearing an Inflection Point

Transitioning from cash outflows to potential for significant EBITDA<sup>1</sup> generation

# Solid Track Record of Cash Returns to Shareholders

>C\$3.0 billion of dividends and C\$1.7 billion of share buybacks 2011-2020

## Teck's Dividends and Buybacks (C\$M)

Significant EBITDA<sup>2</sup> generation potential from QB2 could drive incremental funds available for supplemental distributions to shareholders

# Teck is Poised for Growth

## Right Opportunities

Strong demand for our metals and minerals, led by growth and decarbonization

## Right Assets

Industry leading copper growth, strengthening existing high-quality, low carbon assets

## Right Approach

Highest standards of sustainability in everything we do, operational excellence, RACE21™

## Right Team

Our people deliver the optimal mix of industry leading technical, digital, sustainability, commercial and financial leadership

Providing essential metals and minerals for a low-carbon world

# Appendix

# Endnotes

## **Slide 6: Accelerated Need for Essential Metals and Minerals for a Low-Carbon World**

1. Source: CRU Mobility and Energy Futures – Perspectives towards 2035. Approximate figures; total copper demand from CRU's Copper Market Outlook.
2. Consolidated basis.

## **Slide 7: High-Quality Steelmaking Coal Is Required for the Low-Carbon Transition**

1. Source: MineSpans. All production volumes included in the forecast are based on a 93% utilization rate of capacity. Includes ramp up of current capacity and projects considered to have a high certainty or probability of completion.
2. Low likelihood projects are assumed to come online based on increasing prices surpassing the incentive price required for individual projects at a return on investment of 15%.

## **Slide 8: Teck and the Low-Carbon Transition**

1. Barclays Research; Teck. 2017.

## **Slide 10: Industry Leading Copper Growth**

1. Source: Wood Mackenzie base case (attributable) copper production dataset. Consolidated production estimates were derived based on accounting standards for consolidation for Teck and its peers.
2. Teck growth estimate uses 2020 actual production and Wood Mackenzie data for 2023.
3. Copper peers: Antofagasta, First Quantum, Freeport, Hudbay, Lundin, Southern Copper. Diversified peers: Anglo American, BHP, Glencore, Rio Tinto. Peer production metrics for 2020 and 2023 are from Wood Mackenzie. Peer production metrics for 2020 and 2023 are from Wood Mackenzie. Peer averages are the simple averages.

## **Slide 11: Portfolio of Copper Growth Options**

1. Contained equivalent copper metal at 100% basis for all projects. Copper growth assets are: Zafranal, San Nicolás, NuevaUnión, Mesaba, Schaft Creek, Galore Creek. See Teck's 2020 AIF for further information, including the grade and quantity, regarding the gold reserves and resources for these projects and the grade of the other metals used to determine the copper equivalent.
2. Contained equivalent copper metal at 100% basis for all projects. CuEq calculated with price assumptions: US\$3.50/lb Cu; US\$1.15/lb Zn; US\$6.90/lb Ni; US\$21/lb Co; US\$10/lb Mo; US\$1,400/oz Au; US\$18/oz Ag; US\$1,300/oz Pt; US\$1,200/oz Pt.

## **Slide 12: Significant Base Metals Growth**

1. Production for 2020 reflects actuals sourced from company disclosures. Production for 2023 is sourced from Wood Mackenzie asset models, considering assets included in Wood Mackenzie's base case for each company. Production is shown on a consolidated reporting basis, except where noted as attributable for ownership. Copper equivalent production for 2020 is calculated using annual average prices of: US\$2.83/lb Cu, US\$1.05/lb Zn, US\$0.85/lb Pb, US\$8.68/lb Mo, US\$1,779/oz Au, US\$20.70/oz Ag, US\$6.43/lb Ni. Copper equivalent production for 2023 is calculated using the following prices: US\$3.50/lb Cu, US\$1.15/lb Zn, US\$0.90/lb Pb, US\$10.50/lb Mo, US\$1,650/oz Au, US\$22.50/oz Ag, US\$6.90/lb Ni.
2. 2020 C1 cash cost data is sourced from company disclosures and are for copper operations only. Expected 2023 C1 cash cost data is sourced from S&P Global Market Intelligence (formerly SNL Metals & Mining) cost curve database considering primary copper mines and total cash costs on a by-product basis for Teck and peers, and weighted on a consolidated production basis.
3. Enterprise Value, or Total Enterprise Value is as of market close on January 10, 2022 and is sourced from S&P Capital IQ.

## **Slide 13: QB2 is Delivering to Key Milestones and Positioning for Start-Up**

1. On a 100% go forward basis from January 1, 2019 including escalation and excluding working capital or interest during construction using actual realized exchange rates until March 30, 2020 and assuming a CLP/USD exchange rate of 775 from April 1, 2020. Includes approximately US\$400 million in contingency.
2. Based on the assumptions and impacts to construction productivity under COVID-19 protocols. Assumes a CLP/USD rate of 775 over the remainder of the project.

## **Slide 14: Teck is Nearing an Inflection Point**

1. EBITDA is a non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
2. Guidance for QB2 capital expenditures as at October 26, 2021.

## **Slide 15: Solid Track Record of Cash Returns to Shareholders**

1. As at September 30, 2021.
2. EBITDA is a non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

# Overview and Financial Strategy

Teck

# About Teck

High-quality assets in the Americas

Proven operational excellence underpinning cost competitiveness

Doubling of copper production by 2023 through QB2<sup>1</sup>  
Significant value potential from a portfolio of copper growth options

Recognized industry leader in ESG performance

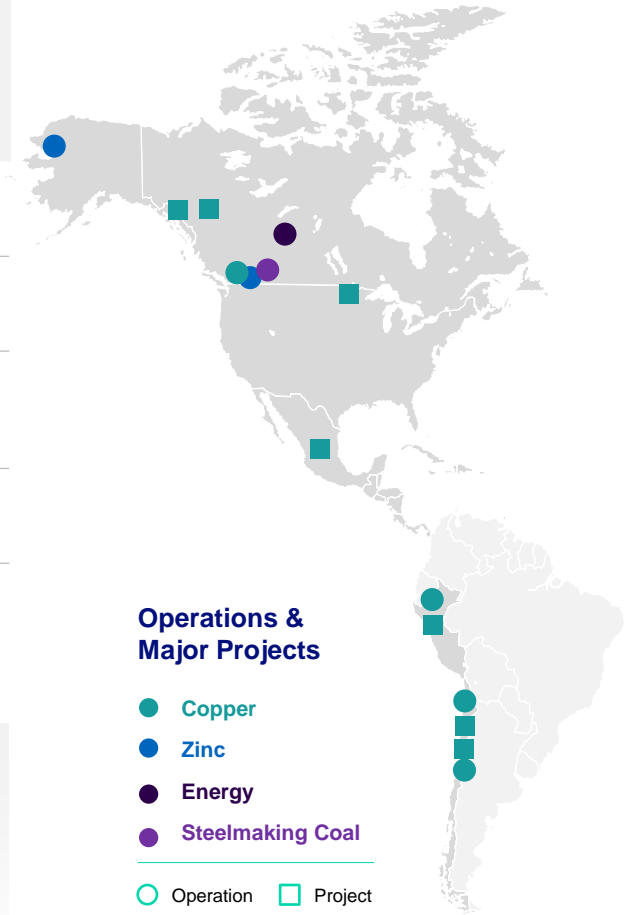

Strong balance sheet and rigorous capital allocation framework

**One of Canada's leading mining companies,** headquartered in Vancouver, British Columbia

Among the world's **lowest carbon intensity producers** of copper, zinc and steelmaking coal

**Strong safety performance** with stringent COVID-19 prevention protocols in place across the business

**Experienced leadership team** with proven track record of project execution and operational excellence

# Global Customer Base

Revenue contribution from diverse markets

## 2020 Revenue by Business Unit

## 2020 Gross Profit Before Depreciation and Amortization<sup>1</sup> by Business Unit

## 2020 Revenue by Geography

# Strong Financial Position

## Balance Sheet

- Rated investment grade by all four agencies
- No significant note maturities prior to 2030<sup>1</sup>

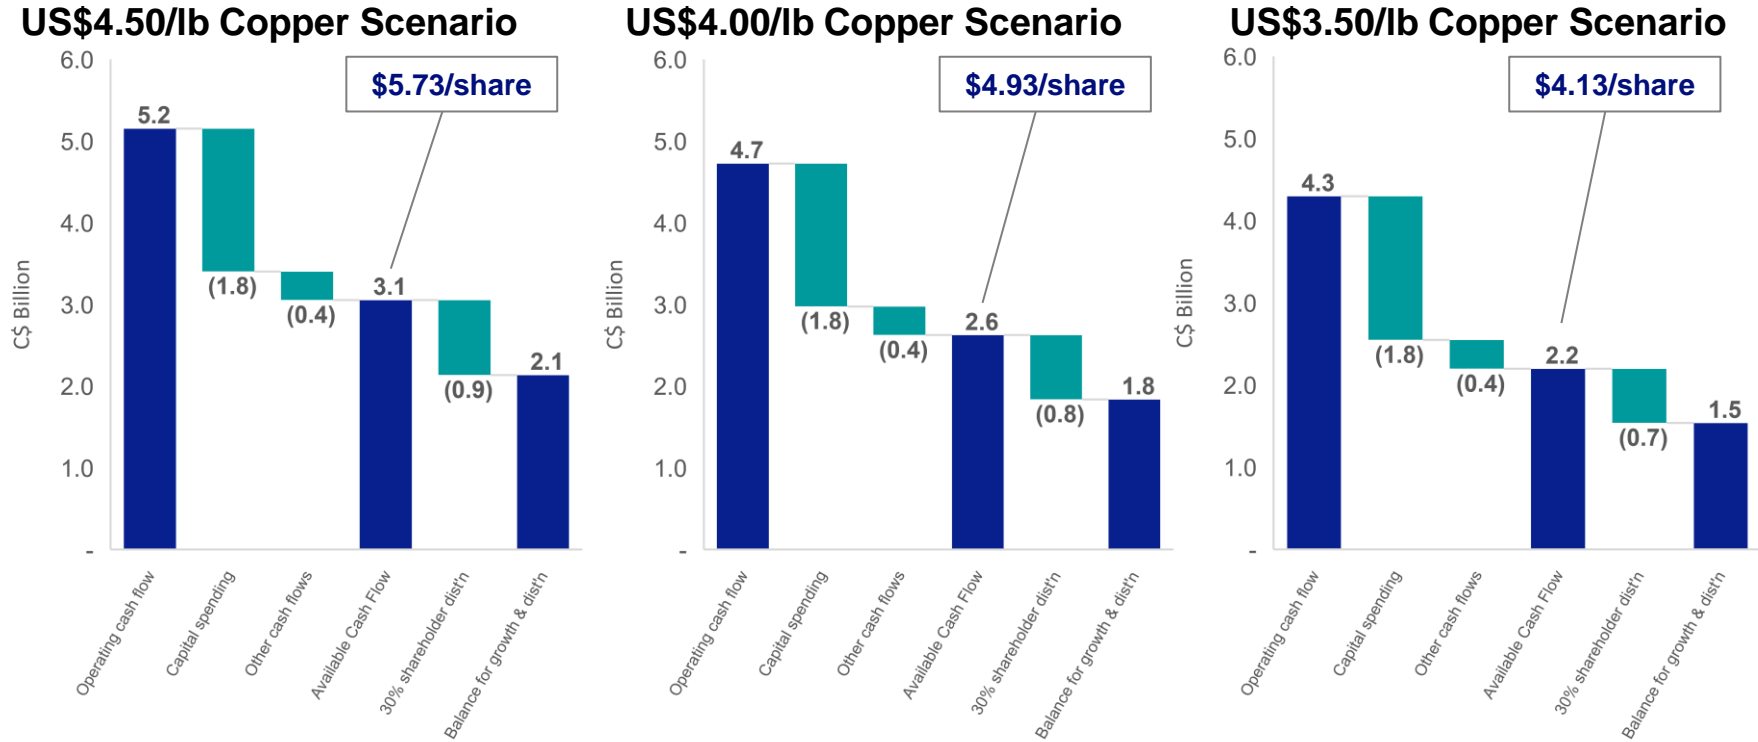

## Liquidity

- C\$5.4 billion<sup>2</sup> of liquidity available
- Converted our US\$4 billion committed credit facility into a Sustainability-Linked facility in support of Teck's sustainability strategy goals and extended its maturity to October 2026; facility undrawn as of October 26, 2021
- Cancelled our US\$1 billion credit facility maturing June 2022

# Illustrative Cash Flows - QB2 Full Production

Scenarios indicate potential Available Cash Flow of C\$4–6/share

For further details please see Teck Illustrative Cash Flows – QB2 Full Production slides in the appendix of this presentation.

For this purpose, we define available cash flow as cash flow from operating activities after interest and finance charges, lease payments and distributions to non-controlling interests less: (i) sustaining capital and capitalized stripping; (ii) committed growth capital; (iii) any cash required to adjust the capital structure to maintain solid investment grade credit metrics; and (iv) our base \$0.20 per share annual dividend. Proceeds from any asset sales may also be used to supplement available cash flow. Any additional cash returns will be made through share repurchases and/or supplemental dividends depending on market conditions at the relevant time.

