Both these slides and the accompanying oral presentations contain certain forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 and forward-looking information within the meaning of the Securities Act (Ontario) and comparable legislation in other provinces (collectively referred to herein as forward-looking statements). Forward-looking statements can be identified by the use of words such as “plans”, “expects” or “does not expect”, “is anticipated”, “budgeted”, “scheduled”, “intends”, “estimates”, “projects”, “foresees”, “proposed to be”, “will be”, “subject to”, “will”, “will occur”, “may”, “will”, “to”, “could”, “would”, “would”, “will” or “will”, or any variation of them or the use of the terms “believes”, “plans”, “seeks” or “takes into account” or variations of any of the above. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Teck to be materially different from any future results, performance or achievements anticipated by the forward-looking statements or implied by the forward-looking information. These forward-looking statements include statements relating to management’s expectations with respect to: future value catalysts, including Teck’s intention or ability to return cash to shareholders; Teck’s capital priorities and objectives of its capital allocation framework, including with respect to its dividend policy, share buybacks and how much of shares it may buyback, and maintenance of its investment grade metrics, maintenance of discipline and investing in value-enhancing projects; production, supply, demand and outlook regarding coal, copper, zinc and energy; for Teck and global markets generally; expected annualized EBITDA and other benefits that will be generated from our RACE21™ innovation-driven efficiency program and the associated implementation costs; projected and targeted operating and capital costs; expected EBITDA margins at our operations; future value from QB2/QB3; Teck’s share of remaining equity capital and timing of contributions relating to our QB2 project; all projections and expectations regarding QB2 and QB3, including, but not limited to, those set out in the “QB2 Value Creation” and “Quebrada Blanca” Appendix; including, but not limited to, statements that QB2 will be well positioned for low cost copper opportunity, statements and expectations regarding the value and amount of contingent consideration, timing of first production, long-life and expected schedules, projected IRR, QB2 throughput, mine life, projected copper production inclusive of QB3, copper production costs, strip-ratios, corresponding copper costs, infrastructure, construction schedule and ownership of pipelines and port facilities, expansion and extension schedule, and potential for significant free cash flow between 2018 and 2020; all other economic and financial projections regarding the QB2 project and Teck’s contributions thereto including expected EBITDA from the project; long-term strategy, anticipated capital allocation; our sustainability strategy and the targets, goals and expectations relating thereto; the long life of our projects and operations, their positioning on the cost curve and the low risk of the jurisdictions in which they are located; mine life estimates; commodity price leverage; our reserve and resource estimates; potential growth options; all guidance including but not limited to production guidance, sales and unit cost guidance and capital expenditures guidance; future commodity prices; the benefits of our innovation strategy and initiatives described under the “Innovation” Appendix and elsewhere, including regarding smart shovels, autonomous haul trucks and artificial intelligence, and the savings potential associated therewith; the coal market generally; growth potential for our steelmaking coal production, including our expectation that our coal reserves support approximately 27-28 million tonnes of production capacity and our ability to maintain and expand our coal production; copper strategy; copper growth potential and expectations regarding the potential production profile of our various copper projects; our Highland Valley Copper 2040 Project; our Project Satellites projects including future spending and potential mine life; the zinc market generally; anticipated zinc production, capital investments and costs; our potential zinc projects; the energy market generally; the potential for significant EBITDA upside in our Energy unit and steady cash flow; anticipated Fort Hills production and cost estimates and debottlenecking opportunities; potential benefits and capacity increase from debottlenecking opportunities at Fort Hills and costs associated with debottlenecking; production estimates and timing for regulatory approvals at Frontier and Lease 421; potential for longer term expansion opportunities at Fort Hills and associated costs; and the low carbon intensity of Fort Hills. The forward-looking statements, including those relating to QB2, are based on and involve numerous assumptions, risks and uncertainties and actual results may vary materially. These statements are based on assumptions, including, but not limited to, general business and economic conditions, interest rates, the supply and demand for, deliveries of, and the level and volatility of prices of, zinc, copper, coal, blended bitumen, and other primary metals, minerals and products as well as steel, oil, natural gas, petroleum, and related products, the timing of the receipt of regulatory and governmental approvals for our development projects and other operations and regulatory technologies, our costs of production and production and productivity levels, as well as those of our competitors, power prices, continuing availability of water and power resources for our operations, market competition, the accuracy of our reserve estimates (including with respect to size, grade and recoverability) and the geological, operational and price assumptions upon which these are based, conditions in financial markets, the future financial performance of the company, our ability to successfully implement our technology and innovation strategy, the performance of new technologies in accordance with our expectations, our ability to attract and retain skilled staff, our ability to procure equipment and operating supplies, positive results from the studies on the expansion projects, our coal and other product inventories, our ability to secure adequate transportation for our products, our ability to obtain permits for our operations and expansions, our ongoing relations with our employees and business partners and joint venture, our expectations with respect to the carbon intensity of our operations, assumptions regarding returns to cash holders include assumptions regarding our future business and prospects, other uses for cash or retaining cash. Reserve and resource life estimates assume the mine life of longest-lived resource in the relevant commodity is achieved, assumes production at planned rates and in some cases development of as yet undeveloped projects. Assumptions are based on upgraded and revised resource and technical and economic assumptions regarding the effectiveness of current technology, and that it will perform as expected. Statements concerning future production costs or volumes are based on numerous assumptions of management regarding operating matters and on assumptions regarding the effectiveness of current technology, and that it will perform as expected. Statements concerning future production costs or volumes are based on numerous assumptions of management regarding operating matters and on assumptions including Teck’s pro-forma copper exposure estimates, strip-ratios, costs (including C1 and AISC), reserves and resources, construction timing for regulatory approvals at Frontier and Lease 421; potential for longer term expansion opportunities at Fort Hills and associated costs; and the low carbon intensity of Fort Hills.
Caution Regarding Forward-Looking Statements

that demand for products develops as anticipated, that customers and other counterparties perform their contractual obligations, that operating and capital plans will not be disrupted by issues such as mechanical failure, unavailability of parts and supplies, labour disturbances, interruption in transportation or utilities, adverse weather conditions, and that there are no material unanticipated variations in the cost of energy or supplies. Statements regarding anticipated steelmaking coal sales volumes and average steelmaking coal prices depend on timely arrival of vessels and performance of our steelmaking coal-loading facilities, as well as the level of spot pricing sales.

All QB2 economic analysis assume the inferred resources in the Sanction Case and inferred resources are considered too geologically speculative to be economic. Forward-looking statements relating to the timing and amount of Teck’s equity contributions for QB2 assume that the project spending does not increase and contributions are required in accordance with the current project schedule. All QB2 mining and economic projections (including QB2 mine life, throughput, timing of first production, amount of production, costs (including C1 and AISC), expected EBITDA from the project) and projected capital intensity figures depend on the QB2 project coming into production in accordance with the current budget and project schedule. The final amount of the US$50 million contingent payment is tied to throughput and depends on achieving certain throughput targets by December 31, 2025 and is subject to reduction in the event that certain throughput and recovery targets are not achieved. Assumptions are also included in the footnotes to various slides. The foregoing list of assumptions is not exhaustive.

Factors that may cause actual results to vary materially include, but are not limited to: changes in commodity and power prices; changes in market demand for our products; changes in interest and currency exchange rates; acts of foreign and domestic governments; the outcome of legal proceedings; inaccurate geological and metallurgical assumptions (including with respect to the size, grade and recoverability of reserves and resources); unanticipated operational difficulties (including failure of plant, equipment or processes to operate in accordance with specifications or expectations, cost escalation, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job action, adverse weather conditions and unanticipated events related to health, safety and environmental matters); any change or deterioration in our relationships with our joint venture partners; union labour disputes; political risk; social unrest; consequences of climate change; changes in laws or regulations or enforcement thereof; development and use of new technology; failure of customers or counterparties (including but not limited to rail, port, pipeline and other logistics providers) to perform their contractual obligations; changes in our credit ratings or the financial market in general; unanticipated increases in costs to construct our development projects; difficulty in obtaining permits or securing transportation for our products; inability to address concerns regarding permits of environmental impact assessments; changes in tax benefits or tax rates; resolution of environmental and other proceedings or disputes; and changes or deterioration in general economic conditions. We will not achieve the maximum mine lives of our projects, or be able to mine all reserves at our projects or operations, if we do not obtain relevant permits for our operations. Our Fort Hills and Antamina operations are not controlled by us; as a result the actions of our partners may affect anticipated outcomes. Unanticipated technology or environmental interactions could affect the effectiveness of our Elk Valley Water Quality Plan strategy. Purchases of Class B shares under the normal course issuer bid may be impacted by, amount other things, availability of Class B shares, share price volatility, and availability of funds to purchase shares.

