Teck

Caution Regarding Forward-Looking Statements

Both these slides and the accompanying oral presentations contain certain forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 and forward-looking information within the meaning of the Securities Act (Ontario) and comparable legislation in other provinces (collectively referred to herein as forward-looking statements). Forward-looking statements can be identified by the use of words such as “plans”, “expects” or “does not expect”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates” or “does not anticipate”, or “believes”, or variation of such words and phrases or state that certain actions, events or results “may”, “could”, “should”, “would”, “might” or “will” be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Teck to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements.

These forward-looking statements include, but are not limited to, statements concerning: the potential impact of the COVID-19 on our business and operations, including our ability to continue operations at our sites; our ability to manage challenges presented by COVID-19; expectations regarding our QB2 ramp-up, including but not limited to workforce and progress targets, cost, timing and schedule impacts of the COVID-19 related suspension, and timing of Teck's next contributions; Neptune upgrade cost and timing expectations; cost reduction program targets and timing of achieving those targets; all guidance including but not limited to production, sales, cost, unit cost, capital expenditure, cost reduction and other guidance included in these slides or the accompanying oral presentation; liquidity and availability of borrowings under our credit facilities and the QB2 project finance facility; our strong financial position; expectation that Red Dog will ship all of its production during the shipping season; targets and future expectations stated in the slide titled “Our Key Priorities”; expected EBITDA improvements and other benefits and value to be generated from our RACE21™ innovation-driven efficiency program and the associated implementation costs and timing; focus on increasing margins in our steelmaking coal business unit; all projections and expectations regarding QB2 and QB3, including, but not limited to, those set out in the “Quebrada Blanca” Appendix (including, but not limited to, statements that QB2 will be a world class, low cost copper opportunity, timing of first production, long-life and expansion potential, mine life, projected copper production including Teck's pro-forma copper exposure estimates, strip-ratios, costs (including C1 and AISC), reserves and resources, construction schedule, expansion and extension potential, all production, economic and financial projections regarding the QB2 project, impact of QB2 on Teck's portfolio balance, potential resource upside, expectations and projections regarding QB3 including capacity, and all other projections and expectations regarding the project, expected cost impact of construction suspension); capital expenditure estimates; expectation that there is significant potential Teck share price upside; the statement that Teck is well positioned for the low-carbon economy; availability of the QB2 project finance facility; Teck's share of remaining equity capital and timing of contributions relating to our QB2 project; Teck's long-term strategy goals; potential growth options; objectives and components of Teck's capital allocation framework, including a base dividend and potential supplemental shareholder distribution and maintenance of investment grade metrics; Teck's path to carbon neutrality; Teck's sustainability goals and management; water management targets and timing for achieving those goals; expectations for amount of investment in water management from 2020-2024; expectations for the benefits and timing of innovation and technology to achieve our sustainability goals; goals for our Elk Valley water treatment plan; expectation for timing and benefits for all of our sustainability and strategic priorities and goals and the initiatives related to those priorities and goals; the benefits of our innovation strategy and initiatives described under the “Technology and Innovation” Appendix and elsewhere; mine lives and duration of operations at our various mines and operations; growth potential for our steelmaking coal production, including our expectation that our coal reserves support approximately 27+ million tonnes of production in 2020 and beyond; expectation of strong cash flows in steelmaking coal and zinc; strip ratio expectations, cost of sale targets and the impact of RACE21™; our ability to extend the lives of certain mines and to increase production to offset the closure of other operations; expected long-term sustaining capex in copper; potential life extension at Highland Valley Copper Mine; benefits of our potential zinc projects, including but not limited to the Red Dog extension project; benefits and timing of the Red Dog VIP2 project; projected long-term sustaining capex in zinc; all guidance including but not limited to production guidance, sales and unit cost guidance and capital expenditures guidance; anticipated Fort Hills debottlenecking opportunities; our strong financial position and expectations and forecasts for our products, business units and individual operations and projects.