# Teck Illustrative Cash Flows - QB2 Full Production

Scenarios indicate potential Available Cash Flow of C\$4–6/share

## Illustrative Available Cash Flow (C\$B)

	US\$4.50/lb Copper	C\$/share <sup>9</sup>	US\$4.00/lb Copper	C\$/share <sup>9</sup>	US\$3.50/lb Copper	C\$/share <sup>9</sup>
Adjusted EBITDA <sup>1</sup>	\$6.0		\$5.6		\$5.3	
QB2 EBITDA (100%) <sup>2</sup>	2.6		2.2		1.8	
Less: cash taxes (100%) <sup>3</sup>	(1.9)		(1.7)		(1.5)	
Less: cash interest paid <sup>4</sup>	(0.4)		(0.4)		(0.4)	
Less: lease payments <sup>5</sup>	(0.1)		(0.1)		(0.1)	
Operating cash flow	\$6.2		\$5.6		\$5.0	
Less: capital spending <sup>6</sup>	(1.8)		(1.8)		(1.8)	
Less: base dividends <sup>7</sup>	(0.1)		(0.1)		(0.1)	
Less: QB2 project finance repayment (100%) <sup>8</sup>	(0.4)		(0.4)		(0.4)	
<b>Illustrative Available Cash Flow (100%)</b>	<b>\$3.9</b>		<b>\$3.4</b>		<b>\$2.8</b>	
Illustrative Available Cash Flow (Teck's share)	3.1	\$5.73	2.6	\$4.93	2.2	\$4.13
30% of Teck's Available Cash Flow for supplemental distribution	(0.9)	(1.72)	(0.8)	(1.48)	(0.7)	(1.24)
<b>Balance available for Teck's growth and shareholders</b>	<b>\$2.1</b>	<b>\$4.01</b>	<b>\$ 1.8</b>	<b>\$3.45</b>	<b>\$1.5</b>	<b>\$2.89</b>
Gross Debt/EBITDA (Teck's share; assumes June 30, 2021 reported gross debt)	0.96x		1.04x		1.13x	

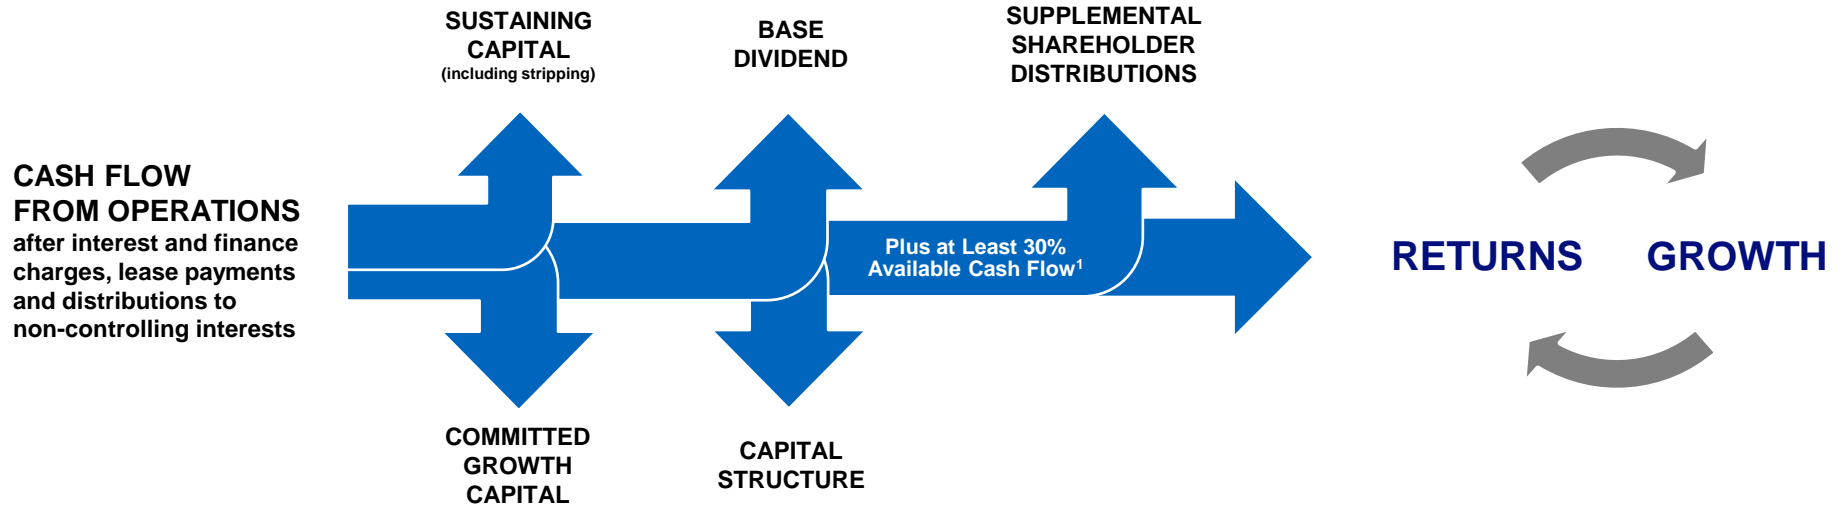

Illustrative Proforma; includes QB2 on a 100% consolidation basis; QB2 EBITDA assumes 290ktpy copper sales and US\$1.28/lb C1 cash cost.

For this purpose, we define available cash flow as cash flow from operating activities after interest and finance charges, lease payments and distributions to non-controlling interests less: (i) sustaining capital and capitalized stripping; (ii) committed growth capital; (iii) any cash required to adjust the capital structure to maintain solid investment grade credit metrics; and (iv) our base \$0.20 per share annual dividend. Proceeds from any asset sales may also be used to supplement available cash flow. Any additional cash returns will be made through share repurchases and/or supplemental dividends depending on market conditions at the relevant time.

# Capital Allocation Framework

Shareholder distributions of 30-100% of Available Cash Flow<sup>1</sup>

**Solid track record of cash returns to shareholders**

1. For this purpose, we define available cash flow as cash flow from operating activities after interest and finance charges, lease payments and distributions to non-controlling interests less: (i) sustaining capital and capitalized stripping; (ii) committed growth capital; (iii) any cash required to adjust the capital structure to maintain solid investment grade credit metrics; and (iv) our base \$0.20 per share annual dividend. Proceeds from any asset sales may also be used to supplement available cash flow. Any additional cash returns will be made through share repurchases and/or supplemental dividends depending on market conditions at the relevant time.

# Production Guidance

	2020 Actual	2021 Guidance <sup>1</sup>	3-Year Guidance <sup>1</sup> (2022-2024)
Units in 000's tonnes (excluding steelmaking coal, molybdenum, and bitumen)			
<b>Copper<sup>2,3,4</sup></b>			
Highland Valley	119.3	128-133	135-165
Antamina	85.6	91-95	90
Carmen de Andecollo	57.4	46-51	50-60
Quebrada Blanca <sup>6</sup>	13.4	10-11	-
Total copper	275.7	275-290	275-315
<b>Zinc<sup>2,3,5</sup></b>			
Red Dog	490.7	510-530	510-550
Antamina	96.3	95-100	80-100
Total zinc	587.0	605-630	590-650
<b>Refined zinc</b>			
Trail	305.1	285-290	305-315
<b>Steelmaking coal (Mt)</b>	21.1	24.5-25.5	26.0-27.0
<b>Bitumen<sup>3</sup> (Mbbbl)</b>			
Fort Hills	8.4	6.6-8.1	14
<b>Lead<sup>2</sup></b>

	<b>\$ 499</b>	<b>\$ 675</b>

# Water Treatment Guidance

## Excerpt from Teck's Q3 2021 Press Release

There is no change to our 2021 guidance on water-related spending. We expect capital spending of approximately \$255 million in 2021 on water treatment (AWTFs and SRFs) and water management (source control, calcite management and tributary management). By the end of 2021, we expect to increase total treatment capacity to more than 50 million litres per day. From 2022 to 2024, capital investment in water management and water treatment is expected to be approximately \$400 to \$500 million. The investment in water treatment will further increase treatment capacity to 90 million litres per day.

In addition to the capital set out above and as previously announced, the aggregate cost of the incremental measures required under the October 2020 Direction issued by Environment and Climate Change Canada (the Direction) is preliminarily estimated at \$350 to \$400 million between 2021 and 2030.

Operating costs associated with water treatment were approximately \$0.75 per tonne in 2020 and, as previously disclosed, are projected to increase gradually over the long term to approximately \$3 per tonne as additional water treatment becomes operational. Long-term capital costs for construction of additional treatment facilities are expected to average approximately \$2 per tonne annually.

Final costs of implementing the Plan and the Direction for managing water quality will depend in part on the technologies applied, on regulatory developments and on the results of ongoing environmental monitoring and modelling. The timing of expenditures will depend on resolution of technical issues, permitting timelines and other factors. Certain cost estimates are based on limited engineering and the feasibility of certain measures has not yet been confirmed. Implementation of the Plan also requires additional operating permits. We expect that, in order to maintain water quality, some form of water treatment will continue for an indefinite period after mining operations end. The Plan contemplates ongoing monitoring to ensure that the water quality targets set out in the Plan are in fact protective of the environment and human health, and provides for adjustments if warranted by monitoring results. This ongoing monitoring, as well as our continued research into treatment technologies, could reveal unexpected environmental impacts, technical issues or advances associated with potential treatment technologies that could substantially increase or decrease both capital and operating costs associated with water quality management, or that could materially affect our ability to permit mine life extensions in new mining areas.

# Commodity Price Leverage<sup>1</sup>

# Tax-Efficient Earnings in Canada and Chile

## **Canada: ~C\$4.5 billion in available tax pools at December 31, 2020**

- Includes:
  - \$3.8 billion in Canadian federal net operating loss carryforwards
  - \$0.3 billion in Canadian Development Expenses (30% declining balance p.a.)
  - \$0.4 billion in allowable capital loss carryforwards
- Applies to cash income taxes in Canada
- Does not apply to:
  - Resource taxes in Canada
  - Cash taxes in foreign jurisdictions

## **Chile: ~C\$800 million in available tax pools at December 31, 2020**

- Chilean net operating loss carryforwards
- Applies to cash income taxes for QB2

# Endnotes: Overview and Financial Strategy

## Slide 21: Global Customer Base

1. Gross profit before depreciation and amortization is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

## Slide 22: Strong Financial Position

1. As at September 30, 2021.
2. As at October 26, 2021.

## Slide 24: Teck Illustrative Cash Flows – QB2 Full Production

1. Adjusted EBITDA is H1 2021 Adjusted EBITDA annualized and price adjusted assuming copper prices of US\$4.50, US\$4.00, and US\$3.50 per pound, and a hard coking coal (HCC) price of US\$199/t FOB Australia. All other commodity prices are at H1 2021 actual average prices of copper US\$4.13 per pound, zinc US\$1.29 per pound, steelmaking coal US\$137.50 per tonne realized price, Western Canadian Select (WCS) US\$49.78 per barrel, West Texas Intermediate (WTI) US\$62.16 per barrel and a Canadian/U.S. dollar exchange rate of \$1.25. The sensitivity of our EBITDA to changes in the Canadian/U.S. dollar exchange rate and commodity prices are: C\$0.01 change in US\$ FX = C\$87 million EBITDA; US\$ 0.01/lb change in copper price = C\$7 million EBITDA; US\$ 0.01/lb change in zinc price = C\$12 million EBITDA; US\$1/tonne change in steelmaking coal price = C\$29 million EBITDA; US\$1/bbl change in WCS price = C\$8 million EBITDA; US\$1/bbl change in WTI price = C\$3 million EBITDA. EBITDA and Adjusted EBITDA are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
2. QB2 EBITDA assumes a C1 cash cost of US\$1.28/lb, a Canadian/U.S. dollar exchange rate of \$1.25, and annual copper sales of 290,000 tonnes. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.
3. Annualized H1 2021 cash taxes adjusted for future Canadian cash taxability on the basis of spot HCC prices, and future QB2 taxability, post-QB2 ramp up and post QB2 accelerated tax depreciation period. QB2 cash taxes are calculated on a post-financing basis.
4. Annualized H1 2021 cash interest paid.
5. Lease payments are annualized H1 2021 lease payments (C\$130 million/year).
6. Guidance for capital expenditures as at September 20, 2021.
7. Base dividend of C\$0.20/share, paid quarterly.
8. QB2 project finance repayments are two semi-annual principal repayments of US\$147 million each.
9. Per share amounts assume 532.4 million shares outstanding as at June 30, 2021.

## Slide 26: Production Guidance

1. As at October 26, 2021. See Teck's Q3 2021 press release for further details. Steelmaking coal guidance for 2021 production, adjusted site cash cost of sales and transportation costs were updated on December 5, 2021. Please see Teck's press release dated December 5, 2021 for further details.
2. Metal contained in concentrate.
3. We include 100% of production and sales from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes, even though we do not own 100% of these operations, because we fully consolidate their results in our financial statements. We include 22.5% and 21.3% of production and sales from Antamina and Fort Hills, respectively, representing our proportionate ownership interest in these operations.
4. Copper production includes cathode production at Quebrada Blanca and Carmen de Andacollo.
5. Total zinc includes co-product zinc production from our 22.5% proportionate interest in Antamina.
6. Three-year guidance 2022-2024 excludes production from QB2.

# Endnotes: Overview and Financial Strategy

## **Slide 27: Sales and Unit Cost Guidance**

1. As at October 26, 2021. See Teck's Q3 2021 press release for further details. Steelmaking coal sales for Q4 2021 was updated on December 5, 2021. Please see Teck's press release dated December 5, 2021 for further details.
2. Metal contained in concentrate.
3. Copper unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Copper net cash unit costs include adjusted cash cost of sales and smelter processing charges, less cash margins for by-products including co-products. Guidance for 2021 assumes a zinc price of US\$1.30 per pound, a molybdenum price of US\$14.00 per pound, a silver price of US\$25 per ounce, a gold price of US\$1,800 per ounce and a Canadian/U.S. dollar exchange rate of \$1.24.
4. After co-product and by-product margins.
5. Zinc unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Zinc net cash unit costs are mine costs including adjusted cash cost of sales and smelter processing charges, less cash margins for by-products. Guidance for 2021 assumes a lead price of US\$1.00 per pound, a silver price of US\$25 per ounce and a Canadian/U.S. dollar exchange rate of \$1.24. By-products include both by-products and co-products.
6. Steelmaking coal unit costs are reported in Canadian dollars per tonne.
7. Non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

## **Slide 28: Capital Expenditures Guidance**

1. As at October 26, 2021. See Teck's Q3 2021 press release for further details.
2. Steelmaking coal sustaining capital guidance for 2021 includes \$245 million of water treatment capital. 2020 includes \$267 million of water treatment capital.
3. Growth expenditures include RACE21™ capital expenditures for 2021 of \$150 million, of which \$30 million relates to copper, \$5 million relates to zinc, \$110 million relates to steelmaking coal, and \$5 million relates to corporate projects.
4. Copper growth guidance for 2021 includes studies for HVC 2040, Antamina, QB3, Zafranal, San Nicolás and Galore Creek.

## **Slide 30: Commodity Price Leverage**

1. As at October 26, 2021. The sensitivity of our annual profit attributable to shareholders and EBITDA to changes in the Canadian/U.S. dollar exchange rate and commodity prices, before pricing adjustments, based on our current balance sheet, our 2021 mid-range production estimates, current commodity prices and a Canadian/U.S. dollar exchange rate of \$1.25. See Teck's Q3 2021 press release for further details.
2. All production estimates are subject to change based on market and operating conditions.
3. The effect on our profit attributable to shareholders and on EBITDA of commodity price and exchange rate movements will vary from quarter to quarter depending on sales volumes. Our estimate of the sensitivity of profit and EBITDA to changes in the U.S. dollar exchange rate is sensitive to commodity price assumptions.
4. Zinc includes 287,500 tonnes of refined zinc and 617,500 tonnes of zinc contained in concentrate.
5. Bitumen volumes from our energy business unit.
6. Our WTI oil price sensitivity takes into account our interest in Fort Hills for respective change in revenue, partially offset by the effect of the change in diluent purchase costs as well as the effect on the change in operating costs across our business units, as our operations use a significant amount of diesel fuel.

# ESG Leadership

Teck

# Health, Safety, Environment and Communities Performance

## Responding to COVID-19—Five Pillar Approach

---

Prevention

Employee Support

Communities & Public Health

Business Continuity

Communication

**Prioritizing the health and safety of our people and communities**

---

# Health, Safety, Environment and Communities Performance

- Safety performance in H1 2021 vs. FY 2020
  - **38% reduction** in High-Potential Incidents
  - **26% decrease** in Lost-Time Injury Frequency
- Continued implementation of **High Potential Risk Program** to reduce the most significant risks
- 1 fatality in January 2021 following a fatality-free year in 2020. **Carried out in-depth investigation** to identify measures to prevent reoccurrence

**Overall, 80% reduction in High-Potential Incident Frequency from 2016 to H1 2021**

**Teck Operated Incident Frequency (per 200,000 hours worked)**

# Health, Safety, Environment and Communities Performance

## Communities

Engaging throughout the mining life-cycle to create lasting benefits

- **\$10.8 billion in economic benefits** generated in 2020
- **72% local employment** at operations
- Dedicated **\$20 million COVID-19 fund** to support local communities
- Global citizenship initiatives **Copper & Health** and **Zinc & Health**

## Indigenous Peoples

Respect for culture and heritage; early engagement and focus on working to achieve Free, Prior and Informed Consent (FPIC)

- **72 active Indigenous agreements** covering all operations
- **\$192 million** spent with Indigenous businesses in 2020
- **Support for reconciliation:** Reconciliation Canada, Indian Residential School Society, Indspire youth bursary

# Health, Safety, Environment and Communities Performance

## Water

Working to protect water quality and reducing use in water-scarce regions.