We assume no obligation to update forward-looking statements except as required under securities laws. Further information concerning assumptions, risks and uncertainties associated with these forward-looking statements and our business can be found in our most recent Annual Information Form, as well as subsequent filings of our management’s discussion and analysis of quarterly results and other subsequent filings, all filed under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov).

Scientific and technical information regarding our material mining projects in this presentation was approved by Mr. Rodrigo Alves Marinho, P.Geo., an employee of Teck. Mr. Marinho is a qualified person, as defined under National Instrument (NI) 43-101.

QB2 Project Disclosure

All economic analysis with respect to the QB2 project based on a development case which includes inferred resources within the life of mine plan, referred to as the Sanction Case, which is the case on which Teck is basing its development decision for the QB2 project. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling. Nonetheless, based on the nature of the mineralization, Teck has used a mine plan including inferred resources as the development mine plan for the QB2 project.

The economic analysis of the Sanction Case, which includes inferred resources, may be compared to economic analysis regarding a hypothetical mine plan which does not include the use of inferred resources as mill feed, referred to as the Reserve Case, and which is set out in Appendix slides “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” and is further discussed in our Annual Information Form filed under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov).

The scientific and technical information regarding the QB2 project was prepared under the supervision of Rodrigo Marinho, P. Geo, who is an employee of Teck. Mr. Marinho is a qualified person, as defined under National Instrument 43-101.
A Transformational Time for Teck

Milestones Achieved
- QB2 permit received, sanctioning announced, partnership closed and project financing signed
- Fort Hills ramp up
- Waneta sale closed
- Returned to investment grade credit rating

Solid Foundation
- Quality operating assets in stable jurisdictions
- Strong financial position
- Sustainability leader

Future Value Catalysts
- Positioned for cash returns to shareholders
- QB2/QB3
- Transformation through innovation: RACE21™

Capital Allocation Framework
For this purpose, we define available cash flow as cash flow from operating activities after interest and finance charges, lease payments and distributions to non-controlling interests less: (i) sustaining capital and capitalized stripping; (ii) committed enhancement and growth capital; (iii) any cash required to adjust the capital structure to maintain solid investment grade credit metrics; and (iv) our base $0.20 per share annual dividend. Proceeds from any asset sales may also be used to supplement available cash flow. Any additional cash returns will be made through share repurchases and/or supplemental dividends depending on market conditions at the relevant time.

The balance of remaining cash is available to finance further enhancement or growth opportunities. If there is no immediate need for this capital for investment purposes, it may be used for further returns to shareholders or retained as cash on the balance sheet.
Strong Track Record of Returning Cash to Shareholders
~$6.1 billion returned from January 1, 2003 to June 30, 2019

Dividends
• $4.3 billion since 2003, representing ~27% of free cash flow

Share Buybacks
• $1.8 billion since 2003, representing ~11% of free cash flow
QB2 Value Creation

Delivers on Copper Growth Strategy

- Rebalances Teck’s portfolio over time to make the contribution from copper similar to steelmaking coal
- World class, low cost copper opportunity in an excellent geopolitical jurisdiction
- First production in late 2021
- Very attractive IRR$^1$
  - At US$3.00/lb copper, unlevered IRR is 19% and levered IRR is 30%
- Vast, long life deposit with expansion potential (QB3)

Low Strip Ratio$^2$

Low Cost, Low Carbon Producer

- Among world’s **lowest GHG intensity** for steelmaking coal and copper production
- Fort Hills – one of the **lowest carbon intensities** among North American oil sands producers on a wells-to-wheels basis
- Progressive carbon pricing already built into majority of business
- Well-positioned for a low-carbon economy

**GHG Emissions Intensity Ranges Among ICMM Members** (kgCO$_2$e per tonne of product)

- Teck in bottom quartile for miners
Teck has a comprehensive systems and procedures in place based on six pillars:

1. Surveillance Technology
2. Staff Inspections
3. Annual External Inspections
4. Internal Review
5. Detailed Third-Party Reviews
6. Independent Review Boards

Full emergency preparedness plans are in place at relevant facilities.

Management and emergency response aligned with Mining Association of Canada Towards Sustainable Mining Protocols.

Dam Safety Inspection reports for Teck facilities available online

---

### Further Tailings Governance Steps

**1. Special review by external experts**
- Confirmed no immediate or emerging issues that could result in failure
- Confirmed Teck tailings management practices industry leading

**2. Supporting industry-wide improvements**
- ICMM-UN-PRI global tailings standard

**3. Enhanced transparency & disclosure**
- Facilities inventory posted
- Detailed response to Church of England’s tailings facility enquiry

Related SASB\(^1\) Metric: EM-MM-150a.1 | [Link to Data](#)
Steelmaking Coal Market

- Raw materials pricing under pressure due to declining steel margins
- Growing demand, especially in India, Southeast Asia and China
- Capital markets are rationing capital to coal, which is directed at thermal coal but impacts steelmaking coal; will constrain supply and increase the value of existing assets
- Investment remains modest, permitting is challenging
- Chinese safety checks restrict domestic production
- Teck’s steelmaking coal sales to India increased from ~5% in 2013 to ~15% in 2018
  - In the same period, our sales to China declined from ~30% to ~10%

![Graph showing coal price over time](image)

Coal Price\(^1\) (US$/t)

Steelmaking coal price averaged US$182/t, or US$200/t on an inflation-adjusted basis, from January 1, 2008\(^1\)
Supply Fundamentals Offsetting Weaker Demand In Copper and Zinc

Copper

- Cathode market balanced for next 2 years
- Global macro concerns impacting demand assumptions and prices
- Concentrate market tightness increasing as mine growth slows and new smelter capacity increases in China
- Scrap availability constrained due to environmental concerns in China
- Mine growth to resume in 2021; peak in 2023
- Longer term mega-trends supportive of demand

Zinc

- Global concentrate market in surplus, under constrained smelter production
- Smelter bottleneck constraining refined production in China
- Metal inventories well below long term averages
- Physical metal market remains comfortably supplied
- Trade tensions undermine zinc price
- High cost miners now under pressure from price and treatment charges

QB2 Project Update
Executing on a world class development asset

Highlights

✓ Vast, long life deposit in favourable jurisdiction
✓ Very low strip ratio
✓ Low all-in sustaining costs (AISC)¹
✓ Will be a top 20 producer
✓ High grade, clean concentrates
✓ Significant brownfield development
✓ Community agreements in place and strong local relationships
✓ Fully sanctioned and construction well underway
✓ Expansion potential (QB3) with potential to be a top 5 producer

1. AISC stands for All-In Sustaining Costs. It includes all costs associated with maintaining and operating a mine, excluding capital expenses, over its life.
QB2 Rebalances Teck’s Portfolio
Delivers on copper growth strategy

• Rebalances Teck’s portfolio over time to make the contribution from copper similar to steelmaking coal
• On a consolidated basis copper production is doubled
• On an attributable basis copper production increases by ~60%
• Based on expected long term prices for copper and steelmaking coal, increased copper production could reduce steelmaking coal to below 50% of EBITDA over time
• QB3 and other copper development projects could further increase copper exposure and diversification

Teck's Annual Copper Production (kt Cu)

*Based on Sanction Case (Including 199 Mt Inferred Resources)*

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.
Increasing Teck's Returns on QB2

Enhancing IRR

- Transaction with Sumitomo and US$2.5 billion project financing significantly enhances Teck's IRR

Reducing Teck's Equity Contributions

- Transaction proceeds and project financing reduce Teck's equity contributions to ~US$693 million with no contributions required post-closing until late 2020

Teck's Post Transaction After-Tax IRR\(^1\) (%)

- Unlevered: 19%, 21%, 24%
- Levered: 30%, 35%, 40%

QB2 Funding Profile Before Escalation\(^2\) (US$M)

- Transaction proceeds and project financing reduce Teck's equity contributions to ~US$693 million with no contributions required post-closing until late 2020

QB2 Project Economics Comparison

- Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

Based on Sanction Case (Including 199 Mt Inferred Resources)
QB2’s Competitive Cost Position

Competitive Operating Cost & Capital Intensity

- Given the exceptionally low strip ratio, consistent grade profile, compact site layout, and high level of automation, QB2 is expected to have attractive and relatively stable operating costs

- Exceptional strip ratio of 0.70 LOM, meaning for every one tonne of ore mined, only 0.70 tonnes of waste need to be mined (0.44 over first 5 full years)
  - Compares to other world class asset strip ratios of 3.5 for Antamina, 3.1 for Collahuasi, and 2.5 for Escondida
  - Major benefit to sustaining capital since it reduces mobile fleet size and replacement costs

- Capital intensity of ~US$15k/tpa copper equivalent is in line or lower than recent comparably sized projects with the ability to amortize these costs over a very long mine life

Low Cash Cost Position

C1 Cash Cost & AISC Curve (US$/lb, 2023E)

