INFORMATION TO BE INCLUDED IN THE REPORT

Section 1 – Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report

Teck Resources Limited (together with its wholly owned subsidiaries, “Teck”) has determined that a conflict mineral, tin, was necessary to the functionality or production of six products manufactured by one or more of its wholly owned subsidiaries in 2025.

The tin included in four of its products was sourced through a single supplier from a single secondary tin smelter. That secondary tin smelter’s policy is not to source from conflict-affected and high-risk areas, and the smelter appears on the conformant tin smelters list produced and maintained by the Responsible Minerals Initiative as conformant with the Responsible Minerals Assurance Process assessment protocols, which use an independent third-party audit process to verify a smelter’s systems to support responsible mineral procurement.

For one product, tin removal salt, tin is sourced from recycled materials processed at our Trail operation, zinc and lead concentrates purchased from miners and concentrate traders by our Trail operation, material acquired from smelters located in the US, material collected from storm runoff from a wharf located in Vancouver, as well as germanium purchased from a trading firm. We view tin as an impurity in the material we purchase; production of tin removal salt is a necessary process used to recover tin and other metals for further processing. The agreements with the various suppliers generally include clauses that provide confirmation that no part of the material supplied was sourced from the Democratic Republic of the Congo or an adjoining country. For purchases suppliers whose contracts do not include such a clause, the relevant agreements either refer to the location of the source of concentrates or other materials or the source is otherwise known or is from recycled materials. We also reviewed the purchases of concentrate made from miners and traders in 2025 and determined that none of the relevant purchase agreements specified that the source of the concentrate was a mine located in the Democratic Republic of the Congo or an adjoining country, and we have no reason to believe that the materials may have originated therein. We also sell battery posts that are sourced from recycling depleted lead acid batteries that supply lead sulphate and lead metallics for recycling at our Trail facility at the end of their life.

Based on our agreements and purchasing arrangements with suppliers and miners and our understanding of the locations that the concentrate traders and miners source concentrate from, purchases from recycling services, as well as our review of the conformant smelter list and knowledge of the location of the relevant wharf and source of material shipped therefrom, Teck has determined that the tin necessary for the functionality of its products, other than tin removal salt, in 2025 came from recycled or scrap sources and with respect to tin removal salt Teck has determined that the necessary tin either are from recycled sources or did not originate in, or that it has no reason to believe that such necessary tin may have originated in, the Democratic Republic of the Congo or an adjoining country.

This information is publicly available in the Financial Reports — Regulatory Filings section of Teck’s website at www.teck.com¹.

Item 1.02 Exhibit

Not applicable.

Section 2 – Resource Extraction Issuer Disclosure

Not applicable.

Section 3 – Exhibits

Item 3.01 Exhibits

None.