- **Tripling** Elk Valley treatment capacity in 2021. Commissioned **20 M l/day Elkview SRF**
- Achieved **13%** reduction in freshwater use at Chilean operations
- Reused and recycled water at mining operations **3.3** times
- Constructing dedicated desalination plant at QB2

## Tailings

Meeting global best practices for safety at our tailings facilities throughout their life-cycle

- **Fully applying GISTM** by August 2023
- All **active and closed** tailings facilities meet or exceed regulatory requirements
- **0** significant tailings-related environmental incidents in 2020 and to-date in 2021
- **100%** of facilities evaluated annually by a third-party Engineer of Record

# Health, Safety, Environment and Communities Performance

## Biodiversity & Reclamation

Working towards a net-positive impact on biodiversity

- **5,930 hectares** of cumulative land reclaimed to date
- Joint Management Agreement reached with the Ktunaxa Nation for over **7,000 hectares** of conservation lands
- Joined 1t.org Corporate Alliance to conserve, restore and grow **one trillion trees** by 2030

## Responsible Production

Reducing waste and pollution and keeping materials in use

- **27,583 tonnes** of waste recycled in 2020
- **43,100 tonnes** of urban ore and secondary sources recycled at Trail Operations in 2020
- Piloting **blockchain-enabled product passport**

# Health, Safety, Environment and Communities Performance

## Inclusion, Equity & Diversity

Fostering a workplace where everyone is included, valued and equipped for today and the future

- Named to **Forbes World's Best Employers 2021**
- **20% women** in total Teck workforce, vs Bloomberg 2019 industry average of 15.7%
- **29% women** in senior management
- **One-third** of all new hires are women

## Governance

Transparency and accountability to drive results for all our stakeholders

- **25%** of Teck's board of directors are women, above the Osler 2020 industry average in Canada of 16%
- **Executive remuneration** linked to HSEC performance through integration into corporate, business unit and personal components

# Focus on Sustainability Leadership

Ambitious sustainability goals in eight strategic themes

Health and Safety

Climate Change

# Climate Change

## Starting from a strong position

**Well-positioned**  
for a Low-Carbon  
Economy

Among **lowest**  
**carbon intensity**  
**miners** globally

**Carbon pricing**  
already built into  
majority of business

CO<sub>2</sub> Copper Intensity Curve (2020), t CO<sub>2</sub>e/t Copper equivalent

**Copper**

CO<sub>2</sub> Zinc Intensity Curve (2020), t CO<sub>2</sub>e/t Zinc equivalent

**Zinc**

CO<sub>2</sub> Coal Intensity Curve (2020), t CO<sub>2</sub>e/t saleable coal

**Steelmaking Coal**

**Low-quartile CO<sub>2</sub> emissions per tonne of copper, zinc and steelmaking coal production<sup>1</sup>**

# Climate Change

## Our climate strategy

### Positioning Teck for a low-carbon economy

- Producing metals and minerals required for transition to a low-carbon economy
- Rebalancing portfolio towards copper
- Efficient, low-cost and low-carbon operations will keep Teck competitive

### Support for appropriate carbon pricing policies

- We support broad-based effective carbon pricing
- Best method to encourage global action on climate change
- Work with associations/government on policy solutions to limit climate change to 1.5°C

### Reducing our carbon footprint

Long-term targets:

- Carbon neutral by 2050
- Reduce carbon intensity of operations by 33% by 2030
- Work with customers and transportation providers to reduce downstream emissions

### Adapting to the physical impacts of climate change

- Increase resilience of operations
- Incorporate climate scenarios into project design and mine closure planning

# Climate Change

## Our pathway to net zero

**2020–2030:** Target readily available;  
cost-competitive technologies in these areas

# Near-Term Copper Growth - QB2 Project

*Photo: Concentrator, August 2021*

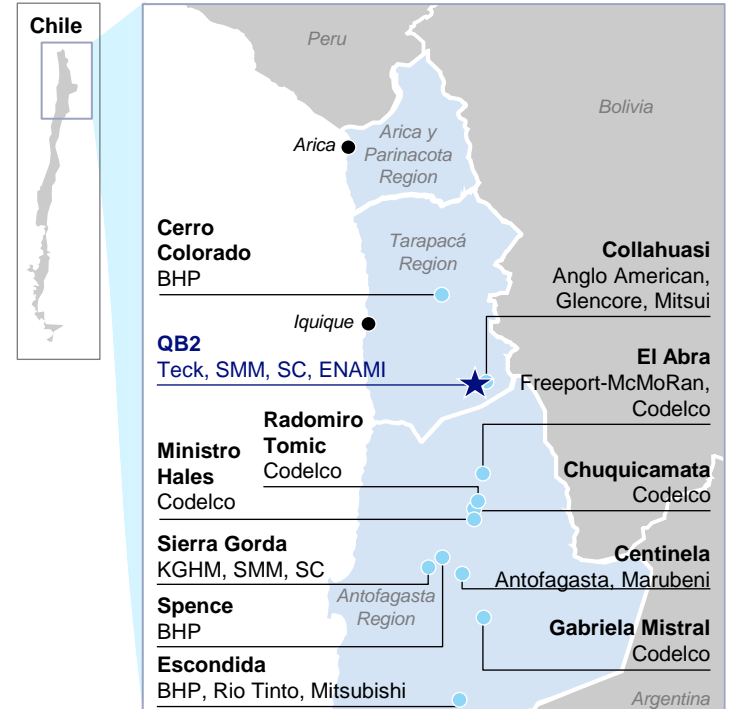

# QB2 Project

Executing on a world class development asset

## Highlights

- ✓ Large, long-life deposit
- ✓ Very low strip ratio
- ✓ Low all-in sustaining costs (AISC)<sup>1</sup>
- ✓ Potential to be a top 20 producer
- ✓ High grade, clean concentrates
- ✓ Significant brownfield development
- ✓ Community agreements in place and strong local relationships
- ✓ Expansion potential to be a top 5 producer

## Location

# QB2's Competitive Cost Position

## Competitive Operating Cost & Capital Intensity

- Given the exceptionally low strip ratio, consistent grade profile, compact site layout, and high level of automation, QB2 is expected to have attractive and relatively stable operating costs
- Exceptional strip ratio of 0.70 LOM, meaning for every one tonne of ore mined, only 0.70 tonnes of waste need to be mined (0.44 over first 5 full years)
  - Compares to other world class asset strip ratios of 2.6 for Escondida, 3.0 for Antamina, and 3.7 for Collahuasi<sup>1</sup>
  - Major benefit to sustaining capital since it reduces mobile fleet size and replacement costs

## Low Cash Cost Position

### C1 Cash Cost<sup>2</sup> & AISC<sup>3</sup> Curve<sup>1</sup> (US\$/lb, 2023E)

Based on Sanction Case (Including 199 Mt Inferred Resources)

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

# Large, Long Life Deposit at Quebrada Blanca

- QB2 uses only ~18% of the 2020 reserve and resource tonnage<sup>1</sup>
- Deposit is capable of supporting a very long mine life based on throughput rate of 143 ktpd<sup>2</sup> by utilizing further tailings capacity at already identified sites
- Actively evaluating potential options to exploit value of full resource through mill expansion and / or mine life extension
- Beyond the extensive upside included in the defined QB deposit, the district geology is highly prospective for exploration discovery and resource addition; mineralization is open in multiple directions

## Significant extension potential

### Reserve and Resource Tonnage (Mt)

Based on Sanction Case (Including 199 Mt Inferred Resources)

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

# QB2 Funding Model

Minimized Teck execution funding through partnership and project finance

## QB2 Funding Model - Post January 2019 (US\$B)

# QB2 Project Finance Facility

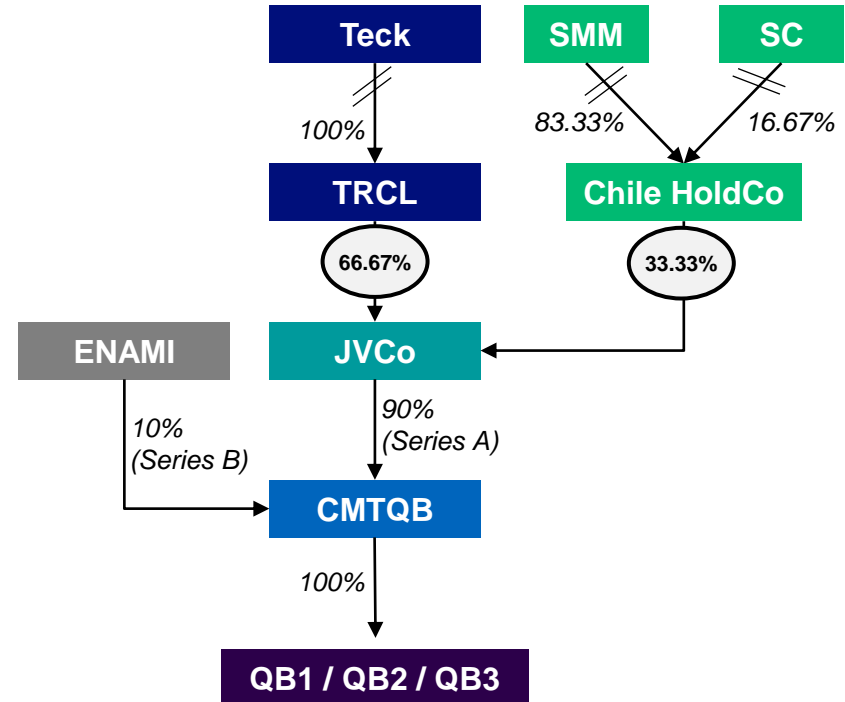

- Senior debt will continue to be drawn pro-rata under a pre-determined Senior Debt-to-Shareholder funding ratio until US\$2.5 billion is drawn
- Pre-completion, senior debt is guaranteed on a pro-rata basis (after consideration of ENAMI's 10% carried interest)
  - Teck 66.67% / SMM 27.77% / SC 5.56%
- Senior debt becomes non-recourse after successfully achieving operational completion tests
- Semi-annual amortization payments of US\$147 million will begin no later than June 15, 2023; facility matures in 2031
- The facility requires partial debt repayment upon dividend distribution to equity partners

# ENAMI Interest in Quebrada Blanca

- The government of Chile owns a 10% non-funding interest in Compañía Minera Teck Quebrada Blanca S.A. (CMTQB) through its state-run minerals company, Empresa Nacional de Minería (ENAMI)
- ENAMI has been a partner at QB since 1989 and is a 10% shareholder of Carmen de Andacollo
- ENAMI is not required to fund QB2 development costs
- Project equity funding in form of:
  - 25% Series A Shares
  - 75% Shareholder Loans
- Until shareholder loans are fully repaid, ENAMI is entitled to a minimum dividend, based on net income, that approximates 2.0-2.5% of free cash flow
  - Thereafter, ENAMI receives 10% of dividends / free cash flow

## Organizational Chart

# Quebrada Blanca Accounting Treatment

## Balance Sheet

- 100% of project spending included in property, plant and equipment
- Debt includes 100% of project financing
- Total shareholder funding to be split between loans and equity approximately 75%/25% over the life of the project
- Sumitomo (SMM/SC)<sup>1</sup> contributions will be shown as advances as a non-current liability and non-controlling interest as part of equity
- Teck contributions, whether debt or equity, eliminated on consolidation

## Income Statement

- Teck's income statement will include 100% of QB's revenues and expenses
- Sumitomo's<sup>1</sup> 30% and ENAMI's 10% share of profit will show as profit attributable to non-controlling interests

## Cash Flow

- 100% of project spending included in capital expenditures
- Sumitomo<sup>1</sup> contribution recorded within financing activities and split approximately 75%/25% as:
  - Loans recorded as “Advances from Sumitomo”
  - Equity recorded as “Contributions from Non-Controlling Interests”
- 100% of draws on project financing included in financing activities
- After start-up of operations
  - 100% of profit in cash flow from operations
  - Sumitomo's<sup>1</sup> 30% and ENAMI's 10% share of distributions included in non-controlling interest

# QB2 Project Economics Comparison

# Endnotes: Near-Term Copper Growth - QB2 Project

## Slide 50: QB2 Project

1. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures which do not have a standardized meanings prescribed by International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles in the United States. These measures may differ from those used by other issuers and may not be comparable to such measures as reported by others. These measures are meant to provide further information about our financial expectations to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS. For more information on our calculation of non-GAAP financial measures please see our Management's Discussion and Analysis for the year ended December 31, 2018, which can be found under our profile on SEDAR at [www.sedar.com](http://www.sedar.com).

## Slide 51: QB2's Competitive Cost Position

1. Source: Wood Mackenzie. Average 2021-2040.
2. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
3. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

## Slide 52: Large, Long Life Deposit at Quebrada Blanca

1. Reserves and resources as at December 31, 2020.
2. Based on Sanction Case mine plan tonnage.
3. Resources are reported separately from, and do not include that portion of resources classified as reserves.

## Slide 53: QB2 Funding Model

1. Excludes working capital, interest, and COVID-19 capital, includes escalation and contingency, at actual CLP exchange rate.
2. Excludes working capital, interest, and COVID-19 capital, includes escalation and contingency, at 775 CLP exchange rate.
3. Assumes 100% of project finance and partner funding is attributed towards capital spend versus working capital, interest and COVID-19 costs.
4. 2019-2021.

## Slide 56: Quebrada Blanca Accounting Treatment

1. Sumitomo Metal Mining Co. Ltd. and Sumitomo Corporation are collectively referred to as Sumitomo.

## Slide 57: QB2 Project Economics Comparison

1. Based on go-forward cash flow from January 1, 2017. Based on all equity funding structure.
2. Based on go-forward cash flow from January 1, 2019. Based on optimized funding structure.
3. Life of Mine annual average figures exclude the first and last partial years of operations.
4. C1 cash costs are presented after by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
5. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

# Endnotes: Near-Term Copper Growth - QB2 Project

## Slide 58: QB2 Reserves and Resources Comparison

1. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US\$13.39/t over the planned life of mine. The life-of-mine strip ratio is 0.41.
2. Both mineral resource and mineral reserve estimates assume long-term commodity prices of US\$3.00/lb Cu, US\$9.40/lb Mo and US\$18.00/oz Ag and other assumptions that include: pit slope angles of 30–44°, variable metallurgical recoveries that average approximately 91% for Cu and 74% for Mo and operational costs supported by the Feasibility Study as revised and updated.
3. Mineral resources are reported using a NSR cut-off of US\$11.00/t and include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.
4. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US\$18.95/t over the planned life of mine. The life-of-mine strip ratio is 0.70.
5. Mineral resources are reported using a NSR cut-off of US\$11.00/t outside of the reserves pit. Mineral resources include inferred resources within the reserves pit at a US\$ 18.95/t NSR cut-off and also include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.