Based on Sanction Case (Including 199 Mt Inferred Resources)
Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.
Vast, Long Life Deposit at QB

QB2 Uses Less than 25% of R&R

- Resource exclusive of Reserve increased 40% since 2017
- Initial 28 year mine life processes <25% of the currently defined Reserve and Resource Tonnage
- Deposit is capable of supporting a very long mine life based on throughput rate of 143 ktpd by utilizing further tailings capacity at already identified sites
- Actively evaluating potential options to exploit value of full resource through mill expansion and / or mine life extension
- Beyond the extensive upside included in the defined QB deposit, the district geology is highly prospective for exploration discovery and resource addition
  - Mineralization is open in multiple directions with drilling ongoing

Extension Potential

+40%
QB3 – Long-Term Growth
Expansion potential to realize full potential of the orebody

• QB2 utilizes less than 25% of resource
• QB3 evaluating options to exploit the full value of the resource through mill expansion and / or mine life extension
• Ongoing work includes:
  − ~18 km of drilling in 2018
  − 60 km of drilling planned for 2019
  − Scoping Study underway to be followed by a Prefeasibility Study

Key Valuation Drivers
• Defining the full size of the deposit through drilling
• Proactive evaluation of long-term options for production
• Maximizing the performance of the QB2 plant
• Leveraging the QB2 infrastructure to target production increases at a lower capital intensity

Copper Mineralization from 2018 Drilling¹
• 2018 drilling returned long intervals of +0.5% Cu, with predictable sulfide zonation patterns

¹ Source: Teck Resources Ltd.
Clear Path to Production at QB2

Construction Approach

- Key project elements are segregated by area and can be managed more efficiently reducing risk:
  - Open pit mine (120 Mtpa peak);
  - Concentrator (143 ktpd);
  - Tailings storage facility (1.4 Bt capacity);
  - Concentrate and water supply pipelines (165 km); and
  - Port facility (including a desalination plant and concentrate filtration plant)
- QB will own and operate its pipelines and port facilities

Operational Readiness

- Early focus on operational readiness and commissioning to ensure a seamless transition to operations
- Organizational design incorporating Integrated Operations and Business Partner Model
  - Driving value by linking process, people and workplace design
- Engagement of experienced consultants to support detailed plan development and execution, integrated operations design and systems, and commissioning planning
# Execution Readiness at QB2

</table>
The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

ENAMI Interest in QB

- The government of Chile owns a 10% non-funding interest in Compañía Minera Teck Quebrada Blanca S.A. (CMTQB) through its state-run minerals company, Empresa Nacional de Minería (ENAMI)
- ENAMI has been a partner at QB since 1989 and is a 10% shareholder of Carmen de Andacollo
- ENAMI is not required to fund QB2 development costs
- Project equity funding in form of:
  - 25% Series A Shares
  - 75% Shareholder Loans
- Until shareholder loans are fully repaid, ENAMI is entitled to a minimum dividend, based on net income, that approximates 2.0-2.5% of free cash flow
  - Thereafter, ENAMI receives 10% of dividends / free cash flow
- ENAMI is entitled to board representation

Organizational Chart

- Teck
- SMM
- SC
- TRCL
- JVCQ
- CMTQB
- QB1 / QB2 / QB3
- ENAMI
- Chile HoldCo
Quebrada Blanca Accounting Treatment

**Balance Sheet**
- 100% of project spending included in property, plant and equipment
- Debt includes 100% of project financing
- Total shareholder funding to be split between loans and equity approximately 75%/25% over the life of the project
- Sumitomo (SMM/SC)\(^1\) contributions will be shown as advances as a non-current liability and non-controlling interest as part of equity
- Teck contributions, whether debt or equity eliminated on consolidation

**Cash Flow**
- 100% of project spending included in capital expenditures
- In 2019, Sumitomo\(^1\) contribution will recorded within financing activities and split approximately 50%/50% as:
  - Loans recorded as “Advances from Sumitomo”
  - Equity recorded as “Sumitomo Share Subscriptions”
- 100% of draws on project financing included in financing activities
- After start-up of operations
  - 100% of profit in cash flow from operations
  - Sumitomo’s\(^1\) 30% and ENAMI’s 10% share of distributions included in non-controlling interest

**Income Statement**
- Teck’s income statement will include 100% of QB’s revenues and expenses
- Sumitomo’s\(^1\) 30% and ENAMI’s 10% share of profit will show as profit attributable to non-controlling interests
Slide 19: QB2 Project Update
1. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures which do not have a standardized meanings prescribed by International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles in the United States. These measures may differ from those used by other issuers and may not be comparable to such measures as reported by others. These measures are meant to provide further information about our financial expectations to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS. For more information on our calculation of non-GAAP financial measures please see our Management’s Discussion and Analysis for the year ended December 31, 2018, which can be found under our profile on SEDAR at www.sedar.com.
2. Based on QB2 Sanction Case first five full years of copper production.

Slide 20: QB2 Rebalances Teck’s Portfolio
1. We include 100% of the production and sales from QB and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% of production and sales from Antamina, representing our proportionate equity interest in Antamina. Copper production includes cathode production at QB.
2. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
3. As at January 1, 2019. Assumes optimized funding structure.
4. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
5. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
6. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
7. The valuation of approximately ~US$3 billion for Teck's 90% interest prior to the Sumitomo transaction is based on a transaction value of US$1 billion comprising an earn-in contribution of US$800 million and assumed contingent consideration proceeds with a present value of approximately US$200 million. The undiscounted contingent consideration is estimated at US$300 million and comprises: (a) US$50 million relating to achieving the mill throughput optimization target as described in Note 1 on the "QB2 Transaction Terms" slide, assumed to be received in 2024; and (b) 8% of the net present value of the QB3 expansion at sanction, assuming an expansion sanctioned in 2024 which doubles QB2 throughput with further tailings facility construction deferred. At a real copper price of US$3.00/lb, the payment is estimated at approximately US$250 million. Using a real discount rate of 8%, the present value of the contingent consideration, based on the above assumptions is estimated at approximately US$200 million. This estimate is based on a number of significant assumptions in addition to those described above. There can be no assurance that the contingent consideration will approximate the amounts outlined above, or that it will be received at all.
8. Does not include contingent consideration.

Slide 21: QB2 is a World Class Copper Opportunity
1. As at January 1, 2019. Assumes optimized funding structure.
2. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
3. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
4. The valuation of approximately ~US$3 billion for Teck’s 90% interest prior to the Sumitomo transaction is based on a transaction value of US$1 billion comprising an earn-in contribution of US$800 million and assumed contingent consideration proceeds with a present value of approximately US$200 million. The undiscounted contingent consideration is estimated at US$300 million and comprises: (a) US$50 million relating to achieving the mill throughput optimization target as described in Note 1 on the “QB2 Transaction Terms” slide, assumed to be received in 2024; and (b) 8% of the net present value of the QB3 expansion at sanction, assuming an expansion sanctioned in 2024 which doubles QB2 throughput with further tailings facility construction deferred. At a real copper price of US$3.00/lb, the payment is estimated at approximately US$250 million. Using a real discount rate of 8%, the present value of the contingent consideration, based on the above assumptions is estimated at approximately US$200 million. This estimate is based on a number of significant assumptions in addition to those described above. There can be no assurance that the contingent consideration will approximate the amounts outlined above, or that it will be received at all.

Slide 22: Increasing Teck’s Returns on QB2
2. On a 100% go forward basis from January 1, 2019 in constant Q2 2017 dollars and a CLP:USD exchange rate of 625, not including escalation (estimated at US$300 - $470 million based on 2 - 3% per annum inflation), working capital or interest during construction. Includes approximately US$500 million in contingency. At a spot CLP/USD rate of approximately 675 capital would be reduced by approximately US$270 million.
3. On a go forward basis from January 1, 2019.
4. Assumes US$1.2 billion of Sumitomo contributions associated with purchase price spent before first draw of project finance facility. Thereafter, project finance facility used to fund all capital costs until target debt : capital ratio achieved on a cumulative basis, after which point project finance and equity contributions are made ratably based on this same debt : capital ratio.
Notes - Appendix: Quebrada Blanca

Slide 23: QB2’s Competitive Cost Position
2. Based on first five full years of copper equivalent production. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
3. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
4. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.

Slide 24: Vast, Long Life Deposit at QB
1. Resources figures as at November 30, 2018. Resources are reported separately from, and do not include that portion of resources classified as reserves. See “QB2 Reserves and Resources Comparison” slide for further details.

Slide 25: QB3 – Long-Term Growth
1. DDH-756 @176.6m, Field of view 2cm.