The forward-looking statements are based on and involve numerous assumptions, risks and uncertainties and actual results may vary materially. These statements are based on assumptions, including, but not limited to, general business and economic conditions, interest rates, the supply and demand for, deliveries of, and the level and volatility of prices of, zinc, copper, coal, blended bitumen, and other primary metals, minerals and products as well as steel, oil, natural gas, petroleum, and related products, the timing of the receipt of regulatory and governmental approvals for our development projects and other operations and new technologies, our costs of production and production and productivity levels, as well as those of our competitors, power prices, continuing availability of water and power resources for our operations, market competition, the accuracy of our reserve estimates (including with respect to size, grade and recoverability) and the geological, operational and price assumptions on which these are based, conditions in financial markets, the future financial performance of the company, our ability to successfully implement our technology and innovation strategy, the performance of new technologies in accordance with our expectations, our ability to attract and retain skilled staff, our ability to procure equipment and operating supplies, positive results from the studies on our expansion projects, our coal and other product inventories, our ability to secure adequate transportation for our products, our ability to obtain permits for our operations and expansions, our ongoing relations with our employees and business partners and joint venturers, our expectations with respect to the carbon intensity of our operations, assumptions regarding returns of cash to shareholders include assumptions regarding our future business and prospects, other uses for cash or retaining cash. Our sustainability goals are based on a number of additional assumptions, including regarding the availability and effectiveness of technologies needed to achieve our sustainability goals and priorities; the availability of clean energy sources and zero-emissions alternatives for transportation on reasonable terms; our ability to implement new source control or mine design strategies and transition to seawater or low-quality water on commercially reasonable terms without impacting production objectives; our ability to successfully implement our technology and innovation strategy; and the performance

Caution Regarding Forward-Looking Statements

of new technologies in accordance with our expectations. In addition, assumptions regarding the Elk Valley Water Quality Plan include assumptions that additional treatment will be effective at scale, and that the technology and facilities operate as expected. Reserve and resource life estimates assume the mine life of longest lived resource in the relevant commodity is achieved, assumes production at planned rates and in some cases development of as yet undeveloped projects. Assumptions regarding the benefits of the Neptune Bulk Terminals expansion and other projects include assumptions that the project is constructed and operated in accordance with current expectations. Our anticipated RACE21™ related EBITDA improvements and associated costs assume that the relevant projects are implemented in accordance with our plans and budget and that the relevant projects will achieve the expected production and operating results, and are based on current commodity price assumptions and forecast sale volumes. Payment of dividends is in the discretion of the board of directors. Assumptions regarding QB2 include assumption of completion based on current project assumptions and assumptions regarding the final feasibility study. Assumptions are also included in the footnotes to the slides.

The forward-looking statements in this presentation and actual results will also be impacted by the effects of COVID-19 and related matters. The overall effects of COVID-19 related matters on our business and operations and projects will depend on how quickly our sites can safely return to normal operations, and on the duration of impacts on our customers and markets for our products, all of which are unknown at this time. Returning to normal operating activities is highly dependent on the progression of the pandemic and the success of measures taken to prevent transmission, which will influence when health and government authorities remove various restrictions on business activities.

Factors that may cause actual results to vary materially include, but are not limited to: extended COVID-19 related suspension of activities and negative impacts on our suppliers, contractors, employees and customers; extended delays in return to normal operations due to COVID-19 related challenges; changes in commodity and power prices, changes in market demand for our products; changes in interest and currency exchange rates; acts of governments and the outcome of legal proceedings; inaccurate geological and metallurgical assumptions (including with respect to the size, grade and recoverability of mineral reserves and resources); unanticipated operational difficulties (including failure of plant, equipment or processes to operate in accordance with specifications or expectations, cost escalation, unavailability of materials and equipment, government action or delays in the receipt of government approvals, industrial disturbances or other job action, adverse weather conditions and unanticipated events related to health, safety and environmental matters); union labour disputes; political risk; social unrest; failure of customers or counterparties (including logistics suppliers) to perform their contractual obligations; changes in our credit ratings; unanticipated increases in costs to construct our development projects, difficulty in obtaining permits; inability to address concerns regarding permits of environmental impact assessments; current and new technologies relating to our Elk Valley water treatment efforts and other sustainability goals and targets may not perform as anticipated or may not be available, and ongoing monitoring may reveal unexpected environmental conditions requiring additional remedial measures; and changes or further deterioration in general economic conditions. EBITDA improvements may be impacted by the effectiveness of our projects, actual commodity prices and sales volumes, among other matters. QB2 timing may be impacted by delays in obtaining permits and other approvals. Timing of first production at QB2 may be impacted by continued suspension of construction due to COVID-19.

We assume no obligation to update forward-looking statements except as required under securities laws. Further information concerning risks and uncertainties associated with these forward-looking statements and our business can be found in our Annual Information Form for the year ended December 31, 2019, filed under our profile on SEDAR (www.sedar.com) and on EDGAR (www.sec.gov) under cover of Form 40-F, as well as subsequent filings, including but not limited to our that can also be found under our profile. Please see our second quarter management's discussion and analysis dated July 22, 2020 for further information concerning the guidance in this presentation.