# Copper Growth Strategy

Teck

# Right Approach: Portfolio of Copper Growth Options

## Value realization through production or M&A

### Teck is positioned to realize value from a robust pipeline of copper projects

- Investment in exploration and strategic M&A over the last 20 years has secured quality opportunities
- Focus on integrated technical, social, environmental and commercial de-risking of opportunities
- Leadership, experience and systems in place to fulfill strategy

### We seek to maximize shareholder returns and maintain a strong balance sheet

- Reduce Teck's equity requirements through partnering, streams, infrastructure carve-outs and project financing
- Maintain investment grade metrics to support strong liquidity
- Rigorous capital allocation framework to balance growth and cash returns

## QB2 Case Study

### De-risked at project sanction:

- ~80% engineered and >70% procured
- Key permits approved

### Reduced equity requirements:

- US\$1.2B transaction payment received
- Partnership further reduced Teck's funding
- US\$2.5B project finance

### Right sized balance sheet:

- Repaid US\$4B in debt<sup>1</sup> and regained investment grade rating

### Return of capital to shareholders:

- C\$1.2B of share buy backs and ~C\$700M in dividends<sup>2</sup>

# Right Approach: Actively Strengthening our Portfolio

Prudent investments in near-term, medium-term, and future growth options

Teck's copper growth portfolio is supported by recent and extensive studies

Holistic portfolio approach to capital allocation

Continue to increase the quality of our medium-term and future potential growth options

Teck is positioned to maximize value from copper demand growth well beyond the ramp-up of QB2

		2017	2021
Near Term	Zafranal Cu-Au	<i>Prefeasibility</i>	Feasibility (Q2 2019) SEIA submission in H2 2021

# Zafranal Cu-Au Porphyry (80%)

## Feasibility complete, SEIA submission in H2 2021<sup>1</sup>

Peru

### Long Life Asset

- 19 year mine life with mine life extension opportunities through pit expansion and district resource development

### Quality Investment

- Attractive front-end grade profile
- Mid cost curve forecast LOM C1 cash costs<sup>2</sup>
- Competitive capital intensity

### Mining Jurisdiction

- Strong support from Peruvian regulators including MINEM and SENACE
- Engaged with all communities

### Path to Value Realization:

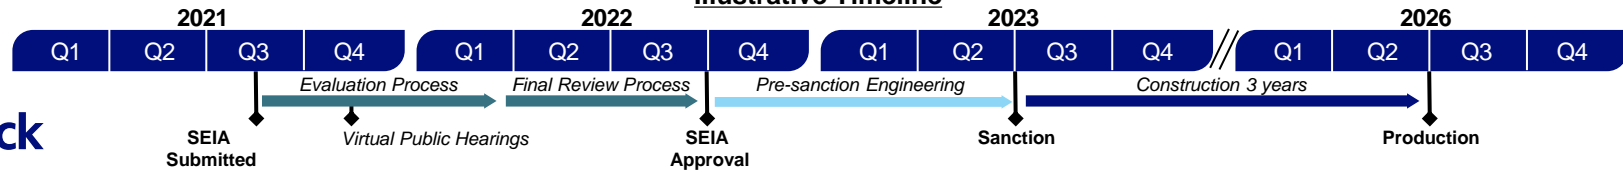

- Continue prudent investments to de-risk the project improving capital and operating costs
- SEIA submission in H2 2021

<b>Initial Capex</b> <b>US\$1.23B</b>	<b>Payback Period</b> <b>2.3 Years</b>	<b>After-Tax NPV<sub>8</sub></b> <b>US\$1.0B</b>	<b>After-Tax IRR</b> <b>23.3%</b>

### Illustrative Timeline

# San Nicolás Cu-Zn (Ag-Au) VHMS (100%)

## Prefeasibility and Environmental Impact Assessment completed<sup>1</sup>

Mexico

### Long Life Asset

- One of the world's most significant undeveloped VHMS deposits
- Updated Resources Statement

### Quality Investment

- Expect C1 cash costs<sup>2</sup> in the 1<sup>st</sup> quartile
- Competitive capital intensity
- Co-product Zn and Au & Ag credits

### Mining Jurisdiction

- Well-established mining district in Mexico
- Community engagement well underway

### Path to Value Realization:

- Prefeasibility and EIA completed in Q1 2021 and Q3 2021
- Assessing partnering and development options

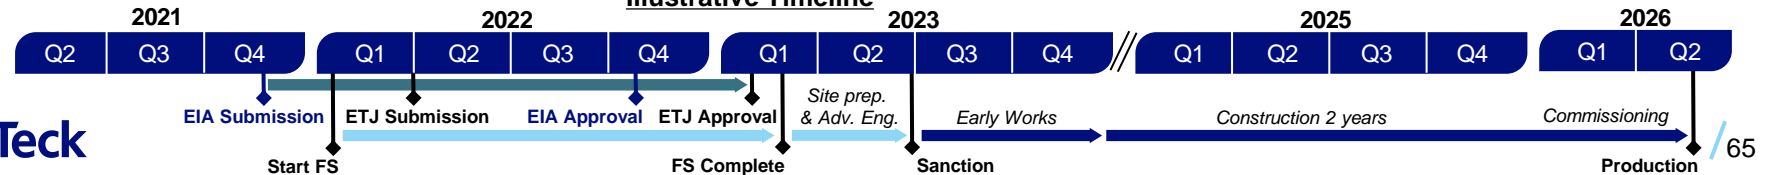

<b>Initial Capex</b> <b>US\$842M</b>	<b>Payback Period</b> <b>2.6 Years</b>	<b>After-Tax NPV<sub>8</sub></b> <b>US\$1.5B</b>	<b>After-Tax IRR</b> <b>32.5%</b>

# Endnotes: Copper Growth Strategy

## **Slide 62: Right Approach: Portfolio of Copper Growth Options - Value realization through production or M&A**

1. Total debt repayment between Q4 2015 and Q3 2019.
2. Share buybacks and dividends since Q4 2017 (one year prior to project sanction).

## **Slide 63: Right Assets: Portfolio of Copper Growth Options - Value optionality guided by commercial discipline**

1. CuEq calculated with price assumptions: US\$3.50/lb Cu; US\$1.15/lb Zn; US\$6.90/lb Ni; US\$21/lb Co; US\$10/lb Mo; US\$1,400/oz Au; US\$18/oz Ag; US\$1,300/oz Pd; \$1,200/oz Pt. Averages exclude first and last partial years of production.

## **Slide 64: Zafranal Cu-Au Porphyry (80%)**

1. Financial summary based on At-Sanction Economic Assessment using: US\$3.50/lb Cu and US\$1,400/oz Au. Detailed Engineering, Permitting and Project Set-up costs not included. All calendar dates and timeline are preliminary potential estimates.
2. EBITDA and C1 cash cost are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
3. First five full years of production.

## **Slide 65: San Nicolás Cu-Zn (Ag-Au) VHMS (100%)**

1. Financial summary based on At-Sanction Economic Assessment using: US\$3.50/lb Cu, US\$1.15/lb Zn, US\$1,400/oz Au and US\$18/oz Ag. Go-forward costs of Prefeasibility, Detailed Engineering, Permitting and Project Set-up costs not included. All calendar dates and timeline are preliminary potential estimates.
2. EBITDA and C1 cash cost are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
3. First five full years of production (Year 2 – Year 6).

## **Slide 66: Medium Term Development Options**

1. QB Hypogene Reserves: 1,432Mt at 0.51% Cu, 0.021% Mo, 1.4 g/t Ag.
2. C1 cash cost is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides. C1 cash cost are shown net of by-product credits. All averages exclude first and last partial years of production.
3. QB Hypogene Mineral Resources (exclusive of reserves) from Teck's 2020 AIF. Estimates were prepared assuming metal prices of US\$3.00/lb Cu and US\$ 9.4/lb Mo, pit slope angles of 30 – 42 degrees and variable metallurgical recoveries.
4. QB Hypogene Mineral Resources are constrained by a pit shell developed using Whittle™ software considering similar assumptions as for Reserves. Resources are reported at Net Smelter Return cut-off of US\$ 8.35/ft.
5. Galore Creek Production potential was calculated with price assumptions: US\$3.50/lb Cu; US\$1,400/oz Au; US\$18/oz Ag.
6. Galore Creek Mineral Resources are estimated using metal price assumptions of US\$3.00/lb copper, US\$1,200/oz gold and US\$20/oz silver using a US\$8.84/t Net Smelter Return cut-off.
7. Galore Creek Mineral Resources are reported within a constraining pit shell developed using Whittle™ software. Inputs to the pit optimization include the following assumptions: metal prices; pit slope angles of 36.3 – 51.9 degrees; variable metallurgical recoveries averaging 90.6% for copper, 73.1% for gold and 64.5% for silver.
8. Galore Creek Mineral Resources have been estimated using a US\$8.84/t Net Smelter Return cut-off, which are based on cost estimates from a 2011 Prefeasibility Study. Assumptions consider that major portions of the Galore Creek Project are amenable for open pit extraction.

## **Slide 67: Right Assets: Portfolio of Copper Growth Options - Multiple high quality copper options**

1. Financials and CuEq calculated with price assumptions: US\$3.50/lb Cu; US\$1.15/lb Zn; US\$6.90/lb Ni; US\$21/lb Co; US\$10/lb Mo; US\$1,400/oz Au; US\$18/oz Ag; US\$1,300/oz Pd; US\$1,200/oz Pt. C1 cash costs are shown net of by-product credits. All averages exclude first and last partial years of production.
2. Financial summary based on At-Sanction Economic Assessment. Go-forward costs of Prefeasibility, Detailed Engineering, Permitting and Project Set-up costs not included.
3. Various paths to expansion including 50% increase, doubling and tripling of throughput.

# Industry Leading Copper Growth

Building on our foundation of quality assets and operating discipline

## Quality assets with strong margins

- Antamina, Highland Valley and Carmen de Andacollo provide a stable, low-cost operating foundation
- QB2 has low strip ratio and AISC<sup>3</sup> in second quartile
- Continuous improvement is core to operating philosophy

## Significant near-term growth and options

- QB2 first production in the second half of 2022
- Teck is positioned to realize value from a robust pipeline of copper projects
- Multiple high-quality near-term (San Nicolas and Zafranal), medium-term (QB3 and Galore Creek) and mine life extension (HVC and Antamina) options

## Gross Profit Margin Before Depreciation & Amortization from Operations Consistently ~45-55%<sup>1</sup>

## Teck Consolidated Copper Production<sup>2</sup> (kt Cu)

Continue to prudently advance the growth portfolio to increase the value and certainty of options

# World Class Zinc Business

Large scale, low-cost integrated business

## Quality assets with strong margins

- Red Dog is a first quartile cash cost operation
- Trail produces refined zinc, lead, and other products with clean, renewable power and strong recycling capabilities

## Integrated business model

- Unique position as largest net zinc miner
- Exposure to price increases and market changes

## Attractive development opportunities

- Significant potential mine life extension in Red Dog district, with large, high grade mineralized system
- Several of the top next generation zinc assets

## Gross Profit Margin before Depreciation & Amortization from Mining Operations Consistently >50%<sup>1</sup>

## Teck Has Several Large Undeveloped Zinc Assets<sup>2</sup>

Maximizing cash flows from quality assets

# Significant Base Metals Cash Flow

Expanding our high-quality Base Metals business

- High quality, growing copper business
- World class zinc business
- Focus on operating discipline
- Significant improvements driven by RACE21™

Building on our foundation of quality assets and operating discipline

# Operations Improvement and Cash Flow Focus in Copper

## Productivity & Cost Management

- Focus on reliability and maintenance and cross site sharing
- RACE21™ and continuous improvement pipeline driving benefits across sites – a key driver of margins
- Cost reductions embedded in plans

## Focused Investment Priorities

- Key water, tailings and regulatory projects drive sustaining capital requirements
- Near-term higher sustaining spending from tailings facility costs at Antamina
- Long-term sustaining capex (2024+) in copper expected at \$125 million, excluding QB2 and life extension projects

# Copper Cost of Sales

## Cost of Sales in 2020 (C\$)

### Operating Costs Breakdown in 2020

Labour	30%
Contractors and Consultants	11%
Operating Supplies	16%
Repairs and Maintenance Parts	16%
Energy	20%
Other	6%
<b>Total</b>	<b>100%</b>

# Operations Improvement and Cash Flow Focus in Zinc

## Productivity

- Focus on asset management and cross site sharing
- RACE21™ and continuous improvement pipeline driving benefits across sites – a key driver of margins
- Cost reductions embedded in plans

## Focused Investment Priorities

- Key water, tailings and regulatory projects drive sustaining capital requirements
- Near term higher sustaining spending from tailings related projects at Red Dog and air quality and asset renewal at Trail Operations
- Long-term sustaining capex (2024+) in zinc expected at \$150 million, excluding life extension projects

# Zinc Cost of Sales

## Cost of Sales in 2020 (C\$)

## Operating Costs Breakdown in 2020

Labour	35%
Contractors and Consultants	10%
Operating Supplies	11%
Repairs and Maintenance Parts	9%
Energy	18%
Other	17%
<b>Total</b>	<b>100%</b>

# Red Dog Sales Seasonality

- Operates 12 months
- Ships ~ 4 months
- Shipments to inventory in Canada and Europe; Direct sales to Asia
- ~65% of zinc sales in second half of year
- ~100% of lead sales in second half of year
- Sales seasonality causes net cash unit cost seasonality

**Zinc Sales<sup>1</sup> (%)**

**Lead Sales<sup>1</sup> (%)**

# Red Dog Net Cash Unit Cost Seasonality

Five-Year Average Red Dog Net Cash Unit Costs<sup>1</sup> (US\$/lb)

- Seasonality of Red Dog unit costs largely due to lead sales during the shipping season
- Higher net cash unit costs expected in 2021 compared to 2020 due primarily to lower production volumes in 2020, as well as lower contribution from silver by-products

# Red Dog in Bottom Quartile of Zinc Cost Curves

Higher zinc prices illustrate continuing tight market

## Total Cash + Capex Cost Curve 2021<sup>1</sup> (US¢/lb)

# Red Dog Extension Project

## Long Life Asset

- Aktigiruaq exploration target of 80-150 Mt @ 16-18% Zn + Pb<sup>1</sup>
- Anarraaq Inferred Resource<sup>2</sup>: 19.4 Mt @ 14.4% Zn, 4.2% Pb

## Quality Project

- Premier zinc district
- Significant mineralized system
- High grade

## Stable Jurisdiction

- Operating history
- ~12 km from Red Dog operations

# Endnotes: Base Metals Business Units

## Slide 70: Significant Base Metals Growth - Teck's Base Metals business rivals leading copper peers

1. Production for 2020 reflects actuals sourced from company disclosures. Production for 2023 is sourced from Wood Mackenzie asset models, considering assets included in Wood Mackenzie's base case for each company. Production is shown on a consolidated reporting basis. Copper equivalent production for 2020 is calculated using annual average prices of: US\$2.83/lb Cu, US\$1.05/lb Zn, US\$0.85/lb Pb, US\$8.68/lb Mo, US\$1,779/oz Au, US\$20.70/oz Ag, US\$6.43/lb Ni. Copper equivalent production for 2023 is calculated using the following prices: US\$3.50/lb Cu, US\$1.15/lb Zn, US\$0.90/lb Pb, US\$10.50/lb Mo, US\$1,650/oz Au, US\$22.50/oz Ag, US\$6.90/lb Ni.
2. Teck's contained equivalent copper metal at 100% basis for all Copper and Zinc assets. See Teck's 2020 AIF for further information, including the grade and quantity of reserves and resources for these assets and the grade of the other metals used to determine the copper equivalent. Contained equivalent copper metal for peers are sourced from SNL Financial – S&P Global Market Intelligence. Copper equivalent is calculated using prices of: US\$3.50/lb Cu; US\$1.15/lb Zn; US\$6.90/lb Ni; US\$21/lb Co; US\$10/lb Mo; US\$1,400/oz Au; US\$18/oz Ag; US\$1,300/oz Pd; US\$1,200/oz Pt.