Slide 28: QB2 Project Economics Comparison
1. All metrics on 100% basis and assume US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver unless otherwise stated. NPV, IRR and payback on after-tax basis.
2. Life of Mine annual average figures exclude the first and last partial years of operations.
3. Copper equivalent production calculated assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
4. C1 cash costs are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
5. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
6. Payback from first production.
7. Based on go-forward cash flow from January 1, 2017. Based on all equity funding structure.
8. Based on go-forward cash flow from January 1, 2019. Based on optimized funding structure.
10. Includes impact of US$2.5 billion project financing. Does not consider contingent consideration.
11. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 29: QB2 Reserves and Resources Comparison
1. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US$13.39/t over the planned life of mine. The life-of-mine strip ratio is 0.41.
2. Both mineral resource and mineral reserve estimates assume long-term commodity prices of US$3.00/lb Cu, US$9.40/lb Mo and US$18.00/oz Ag and other assumptions that include: pit slope angles of 30–44º, variable metallurgical recoveries that average approximately 91% for Cu and 74% for Mo and operational costs supported by the Feasibility Study as revised and updated.
3. Mineral resources are reported using a NSR cut-off of US$11.00/t and include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.
4. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US$18.95/t over the planned life of mine. The life-of-mine strip ratio is 0.70.
5. Mineral resources are reported using a NSR cut-off of US$11.00/t outside of the reserves pit. Mineral resources include inferred resources within the reserves pit at a US$18.95/t NSR cut-off and also include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.

Slide 31: Quebrada Blanca Accounting Treatment
1. Sumitomo Metal Mining Co. Ltd. and Sumitomo Corporation are collectively referred to as Sumitomo.
Strategy and Overview
Consistent Long-Term Strategy

Notes: Appendix – Strategy and Overview

Slide 37: Global Customer Base
1. Gross profit before depreciation and amortization is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 39: Production Guidance
2. Metal contained in concentrate.
3. We include 100% of production and sales from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% and 21.3% of production and sales from Antamina and Fort Hills, respectively, representing our proportionate ownership interest in these operations.
4. Copper production includes cathode production at Quebrada Blanca and Carmen de Andacollo.
5. Total zinc includes co-product zinc production from our copper business unit.
7. Results for 2018 are effective from June 1, 2018.
8. The 2020–2022 bitumen production guidance does not include potential near-term debottlenecking opportunities. See energy business unit in Q4 2018 press release for more information.

Slide 40: Sales and Unit Cost Guidance
2. Steelmaking coal unit costs are reported in Canadian dollars per tonne. Adjusted site cost of sales includes site costs, transport costs, and other and does not include deferred stripping or capital expenditures. Adjusted site cost of sales is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
3. Copper unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Total cash unit costs are before co- and by-product margins. Copper net cash costs are after by-product margins and include adjusted cash cost of sales, smelter processing charges and cash margin for by-products including co-products. Assumes a zinc price of US$1.15 per pound, a molybdenum price of US$12 per pound, a silver price of US$16.00 per ounce, a gold price of US$1,350 per ounce and a Canadian/U.S. dollar exchange rate of $1.32. See “Non-GAAP Financial Measures” slides.
4. Zinc unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Total cash unit costs are before co- and by-product margins. Zinc net cash costs are after by-product margins and are mine costs including adjusted cash cost of sales, smelter processing charges and cash margin for by-products. Assumes a lead price of US$0.90 per pound, a silver price of US$16.00 per ounce and a Canadian/U.S. dollar exchange rate of $1.32. By-products include both by-products and co-products. See “Non-GAAP Financial Measures” slides.
5. Bitumen unit costs are reported in Canadian dollars per barrel. Adjusted operating costs represent costs for the Fort Hills mining and processing operations and do not include the cost of diluent, transportation, storage and blending. See “Non-GAAP Financial Measures” slides.

Slide 41: Capital Expenditures Guidance
2. For steelmaking coal, sustaining capital includes Teck’s share of water treatment charges of $57 million in 2018. Sustaining capital guidance includes Teck’s share of water treatment charges related to the Elk Valley Water Quality Plan, which are approximately $235 million in 2019. Steelmaking coal major enhancement capital guidance includes $210 million relating to the facility upgrade at Neptune Bulk Terminals that will be funded by Teck.
3. For copper, new mine development guidance for 2019 includes QB3 scoping, Zafranal, San Nicolás and Galore Creek.
Notes: Appendix – Strategy and Overview

Slide 42: Commodity Price Leverage
2. All production estimates are subject to change based on market and operating conditions.
3. The effect on our profit attributable to shareholders and on EBITDA of commodity price and exchange rate movements will vary from quarter to quarter depending on sales volumes. Our estimate of the sensitivity of profit and EBITDA to changes in the U.S. dollar exchange rate is sensitive to commodity price assumptions. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
4. Zinc includes 307,500 tonnes of refined zinc and 635,000 tonnes of zinc contained in concentrate.
5. Bitumen volumes from our energy business unit.
6. Our WTI oil price sensitivity takes into account our interest in Fort Hills for respective change in revenue, partially offset by the effect of the change in diluent purchase costs as well as the effect on the change in operating costs across our business units, as our operations use a significant amount of diesel fuel.

Slide 43: Tax-Efficient Earnings In Canada
1. As at December 31, 2018.

Slide 44: Share Structure & Principal Shareholders
1. As at December 31, 2018.
Sustainability
Sustainability Strategy

- Strong sustainability performance enabled by a strategy built around developing opportunities and managing risks
- Implementing a sustainability strategy with short-term, five-year goals and long-term goals stretching out to 2030

Goals cover the six areas of focus representing the most significant sustainability issues and opportunities facing our company.
Why Sustainability Matters

- Reduced risk of operations disruption
- Efficient project and permit approvals
- Meet rising supply chain and societal expectations
- Employee retention and recruitment
- Increased access to capital at a lower cost
- Increased cost savings and productivity
- Higher financial returns
- Brand value and reputation
Health and Safety Performance

• Safety performance in 2018
  - 28% reduction in High-Potential Incidents
  - 21% decrease in Lost-Time Injury Frequency
• Conducted Courageous Safety Leadership training with 97% of employees
• Two fatalities in 2018: one at Fording River Operations and one at Elkview Operations. Carried out in-depth investigations into the incidents to learn as much as possible and implement measures to prevent a reoccurrence

62% reduction in High-Potential Incident Frequency rate over past four years
Leading Practices in Tailings Management

Transparency

• Details on all tailings facilities available online
• Dam Safety Inspections publically available on our website

Collaboration

• Actively engaged on the International Council on Mining and Metals (ICMM) Tailings Position Statement and Governance Framework
• Participant in ICMM’s leadership work on an aspirational goal of reducing reliance on conventional tailings practices

Full table and additional information available at www.teck.com/tailings
Comprehensive systems and procedures in place based on six pillars:

1. Surveillance Technology
2. Staff Inspections
3. Annual External Inspections
4. Internal Review
5. Detailed Third-Party Reviews
6. Independent Review Boards

Full emergency preparedness plans in place at relevant facilities:
- Plans reviewed with local stakeholders
- Drills and community meetings conducted

Tailings management and emergency response aligned with the Mining Association of Canada Towards Sustainable Mining Protocols.

Reducing Freshwater Use
Teck in top 10 of 50+ companies ranked by DJSI

- Water recycled average of 3 times at mining operations in 2018
- Target to reduce freshwater use at Chilean operations by 15% by 2020
- Desalinated seawater for Quebrada Blanca 2 project in place of freshwater; 26.5 million m³ per year

DJSI Water Related Risk Assessment
2018 Percentile Rankings

Teck
(84th percentile)

Related SASB¹ Metric: EM-MM-140a.1 | Link to Data
Taking Action on Climate Change
Teck in top 5 of 50+ companies ranked by DJSI

• Goal to reduce GHG emissions by 450,000 tonnes by 2030 and have already reduced 289,000 tonnes of emissions as a result of projects implemented since 2011

• Advocating for climate action – member of Carbon Pricing Leadership Coalition

• Releasing second Climate Action and Portfolio Resilience report in 2019, which is structured to align with the recommendations from the Task Force on Climate Related Financial Disclosure

Related SASB Metric: EM-MM-110a.2 | Link to Data
Lower-Risk Jurisdictions, Comprehensive Assessments
Teck in top 5 of 50+ companies ranked by DJSI

- All operations in countries with well-developed mining industries: Canada, United States, Chile, Peru
- Robust regulatory regimes and rule of law in place
- Strong foundation for protection of human rights
- Human rights assessments conducted at all operations in 2018

DJSI Human Rights Assessment 2018 Percentile Rankings

Related SASB\textsuperscript{1} Metric: EM-MM-210b.1 | Link to Data
Strengthening Relationships with Indigenous Peoples

- Agreements in place at all mining operations within or adjacent to Indigenous Peoples’ territories
- Achieved agreements with all Indigenous communities near the QB2 project
  - 8 of 8 agreements with Indigenous communities
  - 7 of 7 agreements with fishermen’s unions
- Achieved agreements with 14 out of 14 potentially affected Indigenous groups near our Frontier project
- Working with UN Women in Chile to advance economic opportunities for Indigenous women

Related SASB¹ Metric: EM-MM-210a.3 | Link to Data
Employee Relations and Diversity

- 57% of our employees are unionized and there were zero strikes in 2018
- Collective agreements at Quebrada Blanca, Line Creek and Carmen de Andacollo operations set to expire in 2019; collective agreement at Antamina currently expired
- Focused on strengthening diversity, with women making up 26% of new hires in 2018
- In 2018, 9% of total hires self-identified as Indigenous from our Red Dog, Highland Valley Copper and steelmaking coal operations in the Elk Valley

Related SASB¹ Metrics: EM-MM-310a.1 | Link to Data

Innovation
Changing Landscape in the Mining Sector

While technology has been a driving force of improvement in mining, the basic operating system has remained unchanged for decades.