QB2 Project Disclosure

All economic analysis with respect to the QB2 project based on a development case which includes inferred resources within the life of mine plan, referred to as the Sanction Case, which is the case on which Teck based its development decision for the QB2 project. Inferred resources are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling. Nonetheless, based on the nature of the mineralization, Teck has used a mine plan including inferred resources as the development mine plan for the QB2 project.

The economic analysis of the Sanction Case, which includes inferred resources, may be compared to economic analysis regarding a hypothetical mine plan which does not include the use of inferred resources as mill feed, referred to as the Reserve Case, and which is set out in Appendix slides "QB2 Project Economics Comparison" and "QB2 Reserves and Resources Comparison".

The scientific and technical information regarding the QB2 project and Teck's other material properties was prepared under the supervision of Rodrigo Marinho, P. Geo, who is an employee of Teck. Mr. Marinho is a qualified person, as defined under National Instrument 43-101.

Second Quarter 2020 Highlights

- Continuing to operate responsibly and safely to support economic recovery
- Took steps to:
 - Further strengthen our financial position
 - Reduce costs; and
 - Position Teck to significantly improve margins towards the end of 2020 and early 2021, as we complete major capital projects
- Named to the Best 50 Corporate Citizens in Canada for the 14th consecutive year

Second Quarter 2020 Earnings

Impacted by COVID-19

	Q2 2020	Q2 2019
Revenue	\$ 1.7 billion	\$ 3.1 billion
Gross profit before depreciation and amortization ¹	\$ 453 million	\$ 1.4 billion
Gross profit	\$ 139 million	\$ 1.1 billion
EBITDA ¹	\$ 177 million	\$ 827 million
Adjusted EBITDA ¹	\$ 485 million	\$ 1.3 billion
Profit (loss) attributable to shareholders	\$ (149) million	\$ 231 million
Adjusted profit attributable to shareholders ¹	\$ 89 million	\$ 498 million
Adjusted basic earnings per share ¹	\$ 0.17/share	\$ 0.88/share
Adjusted diluted earnings per share ¹	\$ 0.17/share	\$ 0.87/share

Second Quarter 2020 Earnings & Adjusted Earnings

(C\$M)	Q2 2020	Q2 2019
Profit (loss) attributable to shareholders	\$ (149)	\$ 231
Add (deduct) on an after-tax basis:		
Asset impairment	-	109
COVID-19 costs	147	-
Environmental costs	69	25
Inventory write-downs (reversals)	38	9
Share-based compensation	17	7
Commodity derivatives losses (gains)	(20)	8
Debt prepayment option gain	-	(26)
Loss on debt redemption or purchase	8	166
Taxes and other	(21)	(31)
Adjusted profit attributable to shareholders ¹	\$ 89	\$ 498
Adjusted basic earnings per share ¹ (\$/share)	\$ 0.17	\$ 0.88
Adjusted diluted earnings per share ¹ (\$/share)	\$ 0.17	\$ 0.87

Key Updates: COVID-19 Impact on our Business

- All operations are currently producing
- Economic impacts of the pandemic have reduced demand and prices for our products
- Expensed \$260 million in COVID-19 costs in Q2 2020

Key Updates: Steelmaking Coal Business Update

- Focus on increasing margins, not volumes
- Q2 2020 sales were 5 million tonnes
- Shifting our cost base lower due to:
 - Declining strip ratio
 - Elkview plant expansion
 - Cardinal River closure
 - Cost Reduction Program
 - RACE21™

Key Updates: QB2 Update

- Construction ramping back up, with over 3,000 people currently on site
- Planning to continue a gradual ramp up of the construction workforce over the next three months towards the pre-suspension workforce level, as conditions allow
 - Expect to have ~4,000 people on site by the end of July and ~8,000 people on site by the end of October
- Aim to achieve overall project progress of close to 40% by year end

QB2 restarted port marine works.

Impact of the construction suspension on cost and schedule depends on length of the suspension and ramp up period

Key Updates: Neptune Facility Upgrade Progress

- Project remains in line with our previously announced capital estimate and schedule
- Five-month suspension of terminal operations began in May 2020
- Completion of construction expected in Q1 2021

The new double dumper barrels, staged at Neptune in July 2020.