## Slide 71: Significant Base Metals Growth - Teck's Base Metals business rivals leading copper peers

1. Production for 2020 reflects actuals sourced from company disclosures. Production for 2023 is sourced from Wood Mackenzie asset models, considering assets included in Wood Mackenzie's base case for each company. Production is shown on a consolidated reporting basis, except where noted as attributable for ownership. Copper equivalent production for 2020 is calculated using annual average prices of: US\$2.83/lb Cu, US\$1.05/lb Zn, US\$0.85/lb Pb, US\$8.68/lb Mo, US\$1,779/oz Au, US\$20.70/oz Ag, US\$6.43/lb Ni. Copper equivalent production for 2023 is calculated using the following prices: US\$3.50/lb Cu, US\$1.15/lb Zn, US\$0.90/lb Pb, US\$10.50/lb Mo, US\$1,650/oz Au, US\$22.50/oz Ag, US\$6.90/lb Ni.
2. 2020 C1 cash cost data is sourced from company disclosures and are for copper operations only. Expected 2023 C1 cash cost data is sourced from S&P Global Market Intelligence (formerly SNL Metals & Mining) cost curve database considering primary copper mines and total cash costs on a by-product basis for Teck and peers, and weighted on a consolidated production basis.
3. Enterprise Value, or Total Enterprise Value is as of market close on January 10, 2022 and is sourced from S&P Capital IQ.

## Slide 72: Industry Leading Copper Growth

1. Calculated as reported Gross Profit before D&A divided by reported Revenue, sourced from Teck's public disclosures. Margin data from 2017-2020 are for the full year, while margin data for 2021 reflects available results through the first half of 2021 only. Gross Profit Before Depreciation & Amortization Margin from Operations is a non-GAAP financial measure.
2. We include 100% of production from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes, even though we do not own 100% of these operations, because we fully consolidate their results in our financial statements. We include 22.5% of production from Antamina, representing our proportionate ownership interest in the operation. QB2 is on a consolidated basis and is based on the QB2 Sanction Case first five full years of copper production.
3. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures which do not have a standardized meanings prescribed by International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles in the United States. These measures may differ from those used by other issuers and may not be comparable to such measures as reported by others. These measures are meant to provide further information about our financial expectations to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS. For more information on our calculation of non-GAAP financial measures please see our Management's Discussion and Analysis for the year ended December 31, 2018, which can be found under our profile on SEDAR at [www.sedar.com](http://www.sedar.com).

## Slide 73: World Class Zinc Business

1. Mining operations only, and therefore excludes Trail. Calculated as Gross Profit before D&A divided by reported Revenue, sourced from Teck's public disclosures. Margin data from 2017-2020 are for the full year, while margin data for 2021 reflects available results through the first half of 2021 only. Gross Profit Margin Before Depreciation & Amortization from Mining Operations is a non-GAAP financial measure.
2. Sources: S&P Global Market Intelligence, SNL Metals & Mining Database, Teck Public Disclosures.
3. 80-150 Mt @ 16-18% Zn + Pb. Aktigiruiq is an exploration target, not a resource. Refer to press release of September 18, 2017, available on SEDAR. Potential quantity and grade of this exploration target is conceptual in nature. There has been insufficient exploration to define a mineral resource and it is uncertain if further exploration will result in the target being delineated as a mineral resource.
4. Inferred resource of 58 Mt @ 11.1% Zn and 1.5% Pb, at a 6% Zn + Pb cut off, estimated in compliance with the Joint Ore Reserves Committee (JORC) Code. Excludes Myrtle.

## Slide 76: Copper Unit Costs

1. Copper unit costs are reported in US dollars per pound. Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

# Endnotes: Base Metals Business Units

## **Slide 78: Zinc Unit Costs**

1. Zinc unit costs are reported in US dollars per pound. Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

## **Slide 79: Red Dog Sales Seasonality**

1. Average sales from 2016 to 2020.

## **Slide 80: Red Dog Net Cash Unit Cost Seasonality**

1. Average quarterly net cash unit cost in 2016 to 2020, before royalties. Based on Teck 's reported financials. Net cash unit cost is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

## **Slide 81: Red Dog in Bottom Quartile of Zinc Cost Curves**

1. Source: Data compiled by Teck from information from Wood Mackenzie, LME – Based on WM Forecast information and estimates for 2021 based on current short term average prices.

## **Slide 82: Red Dog Extension Project**

1. Aktigiruj is an exploration target, not a resource. Refer to press release of September 18, 2017, available on SEDAR. Potential quantity and grade of this exploration target is conceptual in nature. There has been insufficient exploration to define a mineral resource and it is uncertain if further exploration will result in the target being delineated as a mineral resource.
2. Based on Teck's 2020 Annual Information Form.

# Copper Market

# Copper Supply Needed for Electrification Targets

Supply committed pre-pandemic insufficient to meet growing demand

## Supply response falling short

- >80% of the current committed mine projects were sanctioned prior to the pandemic
- Under an IEA 1.5 degree scenario, copper demand will grow by >12 Mt in the next 10 years
- In the last 20 years (China growth), copper mine production only grew 7 Mt
- Only 2.4 Mt is committed over the next five years

## Demand accelerating in mid-term

- Automakers are raising five-year targets for EV fleets; up by 18% in the last six months
- Wind and solar driven by corporate agendas
- Current electric grid requires >10% increase to meet near term targets of 40% EV penetration

## Copper Mine Growth<sup>1</sup> (kt)

## EV Change in Projected Growth

### Last Six Months<sup>2</sup> (BEV + PHEV M units)

Teck well positioned for future copper demand growth

# Copper Market

## Physical inventories continue to tighten

### Available Stocks Drop to Historic Lows<sup>1</sup>

### Copper Scrap is 18% of Supply and 20% of Total Demand<sup>2</sup>

Cathode Demand 23.6 Mt

Copper Demand 29.6 Mt

- Demand for raw materials and mine disruptions keep concentrate demand high
  - Mine production cuts YTD 2021 ~0.6 Mt
  - Spot TC/RC mid-50's to low 60's
  - 2022 Annual Terms reported at \$65/6.5
- LME price supported on low LME inventories
- SHFE stocks continue to fall to 2009 lows
- Exchange inventories now lowest since 2006
- Scrap availability remains tight, shipments restricted by logistics issues
- Tight scrap market is pushing cathode premiums higher; Chinese cathode premiums US\$80-\$100 per tonne in Q4 2021

# Global Copper Mine Production Increasing Slowly

Majority of mine growth coming from 6 projects

## Mine Production Set To Increase 2.6Mt By 2026<sup>1</sup>

Includes:

Mine	kmt
Kamoa – Kakula	540
Quellaveco	390
PT – Freeport	360
Quebrada Blanca 2	330
Oyu Tolgoi	250
Tenke Fungurume Mill	200
All others (Spence, Chuqui UG, Qulong)	2,775
SXEW Reductions to 2024	(320)
Reductions & Closures	(2,000)

- Chinese mine production flat to 2026 on lack of resources
- Total probable projects: 1.6Mt
- Mine reductions and closures reducing supply post 2024

## Global Copper Mine Production<sup>2</sup> (kt contained)

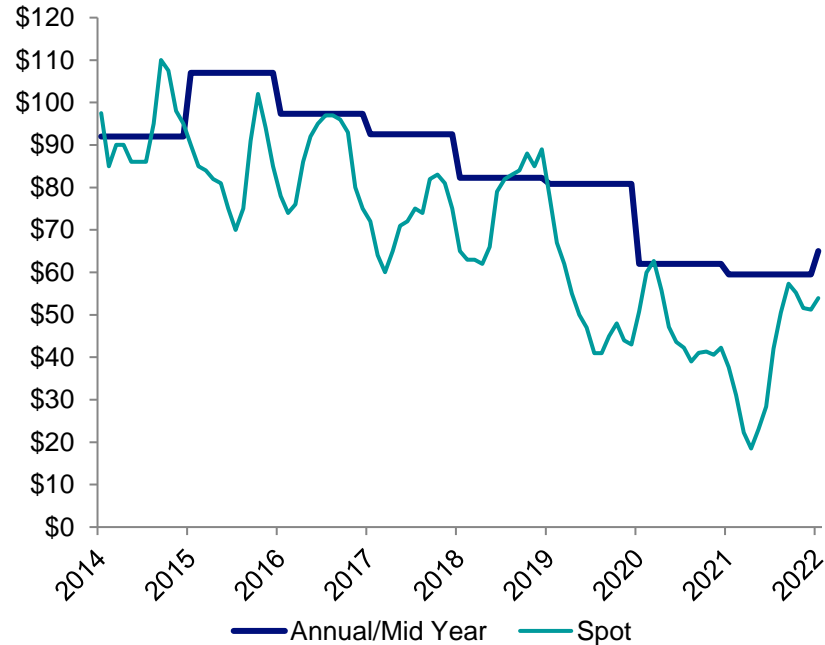

# Copper Disruptions Continue To Impact Mines

Smelters now facing power supply issues

### TC/RCs Spot and Annual Remain Low<sup>1</sup> (US\$/lb)

### Disruptions (kt)<sup>2</sup>

# Growth in Copper Smelter Capacity

China added 3.2 Mt since 2019; 2.6 Mt of new announcements ex-China

## Copper Mine Growth<sup>1</sup> (kt)

## +1.9 Mt of New/Restarted Chinese Smelting Capacity +2.6 Mt of Ex-China Capacity

# Copper Supply

Chinese imports shift to concentrates to feed smelter capacity increases

### Chinese Scrap/Blister Imports Fall<sup>2</sup> (Copper content, kt)

- Reclassified scrap/blister rising off the 2020 lows

### Chinese Imports Shift to Concentrates<sup>3</sup> (Copper content, kt)

- Cathode imports drop in 2021, after tight concentrates and scrap market in 2020 saw record cathode imports
- Concentrates imports continue to rise on smelter demand

# Copper Metal Stocks

## Raw material shortages increase cathode demand

- Global stocks fell 470 kt in H2 2021, now equivalent to 5.4 days of global consumption
- Exchange stocks (LME/SHFE/Comex) fell 225kt in H2 2021 now 2.4 days of global consumption
- In 2021 global copper inventories fell 58% in H2, and were down 42% for the year
- Underlying demand remains supported despite cuts to power supplies; supply chain inventories low
- Restocking to historic inventory levels would require ~400kt of copper cathode above current demand growth projections,
- To get to long term average “Days of Consumption” (17 days) would require ~800kt of additional cathode

Daily Copper Prices (US\$/mt) and Stocks<sup>1</sup> (kt)

# Endnotes: Copper Market

## **Slide 86: Copper Supply Needed for Electrification Targets**

1. Copper concentrate supply and smelter demand 2019 – 2020 actuals and 2021 – 2026 forecasts, includes committed projects and projected 4% disruption allowance. Wood Mackenzie, CRU, Teck. As at November 25<sup>th</sup>, 2021.
2. Change in BEV/PHEV market share projections by global auto makers. Source: CRU.

# Zinc Market

Teck

# Zinc Outperforms Market Expectations

High power cost supports Zn metal pricing with little impact on concentrates

## Concentrate market tight through 2021

- Spot TCs unchanged all year at historically low levels
- China energy shortages had minor impact on Chinese smelters
- Chinese mine production growth continues to be limited
- South American supply/logistics continued to struggle
- European smelter cuts impact less on tight concentrate market

## Metal market better than projected

- Chinese mine supply did not deliver as analysts projected
- Galvanized steel demand strong globally, coming off record high prices and low inventories
- Auto production backlog expected to continue into 2022
- Ex-China infrastructure spending to continue, energy sector under invested
- Decarbonization trend will be steel intensive
- Galvanizing steel extends service life, reduces scrapping
- European energy crisis driving potential zinc metal cuts - results in price spike and increase in physical premiums. Euro premiums currently near record highs

## China Zinc Concentrate Supply<sup>1</sup> (Kmt)

## Global Visible Stocks<sup>2</sup> (kt)

# Zinc Market

## Raw materials shortages and strong demand support prices

### Steel Demand Supporting Zinc Price<sup>1</sup>

### Zinc Tied to the Protection of Steel for 60% of Total Demand<sup>2</sup>

#### Zinc Demand 13.1 Mt

#### Zinc End Uses 13.1 Mt

- Demand for raw materials and mine disruptions due to COVID-19 kept concentrate demand strong
  - Ongoing spread of the virus and COVID-19 protocols continued to impact production in 2021
  - Omicron variant and its high transmissibility have further threatened recovery
  - Despite return of mine production, concentrate supply remains tight; Spot TCs have remained stable in 2021, currently at ~US\$85/dmt
- Construction, infrastructure, and automobile demand driving zinc demand in China
  - Galvanized utilization rates rebounded after Lunar New Year to 91% in March '21 and has since averaged 86%, well above the long-term average of 78%
  - China zinc premiums remain above ~US\$100/t for ten straight months so far
  - Power cuts will likely impact demand over the winter, but seasonally not surprising

# Chinese Zinc Mine and Smelter Production

Mine production flat while smelter production increases

**Chinese Mine Production Flat Since 2018<sup>1</sup>**  
(kt Contained)

**Chinese Refined Production Up 14% Since 2018<sup>2</sup>**  
(kt Contained)

Delayed projects and decreasing ore grades continue to impact Chinese mines

# Global Zinc Mine Production Remains Under Pressure

Ongoing risk to supply growth in 2022

## Estimated Chinese Zinc Mine Growth Rarely Achieved<sup>1</sup> (Kmt Contained)

## Changes in Mine Production Since Q1 2018<sup>2</sup>

## Zinc Ore Grades Falling at Chinese Mines<sup>3</sup> (Ore grade, zinc %)

# Zinc Stocks Continue to Decrease Despite Refined Production Increases in China

**De-stocking Continues**  
**Chinese Stocks at Record Lows<sup>1,2</sup> (kt)**

**Imported Zinc Metal**  
**Required to Fill the Gap<sup>3</sup> (kt)**

- December 2021 stocks down 29% yoy; down 85% from decade-ago high
- SRB released stocks for first time since 2012 in an attempt to influence prices; Prices have not responded and stocks have continued to decline since June
- Increasing metal imports required to meet ongoing demand growth and supply constraints

# Zinc Supply

## Mine production increasing in 2022, but remains at risk due to COVID-19

- Mine production recovered in South America, after losing >1.0 Mt of production in 2020; production may return to 2018 levels in 2022
- Chinese mine production up was up 1.8% in 2021 but showed no growth over 2019 levels, while smelter capacity grew 6.5% in China over the period.
- Following the return of South American mine production after COVID-19 shutdowns, smelters in China bid more aggressively for imported concentrates
- 2022 global zine mine production is forecast to grow 1.4% over 2021.
- Global smelter production capacity is forecast to be up 3.3% in 2022

# Zinc Concentrate Treatment Charges

Stable in 2021, near historical lows

# Zinc Metal Stocks

Global shipping backlog unable to keep up with demand causing falling inventory

- Deficits over past 5 years drove down stocks, with total stocks falling to just 6.5 days of global consumption, compared to 38 days in 2012-2013
- Escalating demand reduced stock by 37% since recent March 2021 peak.
- Smelter cuts in Europe expected to tighten stocks further, particularly in the European market
- Ground logistics issues having significant effect in North America and Europe
- 2022 starting with lower inventory than 2021
  - SHFE stocks up less than 28 kt over July low despite SRB release of 180 kt into domestic market