In most industries, companies that move slowly to seize digital and analytics opportunities are falling behind or even disappearing.

With the expansion in analytics, automation and digital tools, we can now transform mining, adopt a manufacturing model to unlock significant value and competitive advantage.

Teck is pursuing a transformation of our business – called RACE21™ with some elements already underway.
Teck is Actively Pursuing a Transformation Of Our Business Through Technology

RACE21™

RENEW
Modernize Teck’s technology foundation

AUTOMATE
Accelerate and scale autonomy program

CONNECT
Develop digital platform for sensing and analytics

EMPOWER
Design future operating model to empower our employees
Our conviction is that the potential exists to transform mining, adopt a manufacturing model to unlock significant economic value and competitive advantage.
Why Pursue a Technology Transformation?
Technology leadership could create multiple opportunities

INTERNALLY
A new operating model and capabilities to extract more value from the long-life resources Teck owns for a more sustainable future

WITHIN THE INDUSTRY
A source of strategic advantage to identify undervalued assets, and attract the best partners

BEYOND THE MINING INDUSTRY
We could leverage our capabilities to explore opportunities in the broader global innovation ecosystem
Significant Value To Be Captured

**SAFETY**
Transformational safety impact with fewer people in high risk environments

**PROFITABILITY**
Step-change impact to profitability

**PRODUCTIVITY**
Increased productivity through new technologies and internal innovation

**COST**
Reduced operational costs by achieving manufacturing levels of variability

*Example value capture areas: Autonomy, Integrated Operations, Advanced Analytics, Real Time Data Systems*
Steelmaking Coal
Business Unit & Markets
Steelmaking Coal Facts

Global Coal Production\(^1\): 7.5 billion tonnes

Steelmaking Coal Production\(^2\): ~1,140 million tonnes

Export Steelmaking Coal\(^2\): ~330 million tonnes

Seaborne Steelmaking Coal\(^2\): ~290 million tonnes

- ~0.7 tonnes of steelmaking coal is used to produce each tonne of steel\(^3\)
- Up to 100 tonnes of steelmaking coal is required to produce the steel in the average wind turbine\(^4\)
Steelmaking Coal Demand Growth Forecast
Growth drivers: Western Europe, India and Southeast Asia

Seaborne Steelmaking Coal Imports¹ (Mt)
Change 2019 vs. 2018

Includes:
- India: Driven by secular demand and government growth targets
- Southeast Asia: Growth mostly from Vietnam
- China: Seaborne YTD July 2019 imports up by +2Mt
- Brazil: Analyst views ranging from -3 Mt to +2 Mt²
Indian Steelmaking Coal Imports
Imports supported by secular demand and government growth targets

Indian Crude Steel Production\(^1\) (Mt)

Indian Seaborne Coking Coal Imports\(^2\) (Mt)

2019E is June year-to-date annualized for crude steel production and April year-to-date annualized for seaborne coking coal imports.
Growing India Steelmaking Coal Imports
India plans to achieve 300 Mt of crude steel capacity by 2030-2031

ZONGHENG FENG NAN PROJECT
- Inland plant relocating to coastal area
- Capacity: crude steel 20 Mt
- Status: Construction started in 2017; completion in 2020

HBIS LAOTING PROJECT
- Inland plant relocating to coastal area
- Capacity: crude steel 8 Mt
- Status: Construction started in 2017; 2 of 5 BFs completed by May 2019; remaining 3 BFs to complete in 2020

SHOU GANG JING TANG PLANT
- Expansion
- Capacity: crude steel 9.4 Mt (phase 2)
- Status: Construction started in 2015; 1 of 2 BFs completed in Apr 2019

BAO WU YAN CHENG PROJECT
- Inland plant relocating to coastal area
- Capacity: crude steel 20 Mt (phase 1: 8~10 Mt)
- Status: Phase 1 construction started in May 2019

LIU STEEL FANG CHENG PROJECT
- Greenfield project
- Capacity: Phase 1 crude steel ~10 Mt
- Status: Construction started in 2017; 1 of 4 BFs to complete in Sep 2019

BAO WU ZHAN JIANG PLANT
- Expansion
- Capacity: crude steel 3.6 Mt (phase 2)
- Status: Construction started in Apr 2019; completion in 2021
Chinese Steel Margins
Margins have declined but remain positive

Sales to India Exceeded China from 2018
An Integrated Long Life Coal Business

- 940 million tonnes of reserves support ~27 Mt of production for many years
- Geographically concentrated in the Elk Valley
- Established infrastructure and capacity with mines, railways and terminals
26.0-26.5 million tonnes in 2019

- Advancing production in new areas to fully offset Coal Mountain closure

27-28 million tonnes in 2020 and beyond

- Investment in plant throughput capacity at Elkview to capitalize on lower strip ratio beginning in 2020

Investing in low capital intensity production capacity to maximize near term profit generating potential
Maximizing Cash Flow in Any Steelmaking Coal Market

High Price Environment
• Production focus to capture high margins and maximize free cash flow\(^1\)
  – Utilize higher cost equipment, contractor labour, internal overtime, & intersite processing to increase production

Low Price Environment
• Cost focus to protect margins and maximize free cash flow\(^1\)
  – Parking higher cost equipment, reduced contractor trades and mining reliance, hiring freeze, lower material movement
  – Emphasis on cost reduction initiatives

IFRS 16 Capital Lease Impact
Setting Up for Strong Long-Term Cash Flows In Steelmaking Coal

Strip ratio increase planned in 2019 to advance clean coal expansion
• Future strip ratio on par with historical average

Elkview Operations driving the increase in clean coal strip ratio to advance ability to produce at 9 million tonne rate by 2021
• Elkview strip ratio drops from 11.8 in 2019 to 6.9 by 2023
  - 2018-2029 average of 9.2
Reinvesting to Maintain Productivities And Manage Costs in Steelmaking Coal

Maintaining historical dollar per tonne sustaining investment levels

2010-2016: Average spend of ~$6 per tonne¹
• Reinvestment in 5 shovels, 50+ haul trucks

2017-2023: Average spend of ~$6 per tonne¹
• Reinvestment in equipment fleets and technology to increase mining productivity and processing capacity

Long term run rate for sustaining capital is ~$6 per tonne

¹ Sustaining Excluding Water Treatment
Major enhancement projects increasing long-term production capacity:
• SWIFT at Fording River Operations
• Baldy Ridge Extension at Elkview Operations
• 9 Million project at Elkview Operations

2010-2016: Average spend of $160 million per year
• Increased production capacity by ~3.5 million tonnes

2017-2023: Average spend of $134 million per year
• Increasing production capacity for 2020-2026 production by ~3 million tonnes per year
  - Increasing plant capacity at Elkview Operations (EVO 9M)
Progress on Reducing Long-Term Water Treatment Costs

Saturated Rock Fills (SRF) demonstrated to be a direct replacement for current Active Water Treatment Facilities (AWTF), subject to regulatory approval

SRF strategy could reduce water capital to $600 million to $650 million in 2018-2022:
- SRF capital costs ~20% of current permitted treatment option (AWTF)
- SRF operating costs are ~50% of AWTF

The B.C. Government has endorsed SRFs and we have received approval to begin construction to expand the SRF at our Elkview Operations to 20,000 m³ per day:
- Also advancing first pilot at Fording River
SRF permitted would reduce water capital to $600 million to $650 million\(^3\)
- 1 LCO\(^4\) AWTF completed
- EVO\(^4\) SRF
- FRO\(^4\) AWTF–South
- Replacing FRO AWTF-North with SRF capacity

Previous guidance of $850 million to $900 million
- 1 LCO AWTF completed
- Construction of 3 AWTFs
  - EVO AWTF
  - FRO AWTF-North
  - FRO AWTF-South