Key Updates: Strong Financial Position

- Reduced near-term debt maturities and further strengthened liquidity by adding a US\$1 billion revolving credit facility
- Continue to focus on our cost reduction program
- Achieved significant reductions as at June 30, 2020:
 - ~\$250 million¹ in operating cost reductions
 - ~\$430 million¹ of capital cost reductions

Key Updates: Guidance Update

- Issued updated guidance for H2 2020
- Changed categories for capital expenditures guidance to sustaining capital, growth capital or capitalized stripping
- Nearing the end of the major capital deployment phase for Neptune and Active Water Treatment Facilities at Elkview and Fording River

Steelmaking Coal Business Unit

Q2 2020

- Sales were 5.0 Mt, despite steelmakers cutting production faster than during the Global Financial Crisis in 2008/09
- Adjusted site cash cost of sales¹ of \$68 per tonne reflects lower sales volumes
- Production averaged ~80% of plan due COVID-19

Looking Forward

- Expect 5.0-5.4 Mt of sales in Q3 2020
- Adjusted site cost of sales¹ are expected to decrease over the remainder of 2020 and to end the year <\$60 per tonne
- Production guidance for H2 2020 reflects the Neptune shutdown and estimated impacts of COVID-19

Updated Guidance	2019A	H1 2020A	H2 2020
Production (Mt)	25.7	10.0	11.0-12.0
Adjusted Site Cost of Sales ¹ (\$/t)	\$65	\$66	\$60-64
Transport Costs (\$/t)	\$39	\$41	\$39-42

Copper Business Unit

Q2 2020

- Production reflects temporary suspension of operations at Antamina, which ramped up to full production ahead of plan
- Highland Valley gradually ramped back up to full production rates
- Significantly lower total cash unit costs² reflect our cost reduction program and favourable exchange rates

Looking Forward

- All operations are currently at full production rates, which we expect to maintain through H2 2020
- Production guidance for H2 2020 reflects production plan changes at Highland Valley due to COVID-19
- COVID-19 costs are not expected to have a material impact on our cash unit costs² in H2 2020

Updated Guidance	2019A	H1 2020A	H2 2020
Production ¹ (kt)	297	130	145-160
Net Cash Unit Costs ² (US\$/lb)	\$1.39	\$1.31	\$1.20-1.30

QB2 Update

Construction activities partially suspended since mid-March

- Strict COVID-19 protocols in place to protect the health and safety of our workers and communities where we operate

Planning to continue a gradual ramp up of the construction workforce over the next three months, as conditions permit

- Initially focused on high value low density work
- Also continue to advance permitting, procurement, manufacturing and the transportation/delivery of materials

Ultimate cost and schedule impact will depend on the length of partial suspension & required protocols to manage COVID-19

- Assuming a staged ramp-up through Q3 2020, the aggregate estimated impact from the suspension is expected to be ~US\$260-290 million, excluding interest, with a schedule delay of ~5-6 months
- In addition, we expect to construct more camp space at an incremental cost of ~US\$25-40 million that would not have been required absent COVID-19
- Should ramp up be delayed, each additional month of partial suspension is expected to have an additional cost impact of ~US\$25-35 million and one month of additional schedule delay

Pipeline area, mountain sector right of way

Zinc Business Unit

Q2 2020

- Lower Red Dog production due to maintenance challenges and lower grades
- Red Dog zinc sales of 93 kt, in line with seasonality
- Lower net cash unit costs²
- Trail's zinc production impacted by annual zinc roaster maintenance

Looking Forward

- Expect Red Dog zinc in concentrate sales of 160-180 kt in Q3 2020, reflecting normal seasonality
- Start of Red Dog shipping season delayed; still expect to ship all of its production during the shipping season
- Red Dog expected to return to full production rate in Q3 2020; site water levels may restrict access to high grade ore in H2 2020
- COVID-19 costs are not expected to have a material impact on our cash unit costs² in H2 2020

Updated Guidance	2019A	H1 2020A	H2 2020
Production, Mined Zinc ¹ (kt)	640	248	315-345
Production, Refined Zinc (kt)	287	149	155-165
Net Cash Unit Costs ² (US\$/lb)	\$0.34	\$0.44	\$0.40-0.50

Energy Business Unit

Q2 2020

- Fort Hills Partners safely and efficiently reduced operations to a single train facility in Q2 2020, which helped reduce negative cash flows in light of COVID-19 and unprecedented low Western Canadian Select prices
- Inventory write-down of \$23 million
 - Adjusted operating costs² are low because of inventory write-downs, which are adjusted out
- Production negatively impacted by flooding due to extreme wet weather in June and early July

Looking Forward

- Guidance for production, operating costs and capital spending unchanged from disclosure in Q1 2020
- The partners may further adjust the operating plan

Updated Guidance	2019A	H1 2020A	H2 2020
Production, Bitumen ¹ (M barrels)	12.3	4.6	3.4-4.4
Adjusted Operating Costs ² (C\$/barrel bitumen)	\$29.24	\$29.54	\$37-40

Cash Flow

Cash Changes in Q2 2020 (\$M)