# Largest Global Net Zinc Mining Companies

## Teck is the Largest Net Zinc Miner<sup>1</sup>(kt)

Provides significant exposure to a rising zinc price

# Endnotes: Zinc Market

Fully Integrated  
Operating Mines

**~27**

Mtpa  
Steelmaking Coal  
Production Capacity  
(attributable)

- Diversified, long term customer base
- Stable long term strip ratio
- Long term production run rate of 26-27 million tonnes per annum
- Positive social license with a history of 50+ years of continuous operations
- Integrated operations and supply chain with dedicated market access

Proven commitment to responsible mining through innovation

# Steelmaking Coal Operating Strategy

## Optimized Supply Chain

- Improved market access and reliability for customers
- Pit to port integration maximizes short and long term Elk Valley synergies

## Increase Margins Not Volumes

- Strategically replaced high cost tonnes with low cost tonnes – **Elkview Plant Expansion**
- Leveraging technology to lower unit costs and increase throughput – **RACE**

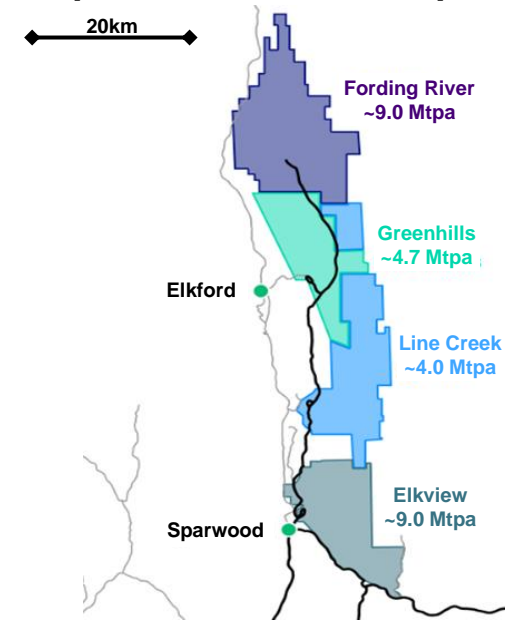

## Innovation Drives Best in Class Productivity and Asset Utilization

- Leaders in haul truck productivity improvement
  - Record 2020 haul truck productivity
- Asset life cycle optimization to minimize capital investment requirements; Advanced plant & mining analytics

## Commitment to Strong Social and Environmental Performance

- Improving water quality
- Reducing carbon footprint

## Map and Production Capacity<sup>1</sup>

-800 Mt of reserves<sup>2</sup> support long term production run rate of 26-27 million tonnes per annum

# Executing on the Elk Valley Water Quality Plan

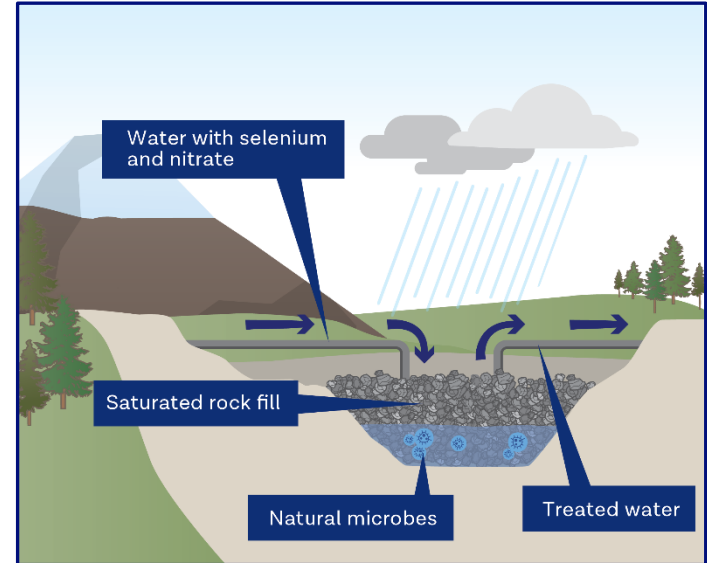

## Active Water Treatment Facilities (AWTF)

- Tank based biological treatment process removes nitrate and transforms selenium into a solid form

## Saturated Rock Fill (SRF)

- Uses naturally-occurring biological process in old mining areas that are backfilled with rock and saturated with water

## Saturated Rock Fill (SRF)

Tripling treatment capacity in 2021 >50 million litres per day; 90 million litres per day by 2025

# Optimally Positioned For a Decarbonizing Future

- Teck's premium hard coking coal improves blast furnace efficiency and decreases CO<sub>2</sub> emissions per tonne of steel
- Within the lowest carbon performance of the commodity range, assisted by access to low carbon sources of electricity in B.C.
- Evaluating renewable and alternative energy sources and storage capabilities and introducing efficient and emissions-free fleet technology

## Steelmaking Coal CO<sub>2</sub> Intensity Curve<sup>1</sup> (t CO<sub>2</sub>e/t saleable coal)

Will be even more cost competitive  
with rising CO<sub>2</sub> prices globally

Highest quality HCC leading to amongst the lowest CO<sub>2</sub> emissions in steelmaking coal

# Proven Operator, Managing for Margin And Costs Through Cycles

## Low Price Environment

Cost focus to protect margins and maximize Free Cash Flow<sup>1</sup>

- ★ 2013: Cost Reduction Program (CRP) is introduced
- 1 2013-2016: Operating Excellence drives cost reduction and productivity improvement
- 3 2020: CRP in response to pandemic disruption

## High Price Environment

Production focus to capture high margins and maximize Free Cash Flow<sup>1</sup>

- 2 2016-2019: Historic bull-run focused on maximizing Free Cash Flow<sup>1</sup>
- 4 Q4 2020+: Product and sales strategy to maximize record CFR China prices

## Steelmaking Coal Impairment Adjusted EBITDA<sup>1</sup> & Impairment Adjusted EBITDA Margin<sup>1</sup> (%)

Strong EBITDA<sup>1</sup> and EBITDA Margin<sup>1</sup> generation potential through all cycles

# Top Quartile Margins in Steelmaking Coal

## Managing our Core Business Drivers to Optimize Margins

- Neptune capacity increase and third-party logistics contracts
  - Lowering port costs, increase logistics chain flexibility and improved reliability
- RACE21™ transformation
  - Lowering operating costs and increasing EBITDA<sup>1</sup> potential
- Stable long term strip ratio, maintaining best in class truck productivity
- Strong margins in any market with exceptional cash generating potential

## Strong Cash Flow Generation Potential<sup>2</sup>

	Clean Coal Production per Annum	Change	Estimated Effect on Annualized Profit <sup>3</sup>	Estimated Effect on Annualized EBITDA <sup>3</sup>
Coal	26 Mt	US\$50/t	C\$950M	C\$1,500M

## Seaborne Steelmaking Coal Delivered Operating Margin<sup>4</sup>

Steelmaking coal competitively positioned to continue to deliver strong returns

# Steelmaking Coal Cost of Sales

## Cost of Sales in Q3 2021 YTD

Operating Costs Breakdown	
Labour (Internal & External)	49%
Operating Supplies and Parts	36%
Energy	17%
SG&A & Other Costs	5%
Change in Inventory	(7%)
<b>Total</b>	<b>100%</b>

# Sustain Production Capacity and Productivities In Steelmaking Coal

## Maintaining historical dollar per tonne sustaining investment levels

### 2010-2016: Average spend of ~\$11 per tonne<sup>1</sup>

- Swift at Fording River and Line Creek
- Reinvestment in 5 shovels, 50+ haul trucks

### 2017-2024: Average spend of ~\$11-13 per tonne<sup>1</sup>

- Plant expansion at Elkview, mine life extension projects and Neptune sustaining investments
- Reinvestment in equipment fleets and infrastructure to increase mining productivity and processing efficiencies

## Sustaining Capital, Excluding Water Treatment<sup>1</sup> (\$/t)

Long term run rate for sustaining capital is ~\$11-13 per tonne

# Haul Truck Rebuild Strategy

Successful pilot completed; potential to significantly reduce capital costs

## Significant benefits from moving to a haul truck rebuild strategy vs. replacing 930E trucks at the end of truck life

- Reduces capital spending for new truck purchases
- Increases fleet operating hours
- Reduces fleet operating costs

## Expected to reduce capex by ~\$300-350 million over 10 years, with an NPV<sup>1</sup> of ~C\$150-175 million and a payback of ~4.6 years

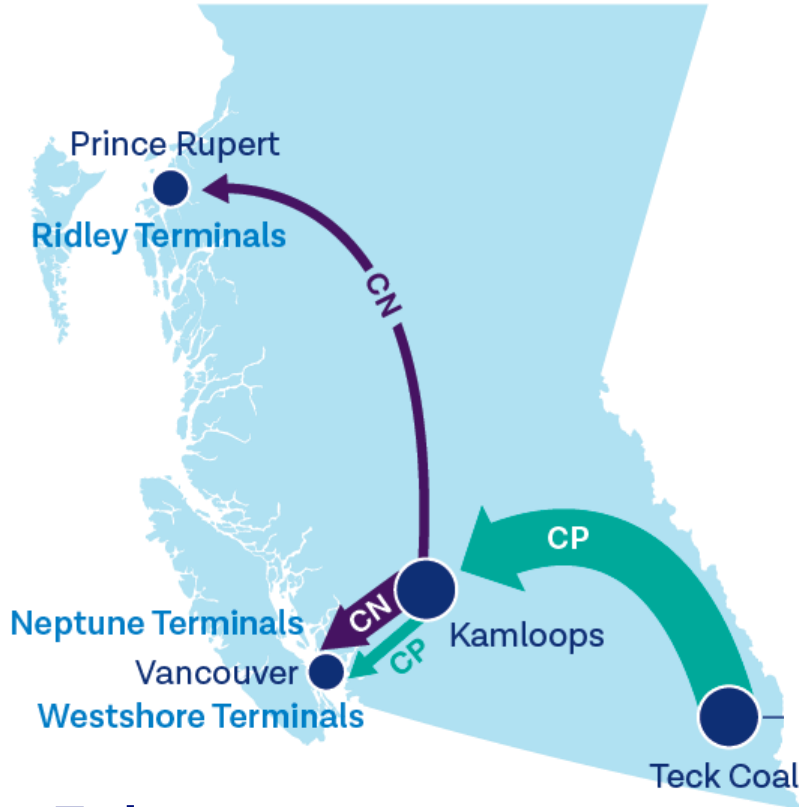

- Components will be replaced at time of rebuild as condition dictates. There is also additional opportunity to further reduce capex requirements by rebuilding frames
- Assumes cost savings of ~C\$4.5 million per truck, or 47%, based on the cost of a new 930E-5SE truck of ~C\$8.5 million and the cost of an average 930E-4 rebuild of ~C\$4.0 million

Opportunity to extend the program to other vehicles in the fleet

# Steelmaking Coal Supply Chain Overview

*Teck contracted port capacity of >31.5Mtpa to support production*

**Teck**

## Neptune Terminal >18.5Mtpa

- Teck 100% ownership of coal capacity
- Teck's primary terminal for market access, with competitive cost of service structure

## Westshore Terminals contract for 5-7Mtpa

- Expires Q4 2027, unless volumes consumed earlier
- Agreement provides volume flexibility

## Ridley Terminals contract up to 6Mtpa

- Expires Q4 2027
- Provides alternative for sprint and recovery volume

## Rail

- Commercial arrangements in place with CP Rail and CN Rail to support fluid movement of trains to all three terminals

# Endnotes: Steelmaking Coal Business Unit

1. The 12-year historical average annual Impairment Adjusted EBITDA and Impairment Adjusted EBITDA Margin are for the 2009 to 2020 period, inclusive. Impairment Adjusted EBITDA and Impairment Adjusted EBITDA Margin are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

## **Slide 107: Steelmaking Coal Operating Strategy**

1. Metallurgical Clean Coal production capacity from Teck's 2020 Annual Information Form, shown on an attributable basis to Teck (80% Greenhills).
2. Metallurgical Clean Coal Mineral Reserves from Teck's 2020 Annual Information Form. Reserves is shown on a mine and property total and is not limited to Teck's proportionate interest, annual production supported by reserves is shown on an attributable basis to Teck (80% Greenhills).

## **Slide 109: Optimally Positioned For a Decarbonizing Future**

1. Source: Skarn Associates, Q2 2021 update to 2020 dataset for global carbon intensity performance of steelmaking coal assets. Includes Scope 1 and 2 emissions.

## **Slide 110: Proven Operator, Managing for Margin and Costs Through Cycles**

1. Free Cash Flow, EBITDA, Impairment Adjusted EBITDA, EBITDA Margin, Impairment Adjusted EBITDA Margin are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
2. Annualized.

## **Slide 111: Top Quartile Margins in Steelmaking Coal**

1. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.
2. Sensitivities from Teck's 2020 Annual Report. The sensitivity of our annual profit attributable to shareholders and EBITDA to changes in the Canadian/U.S. dollar exchange rate and commodity prices, before pricing adjustments, based on a 26.0 million tonne production volume estimate, our current balance sheet, current commodity prices and a Canadian/U.S. dollar exchange rate of \$1.30. See Teck's Q4 2020 press release for further details.
3. The effect on our profit attributable to shareholders and on EBITDA of commodity price and exchange rate movements will vary from quarter to quarter depending on sales volumes. Our estimate of the sensitivity of profit and EBITDA to changes in the U.S. dollar exchange rate is sensitive to commodity price assumptions. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.
4. Source: Teck, Wood Mackenzie Seaborne Metallurgical Coal Cost Curve August 2021. Teck's total cost includes royalties normalized to Wood Mackenzie's 2021 FY FOB Australia HCC price assumption of US\$130.74 per tonne.

## **Slide 113: Sustain Production Capacity and Productivities in Steelmaking Coal**

5. Historical spend has not been adjusted for inflation or foreign exchange. 2021-2025 average spend assumes annualized average production of 27 million tonnes. All dollars referenced are Teck's portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of sustaining capital relating to water treatment. Sustaining capital is now inclusive of production capacity investments previous called Major Enhancement. Excludes capital leases and growth capital.

## **Slide 114: Haul Truck Rebuild Strategy**

1. Assumes 71 trucks rebuilt over a ten-year period at a Canadian/U.S. dollar exchange rate of 1.30 and an 8% discount rate. Project economics are shown on a 100% basis and do not deduct for portion attributable to joint venture partner.

