# Environmental Policy for our Coal Operations

At Teck, the pursuit of sustainability guides our approach to business. We are committed to environmental management best practices and every goal we set in the future builds on our stewardship of the earth yesterday and today. We are determined to achieve continual improvement in our environmental performance through our management systems. Through this policy we commit to:

- Complying with applicable legal, regulatory and other requirements which relate to our operations' identified environmental aspects;
- Ensuring effective implementation, maintenance and documentation of each environmental management system (EMS);
- Setting environmental objectives and targets which measure progress towards continual improvement, utilizing accepted assessment processes;
- Prevention of pollution;
- Minimizing environmental impacts of activities and services related to mining operations;
- Making this policy available to our employees, persons working on our behalf and the public; and,
- Raising the environmental awareness of our employees and those working on our behalf.

**Robin Sheremeta**  
Senior Vice President, Coal  
Teck Resources Limited

**Craig Bishop**  
Acting General Manager,  
Coal Mountain Operations