AWTF revised requires ~$250 million in additional capital
- Needed if SRF strategy is not permitted
- Design scope change at EVO AWTF
- Increased design capacity at FRO AWTF–North
SALES MIX
- ~40% quarterly contract price
- ~60% shorter than quarterly pricing mechanisms (including “spot”)

PRODUCT MIX
- ~75% of production is high-quality HCC
- ~25% is a combination of SHCC, SSCC, PCI and a small amount of thermal
- Varies quarter-to-quarter based on the mine plans

KEY FACTORS IMPACTING TECK’S AVERAGE REALIZED PRICES
- Variations in our product mix
- Timing of sales
- Direction and underlying volatility of the daily price assessments
- Spreads between various qualities of steelmaking coal
- Arbitrage between FOB Australia and CFR China pricing

Index Linked Sales
- Quarterly contract sales index linked
- Contract sales index linked
- Contract sales with index fallback
- Spot sales index linked

Fixed Price Sales
- Contract sales spot priced
- Contract sales with index fallback
- Spot sales with fixed price
Quality and Basis Spreads
Impact Teck’s average realized steelmaking coal prices
~75 Mtpa of West Coast Port Capacity Planned
Teck port capacity exceeds current production plans, including Quintette

WESTSHORE TERMINALS
- Current capacity 33 Mtpa
- ~$275 million upgrade to 35 Mtpa by 2019
- Teck is largest customer at 19 Mtpa
- Contract expires March 31, 2021

NEPTUNE COAL TERMINAL
- Teck / Canpotex Joint Venture
- Current capacity 12.5 Mtpa
- Significant investment to upgrade and rejuvenate
- Planned growth to > 18.5 Mtpa

RIDLEY TERMINALS
- Current capacity 16 Mtpa
- Teck contracted at 3 Mtpa
- Planned growth to > 20 Mtpa

West Coast Port Capacity (Nominal Mt)

Subject to market conditions and obtaining relevant permits.

Free cash flow is a non-GAAP measure. See “Non-GAAP Financial Measures” slides.

Assumes cost of sales of $63/tonne for 2019. Effective January 1, 2019, the IFRS 16 accounting standard change required the capitalization of equipment leases historically included in cost of sales. This policy change is expected to decrease cost of sales by ~$2/tonne, therefore a cost of sales figure of $65/tonne should be used for comparison to historical figures.

Reflects weighted average strip ratio of all coal operations. Cardinal River Operations includes the Mackenzie Redcap project.

1. Reflects weighted average strip ratio of all coal operations. Cardinal River Operations includes the Mackenzie Redcap project.

2. Assumes cost of sales of $63/tonne for 2019. Effective January 1, 2019, the IFRS 16 accounting standard change required the capitalization of equipment leases historically included in cost of sales. This policy change is expected to decrease cost of sales by ~$2/tonne, therefore a cost of sales figure of $65/tonne should be used for comparison to historical figures.

1. Historical spend has not been adjusted for inflation or foreign exchange. 2019-2023 assumes annualized average production of 28.6 million tonnes and excludes the impact of the change in accounting for leases under IFRS 16. All dollars referenced are Teck’s portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of sustaining capital relating to water treatment and Neptune Terminal. Water capital is addressed in “Progress on Reducing Long-Term Water Treatment Costs” slide.

1. Historical spend has not been adjusted for inflation or foreign exchange. 2019-2023 assumes annualized average production of 28.6 million tonnes and excludes the impact of the change in accounting for leases under IFRS 16. All dollars referenced are Teck’s portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of major enhancement capital relating to the Neptune Facility Upgrade.

1. Historical spend has not been adjusted for inflation or foreign exchange. 2019-2023 excludes the impact of the change in accounting for leases under IFRS 16.

2. All dollars referenced are Teck’s portion net of POSCAN credits for Greenhills Operations at 80% and excludes the portion of major enhancement capital relating to the Neptune Facility Upgrade.

3. Swift, Baldy Ridge Extension, and Elkview 9M project spending in 2019 is noted to illustrate the peak in major enhancement spending. All projects have spending prior and subsequent to 2019.

Water capital figures present total spending, a portion of which will be paid by POSCAN joint venture partner. Future POSCAN amounts are not yet determinable as the percentage varies year-to-year with selenium load factors which are measured annually. For further information, please see “Water Treatment Capital” slide.

Water capital figures present total spending, a portion of which will be paid by POSCAN joint venture partner. Future POSCAN amounts are not yet determinable as the percentage varies year-to-year with selenium load factors which are measured annually.

2. All capital scenarios exclude $40M in research and development for construction of the SRF full scale trial substantially completed in 2017 and commissioned at Elkview Operations in early 2018. LCO AWTF capital spend in 2018 was $22M for completion of the Advanced Oxidation Process. Dollars are unadjusted for the POSCAN joint venture portion.

3. Best case replaces construction of 2 of the 3 AWTF’s identified in previous guidance with SRFs at 20% of construction costs. Best case includes ~$130M to progress construction of replaced AWTFs in 2018 and 2019 until SRF strategy is permitted.

4. LCO stands for Line Creek Operations, FRO stands for Fording River Operations, and EVO stands for Elkview Operations.

1. HCC price is average of the Argus Premium HCC Low Vol, Platts Premium Low Vol and TSI Premium Coking Coal assessments, all FOB Australia and in US dollars. SHCC price is average of the Platts HCC 64 Mid Vol and TSI HCC assessments, all FOB Australia and in US dollars. Source: Argus, Platts, TSI. Potted to July 31, 2019.

(Copper content, kt)
Copper Metal Stocks
Better than expected demand; smelter disruptions

- Production cuts at Asian smelters combined with lower scrap availability contributed to a drawdown in cathode stocks.
- Exchange stocks have fallen 379,000 tonnes since March 2018, now equivalent to just over one week’s global consumption.
- Copper stocks across exchange and bonded warehouses are down 135,000 tonnes since the end of March 2019.
- Prices have weakened over the last quarter falling below $6,000/mt to $5,670/mt, the lowest levels since early 2017.
- At current prices, into the 90th percentile of C2 Cost Curve.
Copper Supply / Demand Balance

Long Life and Stable Assets in Copper

Antamina
• H1 copper production of 50,000 tonnes, guidance maintained at 95,000 to 100,000 tonnes in 2019
• Lower zinc in 2019, increasing in 2020
• New 3-year collective agreement
• Higher recoveries driving increased copper production
• Technology focus with autonomous haulage, shovel-based ore sorting, and advanced analytics
• D3 mill project complete in Q2 2019, ahead of schedule and under budget

Highland Valley

Carmen de Andacollo
• June thickener failure impacted Q2 2019 copper production, no impact to annual guidance
• Improved sizer availability and mill throughput in H2 2019

Quebrada Blanca
• Copper production on track with leaching operations
• Mine fleet supporting QB2 earthworks
• QB2 operations readiness well advanced

Foundation of Stable Operations
Cost Discipline and Improvement Focus in Copper

Operating Expenses & Productivity
- Cross site sharing in asset management continues to improve availabilities and reduce costs
- Robust continuous improvement pipeline is a key driver of margins

Supply Management at Teck
- Leveraging Teck-wide spending
- 7 primary categories started in 2010 with >$50 million in sustained annual savings
- 6 more categories added in 2018
  - Additional $30 million in annual savings
- China sourcing initiative

Focused Investment Priorities
- Numerous projects finishing in 2019 and early 2020
  - D3 Ball Mill at HVC, QB1 water management
- Near term spending driven by tailings facility cost at Antamina – declining in 2022
- Long-term sustaining capex in copper expected at $125 million, excluding QB2

Copper Sustaining Capital Profile (C$M)
Major Growth and Life Extension Projects in Copper
Setting up for long-term success

Quebrada Blanca
• QB2: 316 kt of CuEq production for first 5 years\(^1\)
  - Doubles copper production with low strip ratio and AISC of US$1.38/lb copper\(^2\)
• QB3: Scoping Study on expansion potential in progress
  - Mineral resource supports up to 3 times milling rate, with low strip ratio and low anticipated AISC\(^2\)
  - Capitally efficient, leveraging QB2 infrastructure

NuevaUnión
• Feasibility Study (FS) completion in Q1 2020

Life Extension Projects
• HVC 2040 FS completion expected H1 2020
  - Targeting ~13 year extension
• Antamina advancing extension and debottlenecking studies
• Red Dog resource definition drilling ongoing on Aktigiruq and Anarraaq deposits
Notes: Appendix – Copper

Slide 93: Global Copper Mine Production Increasing Slowly
1. Source: Data compiled by Teck based on information from Wood Mackenzie and Company Reports (average production first 10 years)

Slide 98: Copper Supply / Demand Balance
1. Source: Wood Mackenzie, ICA, Yale, Teck. Low Demand based on Wood Mackenzie forecast demand outlook. Base Case Demand based on Teck copper demand model. High Demand based on combination of ICA study done for long term Copper Demand and a Yale University study done based on IEA forecasts for 2DS on Climate reduction goals.
2. Source: Wood Mackenzie, ICA, Yale, Teck. Forecasts based on projects from Wood Mackenzie Probable list of projects from Q4 2018 flexed at their historic rates of probable projects entering production (70% of Probable Brownfields, 50% of Probable Greenfield projects and an allowance for unidentified mine extensions based on historic precedent that 20% of capacity projected to close will stay open through such extensions).