# Steelmaking Coal Market

# Steelmaking Coal Facts

## **Global Coal Production<sup>1</sup>:**

~7.6 billion tonnes

## **Steelmaking Coal Production<sup>2</sup>:**

~1,150 million tonnes

## **Export Steelmaking Coal<sup>2</sup>:**

~320 million tonnes

## **Seaborne Steelmaking Coal<sup>2</sup>:**

~285 million tonnes

- ~0.7 tonnes of steelmaking coal is used to produce each tonne of steel<sup>3</sup>
- Up to 100 tonnes of steelmaking coal is required to produce the steel in the average wind turbine<sup>4</sup>

**Our market is seaborne hard coking coal<sup>2</sup>: ~190 million tonnes**

# Steelmaking Coal Prices Resilient Despite Import Ban

## Australian banned exports absorbed by strong Ex-China steel market

### Steelmaking coal prices surge despite import ban

- Both FOB Australia and CFR China prices remain at historical high levels despite falling from peak
- Chinese steel production slowing to 1.03 Gt from 2020's 1.065 Gt
- Chinese mine supply constrained on quality, logistics, and ongoing safety inspections
- Imports from Mongolia restricted due to COVID
- Australian coal stranded at China ports since October 2020 being cleared (out of 5~6Mt, 3.4Mt cleared in Oct-Nov 2021)
- Ten-year average seaborne FOB price of ~US\$175/t, or US\$180/t on an inflation-adjusted basis<sup>1</sup>

### Steel prices support steel mill margins

- Steel prices remain well above historic levels though demand slows going into winter
- HRC prices remains 1.6-2.4times the lowest level seen in 2020
- Strong demand to continue to underpin production and raw material prices into 2022

### Steelmaking Coal Prices<sup>1</sup> (US\$/t)

### Hot Rolled Coil Prices<sup>2</sup> (US\$/t)

Rising demand exceeds market's ability to adjust to trade dispute

# Australian Coal Ban Absorbed

Displaced Australian coal taken up by ex-China market

## Australian HCC finds new homes; market pivots

- Australian coal banned; ROW to fill the Chinese gap
- Australian exports to China drop to zero from ~34Mt
- Increased demand ex-China & repositioning absorbed Australian HCC; took market ~6 months to sort out logistics/supply
- No indication of change to import ban into 2022

## China remains short steelmaking coal

- China relied on increased domestic production, imports from Mongolia, Canada/USA & others
- Mongolia down -41% YTD due to COVID-19 (2021: -10 Mt)
- Domestic production +6 Mt YTD, estimated +6 Mt for 2021
- Seaborne imports ex-Australia up +168% YTD, estimated +20 Mt for 2021
- China short ~15 Mt in 2021 based on historic imports and production

## Australian HCC Exports<sup>1</sup> (Mt)

## China HCC Imports<sup>2</sup> (Mt)

Teck capitalized on Chinese market opportunity while maintaining existing contracts

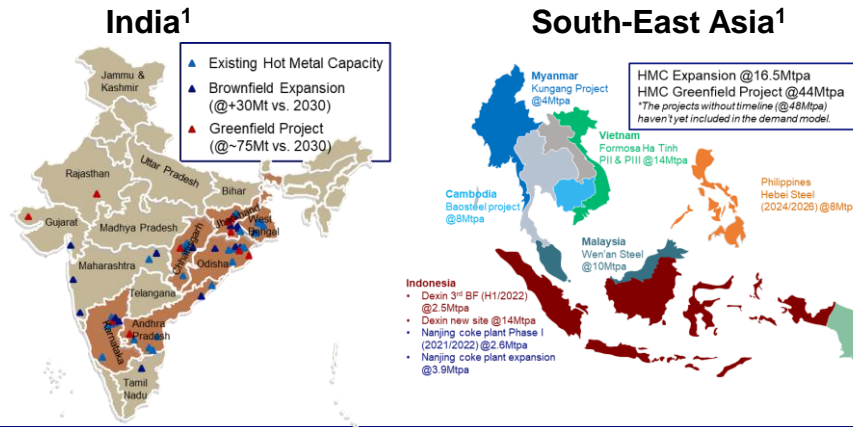

# Long Term Steelmaking Coal Demand Well Supported

## Planned blast furnace capacity set to grow

### Asian blast furnace capacity continues to grow

- Asia committing to 20+ years of traditional steel making
- European steel mills seek alternatives to coal feed
- Hydrogen pilot plants only, commercial technology still decades away and currently prohibitively expensive
- Seek alternative carbon abatement in CCS/CCUS

### Blast Furnace Capacity<sup>2</sup> (Mt)

Financial commitments being made for multi-decade traditional steel making

# Steelmaking Coal Demand Growth Forecast

Recovery continues to be reflected by strong steel demand

## Seaborne Steelmaking Coal Imports<sup>1</sup> (Mt)

Change 2019 to 2022

*Includes:*

- China: Impact of the ban on Australian coal, domestic production limited up, Mongolian imports down further
- Europe/JKT: All banked furnaces restarted in 2021

- India: Growing steel production; unchanged long-term fundamentals
- Brazil: Strong domestic demand (residential construction, automotive) and export market
- SE Asia: Economic recovery

# Indian Steelmaking Coal Imports

Mid- & long-term imports supported by strong demand and government targets

## Indian Crude Steel Production<sup>1</sup> (Mt)

## Indian Seaborne Coking Coal Imports<sup>2</sup> (Mt)

India 2021 crude steel production and seaborne coking coal imports surpassing 2019 levels

# Chinese Steelmaking Coal Imports – Australia Ban

2021 ex-Australia seaborne imports up to new record high of 33Mt

## Chinese Crude Steel Production (CSP), Hot Metal Production (HMP) and Coal Production (Mt)<sup>1</sup>

## Chinese Coking Coal Imports<sup>2</sup> (Mt)

## China annualized domestic production slightly up, Mongolia imports down -41%

- Coking Coal production up +6 Mt YTD November; Safety inspections to limit forward growth
- Mongolian coking coal imports down -20 Mt vs. 2019... pandemic closes borders reduces imports
- Australia imports (5~6Mt) are the cargos stranded in ports since the October 2020 Ban

# Chinese Steel Margins

Steel margins remain healthy

## China Hot Rolled Coil (HRC) Margins and Steelmaking Coal (HCC) Prices<sup>1</sup> (US\$/t)

# Chinese Scrap Use Remains Low

Scrap supply limits EAF share in steel output

China's scrap ratio lower than global average of 31%<sup>1</sup>  
(2020)<sup>2</sup>

China Steel Use By Sector  
(2000-2020)<sup>3</sup>

EAF share forecast to rise to 17% by 2025<sup>4</sup>

# Steelmaking Coal Supply Growth Forecast

Supply partially recovers; while crude steel production up significantly

## Seaborne Steelmaking Coal Exports<sup>1</sup> (Mt)

Change 2019 to 2022

- Australia: Production to increase in 2022 from restarts/projects
- USA: YTD Nov exports up 7% on higher CFR prices, but still down 8.5% over 2019 on production/logistics issues
- Canada: Growth restricted due to wildfires, floods and rail disruptions
- Russia: The growth is mainly low quality coking coal and PCI; Railway capacity is the main constrain.
- Mozambique: Production slowly ramps up
- Indonesia: Production to rise from new mines

# Australia and US Steelmaking Coal Exports

2021 Australia and US coal exports down vs. 2019

## Australian Exports<sup>1</sup> (Mt)

## US Exports<sup>2</sup> (Mt)

# Canadian & Mozambique Steelmaking Coal Exports

2021 Canadian exports impacted by B.C. wildfires, floods and railway disruptions

## Canadian Exports<sup>1</sup> (Mt)

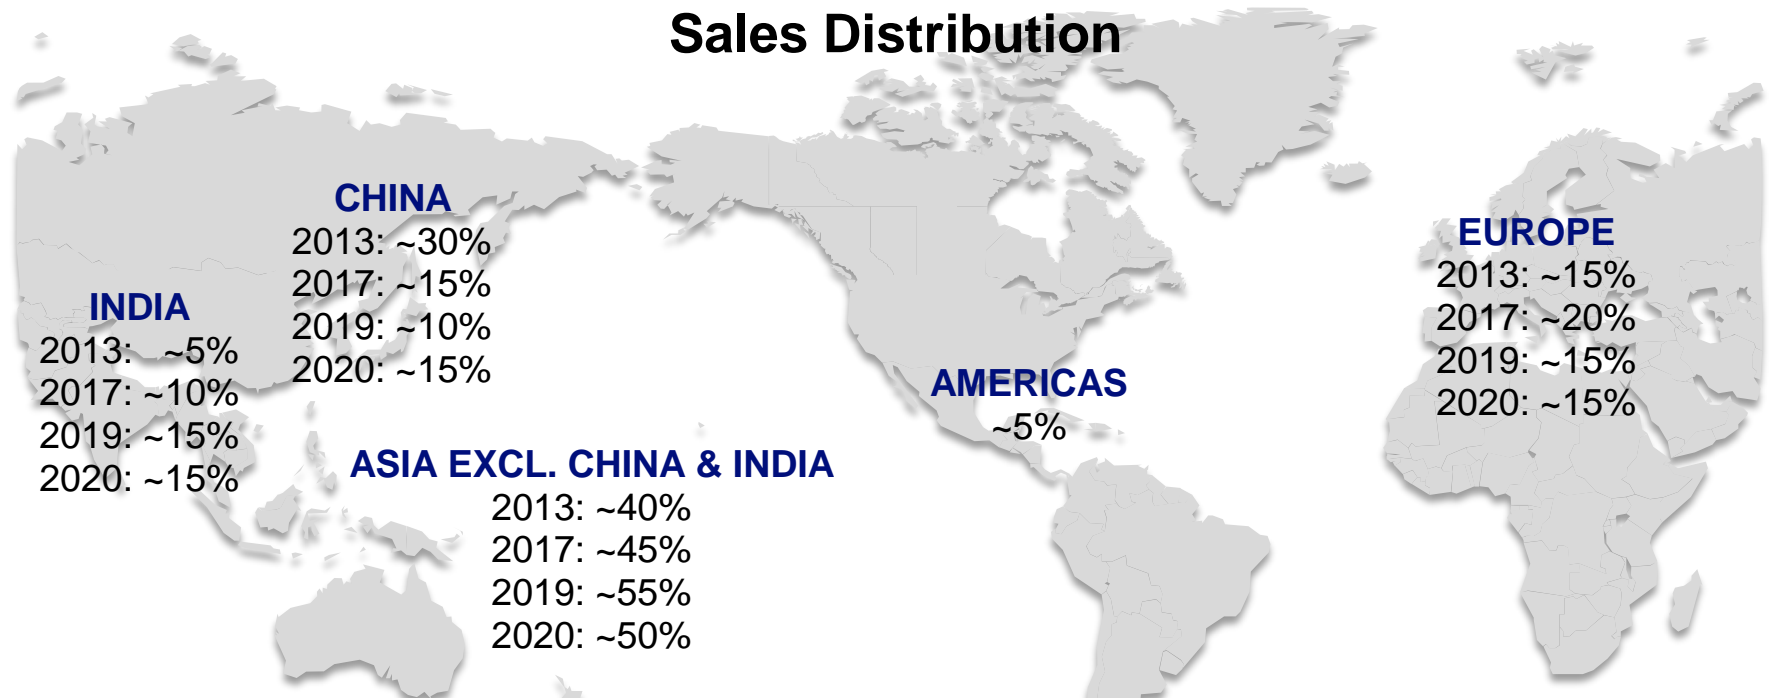

## Mozambique Exports<sup>2</sup> (Mt)

# 2<sup>nd</sup> Largest Seaborne Steelmaking Coal Supplier

Competitively positioned to supply steel producers worldwide

## Sales Distribution

Targeted increased sales to China to capture CFR China price premium

# Endnotes: Steelmaking Coal Market

# Steelmaking Coal Resilience

Teck

# Executive Summary

**Steel demand is forecast to remain strong through to 2050**

- Steel is not substitutable for most applications
- Steel is required for infrastructure development, including that required to support electrification and decarbonization

**Demand for high-quality seaborne hard coking coal used in blast furnace steelmaking is forecast to remain strong**

- Forecast long-term demand for steel is strong in high growth importing regions such as India and South-East Asia where blast furnace steelmaking will dominate
- Teck's high-quality seaborne steelmaking coal will continue to be a key resource for the low-carbon transition

**Global steel industry emits 7-10% of total GHG emissions**

- Meeting the objective of the Paris Accord will rely on a range of steelmaking abatement technologies
- Together they can reduce steelmaking emissions by more than 80% by 2050

**Blast furnace CCUS is the only technology capable of decarbonizing steelmaking at the rate and scale required by 2050**

- >70% of the world's steelmaking uses blast furnaces
- Leverages sunk cost of more than US\$1 trillion of young blast furnaces, which will last well into the second half of this century
- Blast furnace CCUS is the only technology commercially ready for near-term adoption

# Steel is Essential for Economic Growth In a Low-Carbon World

**World's largest metal market today**

Steel is **widely used** and **hard to substitute**

Growth continues to be driven by **decarbonization** and ongoing economic development

**Global Production in 2019 (Mt)**

**Enables low-carbon energy system**

Fundamental to **renewable energy transition** and **1.5°C target** of Paris Accord

Steelmaking coal required while **alternatives evolve** and **carbon abatement policy advances**

**~25%**

**Lower** CO<sub>2</sub> footprint in steel relative to cement<sup>1</sup>

**Suited for a circular economy**

**Easily recyclable** (e.g., without alloy issue of aluminum)

**80%+ recycle rate** of steel scrap in developed economies<sup>2</sup>

**>90%**

**Lower** CO<sub>2</sub> footprint of recycled steel compared to new steel<sup>1</sup>

**Essential to lifting global living standards**

Middle class expected to grow by **2-3 billion people** by 2050, **mostly in India and South-East Asia (SEA)**

Rural communities are **moving to cities**, driving infrastructure build

**~165%**

**Increase** in combined annual demand growth for India and SEA<sup>3</sup> between 2019 and 2050

# Steel Demand Is Robust Through 2050

## In all IEA Scenarios

Finished steel demand, billion tonnes

### Standard Growth scenario – IEA SDS<sup>1</sup>

- Industrialized growth in India and South East Asia
- China plateaus until 2030 before converging to Japan/Germany levels
- Growth in North America from green infrastructure development

### Robust Growth scenario – IEA STEPS<sup>2</sup>

- China grows for several more years and then joins developed Asian rate

### Muted Growth scenario

- China decline to Western European levels by 2050

# Steelmaking Technologies are Driven by Regional Factors

## **Blast Furnace + CCUS**

Proven technology with favorable economics in regions with young blast furnaces (Asia) and abundant sequestration capacity, deriving the best combination of speed and scale for decarbonization

## **Scrap**

Currently accounts for ~30% of global crude steel production, and while expected to grow, availability will be limited in new growth regions

## **H<sub>2</sub>-Direct Reduced Iron (H<sub>2</sub>-DRI) via EAF**

Expected to increase with technology development, and favourable in regions with steady scrap supply, access to abundant cheap renewable power and high-grade iron ore pellets, and near end-of-life blast furnaces (e.g., Europe)

## **Natural Gas Direct Reduced Iron (DRI) + CCUS via Electric Arc Furnace (EAF)**

Effective where there is low-cost & abundant natural gas (Americas, MENA and parts of Asia) and steady scrap supply

# Blast Furnace + CCUS Will Lead Large-Scale Decarbonization Adoption

## Blast Furnace + CCUS is adoption ready

### Proven technology in hard-to-abate industries

- CCUS operates in power generation, refining, petrochemicals, agrichemicals, and steel/iron industry

### Blast Furnace + CCUS is commercially feasible

- Leverages >US\$1 trillion of young installed blast furnace fleet
- Ample global CCUS storage capacity of ~5 trillion tonnes CO<sub>2</sub>

### Fastest path to large-scale decarbonization

- >75% of global steel is produced through the blast furnace route
- Requires moderate CO<sub>2</sub> pricing (> US\$50/t - \$150/t CO<sub>2</sub>) to be economic
- Cost reductions achieved with generational learning

### Accelerators to adoption

- Large-scale hub and cluster transportation and storage infrastructure will support economies of scale

## Blast Furnace + CCUS adoption will lead through 2050<sup>2</sup>

# Blast Furnace + CCUS is the Only Technology That Can be Adopted with Speed and Scale

Total Cost of Ownership<sup>1</sup> (US\$/t liquid steel)  
China (SDS – 1.7° scenario)

To make hydrogen steelmaking cost competitive, ample access to low-cost hydrogen (US\$1-2/kg) is required. This implies:

