Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1), for the reporting period from January 1 to December 31, 2019.

INFORMATION TO BE INCLUDED IN THE REPORT

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Teck Resources Limited (together with its wholly-owned subsidiaries, “**Teck**”) has determined that a conflict mineral, tin, was necessary to the functionality or production of a number of products manufactured by one or more of its wholly-owned subsidiaries in 2019.

The tin included in all of the relevant products, except two, was sourced through a single supplier from a single secondary tin smelter. That secondary tin smelter appears on the conformant tin smelters list produced and maintained by the Responsible Minerals Initiative as conformant with the Responsible Minerals Assurance Process assessment protocols, which uses an independent third party audit process to verify a smelter's systems to support responsible mineral procurement.

For one product, tin removal salt, tin is sourced from recycled materials processed at our Trail operation, zinc and lead concentrates purchased from miners and concentrate traders by our Trail operation, antimony and lead bullion and indium hydroxide acquired from two secondary smelters, material collected from storm runoff from wharves located in Vancouver and recycled product dust from a plant located in the US. We view tin as an impurity in the material we purchase; production of tin removal salt is a necessary process to remove these tin impurities. The agreements with the various suppliers generally include clauses that provide confirmation that no part of the material supplied was sourced from the Democratic Republic of the Congo or an adjoining country, or, purchases from miners or traders, the agreement refer to the location of the source of concentrates or other materials or the source is otherwise known. We also reviewed the purchases of concentrate made from miners and traders in 2019 and determined that none of our purchase agreements in 2019 specified that the source of the concentrate was a mine located in the Democratic Republic of the Congo or an adjoining country, and we have no reason to believe that the materials may have originated therein. Tin included in our lead metal product is sourced through tin bullion, and as part of our sourcing process we request conflict minerals compliance statements, and for the relevant bullion in 2019 none of the smelters were located in the Democratic Republic of the Congo or an adjoining country, and all appeared on the Responsible Minerals Initiative list as conformant.

Based on our agreements and purchasing arrangements with suppliers and miners and our understanding of the locations that the concentrate traders and miners source concentrate from, purchases from recycling services, as well as our review of the conformant smelter list and knowledge of the location of the relevant wharf and source of material shipped therefrom, Teck has determined that the tin necessary for the functionality of its products, other than tin removal salt and lead metal, in 2019 came from recycled or scrap sources and with respect to tin removal salt and lead metal Teck has determined that the necessary tin did not originate in, or that it has no reason to believe that such necessary tin may have originated in, the Democratic Republic of the Congo or an adjoining country.