Slide 101: Major Growth and Life Extension Projects in Copper
1. Copper equivalent production calculated for the first 5 full years of production assuming US$3.00/lb copper, US$10.00/lb molybdenum and US$18.00/oz silver without adjusting for payability.
2. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See “Non-GAAP Financial Measures” slides.
Environmental Policy Decreasing Chinese Production

**Chinese Mine Production Down 2.4% in 2018¹**
(kt Contained)

**Chinese Refined Production Down 3.4% in 2018²**

² Chinese Refined Production is measured in kilo tonnes (kt) contained.
Increasing Demand for Zinc Metal Imports

Smelter cutbacks led to drawdown of warehouse inventories – now record low; If China does import 1.7 Mt of concentrates, still requires 1.4 Mt of metal imports
Zinc Supply
Mine production missed forecast in 2018

• Teck originally forecast global mine production would grow 7.9% or over 800,000 tonnes in 2018
  – Due to start up of large mines, Dugald River, Gamsberg, New Century and restarts by Glencore

• Global mine production in 2018 missed Teck’s forecast by almost 600,000 tonnes
  – Slow or delayed start-ups at New Century, Gamsberg, and several smaller mines
  – China originally expected to increase 250,000 tonnes contained in 2018, but now estimated to be down 110,000 tonnes contained in 2018

• Today, Teck forecasted an 8.1% increase in mine production in 2019, now down to 5.6%
  – Mine guidance has already decreased around 400 thousand tonnes in H1 2019
  – Chinese environmental inspections continue at domestic mines and may restrict production into H2 2019
Chinese Zinc Mine Projects Delayed
Impacted by inspections and low zinc ore grades

Estimated Chinese Zinc Mine Growth
Rarely Achieved¹ (Kmt Contained)

Chinese Mine Growth 2019-2021 Heavily Dependent On Single Project² (kt contained)

Zinc Ore Grades Falling at Chinese Mines³
(Ore grade, zinc %)
Zinc Concentrate Treatment Charges

Treatment Charges\(^1\) (USD/dmt)

Jan-10  Jan-11  Jan-12  Jan-13  Jan-14  Jan-15  Jan-16  Jan-17  Jan-18  Jan-19

Spot TC  Benchmark TC

\(^1\) Treatment Charges refer to the cost of processing zinc concentrates, with Spot TC representing the market price and Benchmark TC indicating a standardized fee.
Zinc Metal Stocks
Consecutive deficits decreasing zinc inventories

- Deficits in past 5 years have driven down stocks
- LME refined zinc stocks have decreased 61,500 tonnes year-to-date in 2019
- Less than 68,000 tonnes of refined zinc remaining on LME
- SHFE stocks have increased 55,100 tonnes year-to-date in 2019
- Decreased Chinese refined production is increasing demand for refined imports into China
- Smelter cuts announced in YTD 2019:
  - Elektrozinc Russia (80,000 tonnes) permanently closed due to safety infractions following a fire at the smelter
  - Skorpion closing for 5 weeks, strike at mine reduces oxide stockpiles
  - Suspension of Mooresboro after fire in cell house.

![Daily Zinc Prices and Stocks](chart.png)
Zinc Supply / Demand Balance
Zinc mine production peaks in 2021

- Assumed average growth to 2024:
  - High Demand (2.0%): 1.5 million tonne gap
  - Base Demand (1.2%): 0.7 million tonne gap
  - Low Demand (0.7%): 0.5 million tonne gap
Largest Global Net Zinc Mining Companies

**Teck is the Largest Net Zinc Miner\(^1\) (kt)**

Provides significant exposure to a rising zinc price

![Bar chart showing Teck as the largest net zinc miner among public and private companies.](chart.png)
Integrated Zinc Business

Red Dog

- Strong Q2 2019 production offset difficult Q1 winter weather conditions
- Higher lead guidance, lower unit costs
- Shipping season progressing well
- VIP2 project advancing to commissioning in 2020 and expected to improve throughput by ~15%

Trail

- Zinc production impacted by recent electrical equipment failure in refinery
- Acid Plant #2 project completed ahead of schedule and under budget
- Focus on margin improvement including automation in melting plant
- Improving outlook for TC/RC’s and profitability in 2020

Pend Oreille

- Care and maintenance started in August
- Decision on path forward anticipated end 2019

Strengthening our Zinc Business
Cost Discipline and Improvement Focus in Zinc

Operating Expenses & Productivity
- Cross site sharing in asset management continues to improve availabilities and reduce costs
- Robust continuous improvement pipeline is a key driver of margins

Supply Management at Teck
- Leveraging Teck-wide spending
- 7 primary categories started in 2010 with >$50 million in sustained annual savings
- 6 more categories added in 2018
  - Additional $30 million in annual savings
- China sourcing initiative

Focused Investment Priorities
- Numerous projects finishing in 2019 and early 2020
  - VIP2 at Red Dog, Acid Plant #2 at Trail
- Near term spending driven by tailings facility cost at Red Dog – declining in 2022
- Long-term sustaining capex in zinc expected at $150 million

Zinc Sustaining Capital Profile (C$M)
Red Dog Sales Seasonality

- Operates 12 months
- Ships ~ 4 months
- Shipments to inventory in Canada and Europe; Direct sales to Asia
- ~65% of zinc sales in second half of year
- ~100% of lead sales in second half of year
Red Dog Operating Cost Seasonality
Significant quarterly variation

• Seasonality of Red Dog unit costs largely due to lead sales during the shipping season
• Zinc is a by-product credit at Antamina and accounted for in the Copper Business Unit
Red Dog in Bottom Quartile of Zinc Cost Curves

Total Cash + Capex Cost Curve 2020\(^1\) (US\(\text{¢}/\text{lb}\))

- 2020 Costs Based on Current Prices
- Current Spot LME Price

RED DOG
Red Dog Extension Project

Long Life Asset
• Aktigiruq exploration target of 80-150 Mt @ 16-18% Zn + Pb
• Anarraaq Inferred Resource: 19.4 Mt @14.4% Zn, 4.2% Pb

Quality Project
• Premier zinc district
• Significant mineralized system
• High grade

Stable Jurisdiction
• Operating history
• ~12 km from Red Dog operations
• Strong community ties

Path to Value Realization
• 2001: Initial drill hole
• 2017: Exploration target announced
• Next 18 months: Advancing delineation

\(^1\) Western Canadian crude oil production and export capacity

Existing Pipeline/Rail Sufficient to Meet Takeaway Capacity Through 2023
Lower Carbon Intensity Product at Fort Hills
Comparable to the average barrel refined in the U.S.

PFT Diluted Bitumen has a Lower Carbon Intensity Than Around Half of the Barrels of Oil Refined in the US, on a Wells-to-Wheels Basis
(Total carbon intensity - kgCO2e per barrel of refined products)

- Paraffinic Froth Treatment (PFT) removes asphaltenes
- Best in-class Canadian oil sands carbon intensity, including in-situ
- Pushing technology for continuous improvement

Fort Hills Blend Widely Accepted In Market

We produce a high quality refinery feedstock
• Low GHG intensity: <50% of US crude supply
• Including in-situ and upgraded synthetic

Our sales mix provides diverse market access
• 80% pipeline connected and 20% rail loading
• 10 Kbpd to US Gulf Coast and 39.5 Kbpd at Hardisty

We are Well-Positioned for Future Opportunities
Fort Hills blend sales subject to crude quality differential vs Western Canadian Select:

- Estimated at minus US$3.50/bbl for 2020
Quality Barrels in a Progressive Jurisdiction
4th largest oil sands mining portfolio

Fort Hills in operation
• Teck 21.3% = 0.6 billion barrels

Frontier in the regulatory phase
• Teck 100% = 3.2 billion barrels

Lease 421: future growth
• Teck 50%
• High quality lease: high grade, high recovery, low fines

Strong Strategic Fit: Long Life Mining Assets and Low Operating Costs
Our Energy Strategy

Maximizing value of Fort Hills
• Start-up complete, increase production volumes, lower costs

De-risking Frontier & Lease 421
• Frontier regulatory hearing completed in 2018, decision in early 2020

Driving business results through technology & innovation
• Safe & reliable production, cost and footprint

Focus on Maximizing Shareholder Value and Positioning Teck as a Partner of Choice
Fort Hills is a Modern Mine
Built for low cost operations

201,000 bpd

Sharp Focus On Reducing Costs (Operating and Capital)
Slide 123: Energy Benchmark Pricing

Slide 125: Export Capacity Needed to Meet Global Demand

Slide 126: Lower Carbon Intensity Product at Fort Hills

Slide 128: Quality Barrels in a Progressive Jurisdiction
1. Proved and probable reserves as at December 31, 2018. See Teck’s 2018 Annual Information Form available under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov) for further information regarding Fort Hills reserves.
2. Best estimate of unrisked contingent resources as at December 31, 2018, prepared by an independent qualified resources evaluator. Further information about these resource estimates, and the related risks and uncertainties and contingencies that prevent the classification of resources as reserves, is set out in Teck’s management discussion and analysis dated February 12, 2019 available under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov). There is no certainty that the Frontier project will produce any portion of the volumes currently classified as contingent resources.