## Stable supply of renewable power <US\$1.5c/KWh

- Significant investment in large-scale renewable infrastructure development that does not exist today
- ~60% lower wind and solar costs

## Low-cost, highly-efficient electrolyzers

- Decline in electrolyzer capex by ~80%
- High-capacity scale-up and utilization rates
- Sufficient H<sub>2</sub> storage capacity to allow stable and continuous supply

## High-grade iron ore pellet availability

- Availability constraints on high-grade iron-ore pellets suitable for DRI will limit H<sub>2</sub>-DRI adoption beyond 2030

Large-scale green hydrogen adoption is unlikely before 2040

# Despite Robust Steel Demand, Long-Term Demand for Steelmaking Coal Is Expected to Decline...

## Steelmaking Coal Demand<sup>1</sup> (Mtpa)

Global demand for non-seaborne hard coking coal is expected to decline by 2050 due to 3 factors:

1. **Increased steel scrap availability and recycling** in mature regions
2. **Declining coke rates** due to blast furnace efficiency gains, expected to erode some coking coal demand
3. **Ramp up of direct reduced iron (DRI) steelmaking using natural gas and hydrogen**, expected to displace some coking coal demand mainly after 2040

The magnitude of steelmaking coal demand will ultimately be driven by the pace of decarbonization

# ...But Long-Term Demand for Seaborne Hard Coking Coal Will Remain Robust

## Seaborne Steelmaking Coal Demand<sup>1</sup> (Mtpa)

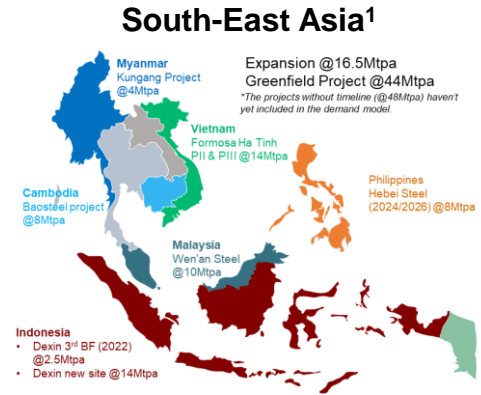

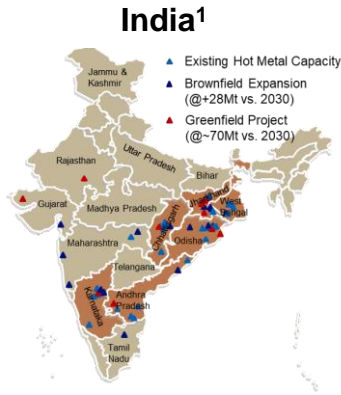

- **Seaborne HCC demand is** expected to remain resilient due to steel demand growth in regions that rely on lower-cost seaborne hard coking coal (HCC) imports (e.g., India and South-East Asia) for blast furnace steelmaking
- **Premium hard coking coal such as Teck's product** is expected to be favored as it improves blast furnace efficiency and lowers emissions

Seaborne hard coking coal demand will benefit from strong growth in major importing regions where blast furnace steelmaking will dominate

# Blast Furnace Capacity Development is Well Underway in India and South-East Asia

- Asia committing to 20+ years of traditional steel making
- European steel mills seek alternatives to coal feed
- Hydrogen pilot plants only, commercial technology still decades away and currently prohibitively expensive
- Seek alternative carbon abatement in CCUS

**Blast Furnace Capacity<sup>2</sup> (Mt)**

Financial commitments being made for multi-decade traditional steel making

# Teck's Hard Coking Coal Is Optimally Positioned For a Decarbonizing Future

Teck's HCC has amongst lowest Scope 1 and Scope 2 emissions relative to peers

- Teck's emissions intensity is within the **lowest of the commodity range, assisted by access to low carbon sources of electricity in B.C.**
- Teck mines will be **even more cost competitive** with rising CO<sub>2</sub> prices globally

CO<sub>2</sub> Coal Intensity Curve<sup>1</sup>  
(t CO<sub>2</sub>e/t saleable coal)

Highest quality HCC leading to lowest CO<sub>2</sub> emissions in steelmaking

- Teck premium HCC is **amongst the highest quality in the world, benchmarking favorably to premium Australian coking coal** on strength and volatility<sup>2</sup>
- Teck HCC **improves blast furnace efficiency** and **decreases CO<sub>2</sub> emissions per tonne of steel**

Globally advantaged seaborne logistics and cost position

- Proximity to the Pacific Ocean gives **direct access to Asia**
- By 2050, **forecast cost position in the 1<sup>st</sup>-2<sup>nd</sup> quartile** due to scarce new projects and high-cost for domestic suppliers switching to export

Simplified 2030 Seaborne HCC Supply Curve<sup>3</sup>

# Energy Business Unit

Teck

# Fort Hills Oil Sands Mine

State of the art oil sands mining facility

**Capacity**  
**200+kbpd**  
(Dec 2018)

**Low GHG**  
**Intensity<sup>2</sup>**

**High Ore Quality<sup>1</sup>**  
(11.4% bitumen grade)

**Long Life**  
**Resource<sup>1</sup>**  
(550Mbbbls Teck share)

# Fort Hills Operations Update

Fort Hills ramp-up has been completed successfully

- Fort Hills production ramp-up completed in H2 of Dec 2021
- Fort Hills operating at a stable two train production rates
- Current operational performance evident of improvements in mine productivity

Focus on transforming Fort Hills into a best-in-class<sup>1</sup> mineable oil sands asset

# Significant EBITDA Upside Potential in Energy

Providing the basis for strong and steady cash flow for decades

## Assumptions

	WTI @ US\$75/BBL	WTI @ US\$60/BBL
WTI-WCS differential	US\$10.75	US\$10.75
C\$/US\$ exchange rate	1.25	1.25
Adjusted operating costs <sup>2</sup>	C\$23/bbl	C\$23/bbl

- Debottlenecking could add incremental capacity of 20,000 – 40,000 barrels per day
- Regional synergies may provide further opportunities for cost efficiencies and production optimization

## EBITDA<sup>1</sup> Potential – Teck’s Share (C\$ million)

Potential annual EBITDA of \$300 million to \$700 million with debottlenecking

# Best In Class Low Carbon Intensity Production

Our Fort Hills blend can displace carbon intensive crudes

- Emissions intensity of Canadian oil sands has declined by 25%; estimated reduction of 15% to 20% by 2030
- PFT bitumen emissions from mining significantly lower than others
- Fort Hills PFT currently the new bar for low emissions
- Fort Hills will displace barrels of crude from higher emitters

## Total Life Cycle Emissions Intensity (kg CO<sub>2</sub>e/bbl refined product – gasoline/diesel)

Source: Bloomberg, BMO Capital Markets

Lower carbon intensity than 50% of the US refined barrels of oil

# Endnotes: Energy Business Unit

## **Slide 147: Fort Hills Operations Update**

1. Best-in-class (BIC) defined as >95% mine and plant availability and a competitive cost structure of <\$C23 per barrel.

## **Slide 148: Significant EBITDA Upside Potential in Energy**

1. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.
2. Adjusted operating costs is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

## **Slide 149: Best in Class Low Carbon Intensity Production**

1. Bitumen production assumes the mid-point of our 2021 production guidance range.

# Energy Market

# Crude Oil Prices Supported by Strong Demand

Demand greater than supply in 2021, nominal inventory builds in 2022

## Demand recovers to pre-COVID levels

- 2022 annual forecast ~100 Mbpd, increasing 3.5 Mbpd vs. 2021
- Impact of Covid Omicron variant lower than expected
- Fuel switching re: high nat. gas price adds 0.5 Mbpd to 1.0 Mbpd

## Supply constraint continues

- OPEC+: Managed/ratable return to market
  - supply additions less than announced 400 Kbpd/month
- Low uptake on Strategic Petroleum Reserve released barrels
- Return of Iranian barrels possible in H2/2022, upside risk

## Canadian heavy differentials narrowing

- Enbridge Line 3 replacement: In-service October 2021
- Production upsets on colder weather
- Capline reversal adds 200 kbpd P/L access to Eastern USGC

Global Crude/Liquids Demand/Supply (Mbpd)

Benchmark Pricing (US\$/bbl)

Prices as at Jan. 12

# Non-GAAP Financial Measures

Our financial results are prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board. This document refers to a number of Non-GAAP Financial Measures which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS or Generally Accepted Accounting Principles (GAAP) in the United States.

The Non-GAAP Measures described below do not have standardized meanings under IFRS, may differ from those used by other issuers, and may not be comparable to such measures as reported by others. These measures have been derived from our financial statements and applied on a consistent basis as appropriate. We disclose these measures because we believe they assist readers in understanding the results of our operations and financial position and are meant to provide further information about our financial results to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS.

**Adjusted profit attributable to shareholders** – For adjusted profit, we adjust profit attributable to shareholders as reported to remove the after-tax effect of certain types of transactions that reflect measurement changes on our balance sheet or are not indicative of our normal operating activities. We believe adjusted profit helps us and readers better understand the results of our core operating activities and the ongoing cash generating potential of our business.

**Adjusted basic earnings per share** – Adjusted basic earnings per share is adjusted profit divided by average number of shares outstanding in the period.

**Adjusted diluted earnings per share** – Adjusted diluted earnings per share is adjusted profit divided by average number of fully diluted shares in a period.

**EBITDA** – EBITDA is profit before net finance expense, provision for income taxes, and depreciation and amortization.

**Adjusted EBITDA** – Adjusted EBITDA is EBITDA before the pre-tax effect of the adjustments that we make to adjusted profit attributable to shareholders as described above.

**Impairment adjusted EBITDA** - Impairment adjusted EBITDA margin is EBITDA margin after impairments net of impairment reversal.

**EBITDA margin** – EBITDA margin is EBITDA as a percentage of revenue.

**Impairment adjusted EBITDA margin** - Impairment adjusted EBITDA margin is EBITDA margin after impairments net of impairment reversal.

The adjustments described above to profit attributable to shareholders and EBITDA highlight items and allow us and readers to analyze the rest of our results more clearly. We believe that disclosing these measures assists readers in understanding the ongoing cash generating potential of our business in order to provide liquidity to fund working capital needs, service outstanding debt, fund future capital expenditures and investment opportunities, and pay dividends.

**Gross profit before depreciation and amortization** – Gross profit before depreciation and amortization is gross profit with the depreciation and amortization expense added back. We believe this measure assists us and readers to assess our ability to generate cash flow from our business units or operations.

**Gross profit margins before depreciation** – Gross profit margins before depreciation are gross profit before depreciation and amortization, divided by revenue for each respective business unit. We believe this measure assists us and readers to compare margins on a percentage basis among our business units.

**Unit costs** – Unit costs for our steelmaking coal operations are total cost of goods sold, divided by tonnes sold in the period, excluding depreciation and amortization charges. We include this information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in the industry.

**Adjusted site cash cost of sales** – Adjusted site cash cost of sales for our steelmaking coal operations is defined as the cost of the product as it leaves the mine excluding depreciation and amortization charges, out-bound transportation costs and any one-time collective agreement charges and inventory write-down provisions.

**Total cash unit costs** – Total cash unit costs for our copper and zinc operations includes adjusted cash costs of sales, as described above, plus the smelter and refining charges added back in determining adjusted revenue. This presentation allows a comparison of total cash unit costs, including smelter charges, to the underlying price of copper or zinc in order to assess the margin for the mine on a per unit basis.

**Net cash unit costs** – Net cash unit costs of principal product, after deducting co-product and by-product margins, are also a common industry measure. By deducting the co- and by-product margin per unit of the principal product, the margin for the mine on a per unit basis may be presented in a single metric for comparison to other operations. Readers should be aware that this metric, by excluding certain items and reclassifying cost and revenue items, distorts our actual production costs as determined under IFRS.

# Non-GAAP Financial Measures

**Adjusted cash cost of sales** – Adjusted cash cost of sales for our copper and zinc operations is defined as the cost of the product delivered to the port of shipment, excluding depreciation and amortization charges, any one-time collective agreement charges or inventory write-down provisions and by-product cost of sales. It is common practice in the industry to exclude depreciation and amortization as these costs are non-cash and discounted cash flow valuation models used in the industry substitute expectations of future capital spending for these amounts.

**Adjusted operating costs** – Adjusted operating costs for our energy business unit is defined as the costs of product as it leaves the mine, excluding depreciation and amortization charges, cost of diluent for blending to transport our bitumen by pipeline, cost of non-proprietary product purchased and transportation costs of our product and non-proprietary product and any one-time collective agreement charges or inventory write-down provisions.

**Cash margins for by-products** – Cash margins for by-products is revenue from by- and co-products, less any associated cost of sales of the by and co-product. In addition, for our copper operations, by-product cost of sales also includes cost recoveries associated with our streaming transactions.

**Adjusted revenue** – Adjusted revenue for our copper and zinc operations excludes the revenue from co-products and by-products, but adds back the processing and refining charges to arrive at the value of the underlying payable pounds of copper and zinc. Readers may compare this on a per unit basis with the price of copper and zinc on the LME.

Adjusted revenue for our energy business unit excludes the cost of diluent for blending and non-proprietary product revenues, but adds back crown royalties to arrive at the value of the underlying bitumen.

**Blended bitumen revenue** – Blended bitumen revenue is revenue as reported for our energy business unit, but excludes non-proprietary product revenue, and adds back crown royalties that are deducted from revenue.

**Blended bitumen price realized** – Blended bitumen price realized is blended bitumen revenue divided by blended bitumen barrels sold in the period.

**Operating netback** – Operating netbacks per barrel in our energy business unit are calculated as blended bitumen sales revenue net of diluent expenses (also referred to as bitumen price realized), less crown royalties, transportation and operating expenses divided by barrels of bitumen sold. We include this information as investors and investment analysts use it to measure our profitability on a per barrel basis and compare it to similar information provided by other companies in the oil sands industry.

The debt-related measures outlined below are disclosed as we believe they provide readers with information that allows them to assess our credit capacity and the ability to meet our short and long-term financial obligations.

**Net debt** – Net debt is total debt, less cash and cash equivalents.

**Debt to debt-plus-equity ratio** – debt to debt-plus-equity ratio takes total debt as reported and divides that by the sum of total debt plus total equity, expressed as a percentage.

**Net debt to net debt-plus-equity ratio** – net debt to net debt-plus-equity ratio is net debt divided by the sum of net debt plus total equity, expressed as a percentage.

**Debt to Adjusted EBITDA ratio** – debt to adjusted EBITDA ratio takes total debt as reported and divides that by adjusted EBITDA for the twelve months ended at the reporting period, expressed as the number of times adjusted EBITDA needs to be earned to repay all of the outstanding debt.

**Net debt to Adjusted EBITDA ratio** – net debt to adjusted EBITDA ratio is the same calculation as the debt to adjusted EBITDA ratio, but using net debt as the numerator.

**Net debt to capitalization ratio** – net debt to capitalization ratio is net debt divided by the sum of total debt plus equity attributable to shareholders. The ratio is a financial covenant under our revolving credit facility.

<b>Adjusted operating costs (E/B)</b>	<b>(49.56)</b>	<b>(41.18)</b>	<b>(46.66)</b>	<b>(32.28)</b>
<b>Operating netback – CAD\$ per barrel</b>	<b>\$ (1.86)</b>	<b>\$ (22.08)</b>	<b>\$ (5.14)</b>	<b>\$ (23.60)</b>

1. Calculated per unit amounts may differ due to rounding.
2. Bitumen price realized represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis. Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from Fort Hills blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar.