Slide 131: Fort Hills is a Modern Mine
1. Adjusted operating costs is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 132: Attractive Debottlenecking Opportunities at Fort Hills
1. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 133: Significant EBITDA Upside Potential in Energy
1. EBITDA assumes production is ~90% of stated amounts to account for planned outages. Includes Crown royalties assuming pre-payout phase. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
2. Adjusted operating costs is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.

Slide 134: Teck’s Energy Outlook
1. EBITDA is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides, including Energy Business Unit EBITDA by entity.
2. Adjusted operating costs is a non-GAAP financial measure. See “Non-GAAP Financial Measures” slides.
3. Teck’s share of production assumes ~90% of nameplate capacity to account for planned outages.
4. Life of Mine operating cost estimate represents the Operator’s estimate of costs for the Fort Hills mining and processing operations and do not include the cost of diluent, transportation, storage or blending. Estimates of Fort Hills operating costs could be negatively affected by delays in or unexpected events involving the ramp up of production. Steady state operations assumes full production of ~90% of nameplate capacity of 194,000 barrels per day.
5. Sustaining cost estimates represent the Operator’s estimate of sustaining costs for the Fort Hills mining and processing operations. Estimates of Fort Hills sustaining costs could be negatively affected by delays in or unexpected events involving the ramp up of production. Fort Hills has a >40 year mine life.
Energy Business Unit Modelling
Operating Netback – Q2 2019

- Operating netback is a non-GAAP measure, **presented on a product and sales barrel basis** on page 25 of the Q2 2019 news release.
- Derived from the Energy segmented information (P&L), after adjusting for items not directly attributable to the revenues and costs associated with production and delivery of our proprietary Fort Hills product.
- Excludes depreciation, taxes and other costs not directly attributable to production and delivery of Fort Hills product.

1. Reflects adjustments for costs not directly attributed to the production of Fort Hills bitumen, including transportation for non-proprietary product purchased.

2. Bitumen price realized represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis.

Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from the Fort Hills oil sands mining and processing operations blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar. Calculated per unit amounts may differ due to rounding.

We include unit cost information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in our industry.
Blended Bitumen Price Realized Reconciliation

Modelling Bitumen Price Realized – Q2 2019
Non-GAAP Financial Measure

Bitumen price realized = (blend sales\(^A\) – diluent expense\(^B\)) / bitumen bbls sold\(^C\)

A. Blend sales

\[= \text{blend sales @ Hardisty} + \text{blend sales @ U.S. Gulf Coast (USGC)}\]
\[= $290 \text{ per “Blended Bitumen Price Realized Reconciliation” and “Reconciliation of Energy Gross Profit”}\]

- Blend sales @ Hardisty = \[[(\text{WTI} – \text{WTI/WCS differential @ Hardisty} – \text{negotiated differential}) \times \text{F/X rate}] \times \# \text{ of barrels sold at Hardisty}\]
- Blend sales @ USGC = \[[(\text{WTI} – \text{WTI/WCS differential @ USGC} – \text{negotiated differential}) \times \text{F/X rate}] \times \# \text{ of barrels sold at USGC}\]

***WTI/WCS differentials are not the same at Hardisty vs. USGC

B. Cost of diluent for blending:

\[= \text{Cost of diluent product} + \text{diluent transportation/storage} + \text{blending cost}\]
\[= $90 \text{ per “Cost of Sales Summary Table” and “Reconciliation of Energy Gross Profit”}\]

- Cost of diluent product = \[[(\text{WTI} +/- \text{condensate premium/discount}) \times \# \text{ of diluent barrels sold in blend}] \times \text{F/X rate}\]

***Diluent contained in a barrel of blend ranges from approximately 20% to 25% depending on the quality of blend and season (temperature)

- Diluent transportation and blending cost includes tolls on the Norlite pipeline, East Tank Farm blending facility and diluent storage at Fort Saskatchewan

C. Bitumen barrels sold – as provided on the “Operating Netback Reconciliation”

EBITDA potential (14 Mbpd x cash margin) ~C$500M
1. EBITDA is a non-GAAP financial measure. This model is being provided to illustrate how Teck calculates EBITDA for its Energy business unit. The figures included are not forecasts of projected figures of Teck’s Energy EBITDA. See “Non-GAAP Financial Measures” slides.
Non-GAAP Financial Measures
Our financial results are prepared in accordance with International Financial Reporting Standards (IFRS). This document refers to a number of Non-GAAP Financial Measures, which are not measures recognized under IFRS in Canada and do not have a standardized meaning prescribed by IFRS or Generally Accepted Accounting Principles (GAAP) in the United States. The Non-GAAP Measures described below do not have standardized meanings under IFRS, may differ from those used by other issuers, and may not be comparable to such measures as reported by others. These measures have been derived from our financial statements and applied on a consistent basis as appropriate. We disclose these measures because we believe they assist readers in understanding the results of our operations and financial position and are meant to provide further information about our financial results to investors. Free cash flow is presented to provide a means to evaluate shareholder returns. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS.

EBITDA is profit attributable to shareholders before net finance expense, income and resource taxes, and depreciation and amortization. EBITDA margin for our operations as business units is EBITDA (as described above) for those operations and business units, divided by the revenue for the relevant operation or business unit for the year-to-date. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US$10.00/lb molybdenum and US$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Gross profit before depreciation and amortization is gross profit with the depreciation and amortization expense added back. We believe this measure assists us and readers to assess our ability to generate cash flow from our business units or operations. Unit costs for our steelmaking coal operations are total cost of goods sold, divided by tonnes sold in the period, excluding depreciation and amortization charges. We include this information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in the industry. Adjusted site cost of sales for our steelmaking coal operations is defined as the cost of the product as it leaves the mine excluding depreciation and amortization charges, outbound transportation costs and any one-time collective agreement charges and inventory write-down provisions. Total cash unit costs for our copper and zinc operations include adjusted cash costs of sales, as described above, plus the smelter and refining charges added back in determining adjusted revenue. This presentation allows a comparison of total cash unit costs, including smelter charges, to the underlying price of copper or zinc in order to assess the margin for the mine on a per unit basis. Net cash unit costs: Net cash unit costs of principal product, after deducting co-product and by-product margins, are also a common industry measure. By deducting the co- and by-product margin per unit of the principal product, the margin for the mine on a per unit basis may be presented in a single metric for comparison to other operations. Readers should be aware that this metric, by excluding certain items and reclassifying cost and revenue items, distorts our actual production costs as determined under IFRS. Cash margins for by-products is revenue from by-products and coproducts, less any associated cost of sales of the by-product and co-product. In addition, for our copper operations, by-product cost of sales also includes cost recoveries associated with our streaming transactions. Adjusted operating costs for our energy business unit are defined as the costs of product as it leaves the mine, excluding depreciation and amortization charges, cost of diluent for blending to transport our bitumen by pipeline, cost of non-proprietary product purchased, and transportation costs of our product, and non-proprietary product and any one-time collective agreement charges or inventory write-down provisions. Operating netbacks per barrel in our energy business unit are calculated as blended bitumen sales revenue net of diluent expenses (also referred to as bitumen price realized), less Crown royalties, transportation and operating expenses divided by barrels of bitumen sold. We include this information as investors and investment analysts use it to measure our profitability on a per barrel basis and compare it to similar information provided by other companies in the oil sands industry.

</tbody>
</table>

1. Reflects adjustments for costs not directly attributed to the production of Fort Hills bitumen, including transportation for non-proprietary product purchased.

2. Bitumen price realized represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis. Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from the Fort Hills oil sands mining and processing operations blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar. Calculated per unit amounts may differ due to rounding.

We include unit cost information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in our industry.

1. Bitumen price realized represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis. Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from the Fort Hills oil sands mining and processing operations blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar. Calculated per unit amounts may differ due to rounding.