COVID-19 Expenditures

- Costs related to capital projects that do not qualify for capitalization are expensed as incurred in **other operating income (expense)**
- Costs not directly related to production are expensed as incurred in **cost of sales**; excluded in inventory costing
- Borrowing costs on capital projects that are temporarily suspended are charged against **finance expense**, as they are not allowed to be capitalized

COVID-19 Expenditures

\$260 million in Q2 2020

\$304 million in H1 2020

Cost Reduction Program (CRP)

- Achieved significant total reductions to June 30, 2020:
 - **~\$250 million¹** in operating cost reductions
 - **~\$430 million¹** in capital cost reductions
- Our cost reduction program has been included in our guidance since Q3 2019
- No change to previous target of **~\$1 billion¹**
- Reductions are from expected spending contemplated as at June 30th, 2019

Strong Financial Position

Further Strengthened Liquidity

- C\$6.9 billion of liquidity¹ as at July 22, 2020, including \$430 million in cash
- US\$5.0 billion available through two committed revolving credit facilities
 - US\$4.0 billion maturing November 2024 and new US\$1.0 billion maturing June 2022
 - US\$4.8 billion available as at July 22, 2020
 - Neither facility has a cash-flow based financial covenant, credit rating trigger, or general material adverse effect borrowing condition clause

Executing our Prudent QB2 Funding and Financing Plan

- US\$2.5 billion QB2 project finance facility; US\$563 million drawn as at July 22, 2020
- No contributions to project capital from Teck expected until the first half of 2021

Maintaining Investment Grade Credit Ratings

Reduced Near-Term Debt Maturities

- Issued US\$550 million of 3.9% 10-year senior unsecured notes
- Purchased US\$268 million of 2021, 2022 and 2023 Notes and paid down our US\$4 billion credit facility
- The combination of these items is leverage neutral

Note Maturity Profile as at June 30, 2020 (C\$M)

Summary

- Quality operating assets in stable jurisdictions
- Copper growth strategy - funded and being implemented
- Continuing to advance our key priorities to generate long term value for shareholders:
 1. QB2 Project
 2. Neptune Facility Upgrade
 3. RACE21™
 4. Cost Reduction Program

Significant potential Teck share price upside

Appendix

Slide 5: Second Quarter 2020 Earnings

1. Gross profit before depreciation and amortization, EBITDA, adjusted EBITDA, adjusted profit attributable to shareholders, adjusted basic earnings per share and adjusted diluted earnings per share are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 6: Second Quarter 2020 Earnings & Adjusted Earnings

1. Adjusted profit attributable to shareholders, adjusted basic earnings per shares, and adjusted diluted earnings per share are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 11: Key Updates: Strong Financial Position

1. Our cost reduction program was launched at the beginning of Q4 2019 and is scheduled to end on December 31, 2020. Cost reductions are expressed as reductions from planned spending as at June 2019.

Slide 13: Steelmaking Coal Business Unit

1. Steelmaking coal unit costs are reported in Canadian dollars per tonne. Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 14: Copper Business Unit

1. Metal contained in concentrate. We include 100% of production and sales from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes even though we do not own 100% of these operations because we fully consolidate their results in our financial statements. We include 22.5% of production and sales from Antamina, representing our proportionate ownership interest. Copper production includes cathode production at Quebrada Blanca and Carmen de Andacollo.
2. Copper unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Copper total cash costs include adjusted cash cost of sales and smelter processing charges. Copper net cash costs include adjusted cash cost of sales and smelter processing charges, less cash margins for by-products including co-products. Guidance for H2 2019 assumes a zinc price of US\$0.93 per pound, a molybdenum price of US\$8 per pound, a silver price of US\$17 per ounce, a gold price of US\$1,725 per ounce and a Canadian/U.S. dollar exchange rate of \$1.36. Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 16: Zinc Business Unit

1. Metal contained in concentrate. We include 22.5% of production and sales from Antamina, representing our proportionate ownership interest. Total zinc production includes co-product zinc production from our Copper business unit.
2. Zinc unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Zinc net cash costs are mine costs including adjusted cash cost of sales and smelter processing charges, less cash margins for by-products. Guidance for H2 2019 assumes a lead price of US\$0.82 per pound, a silver price of US\$17 per ounce and a Canadian/U.S. dollar exchange rate of \$1.36. By-products include both by-products and co-products.] Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 17: Energy Business Unit

1. We include 21.3% of production from Fort Hills, representing our proportionate ownership interest.
2. Bitumen unit costs are reported in Canadian dollars per barrel. Adjusted operating costs represent costs for the Fort Hills mining and processing operations and do not include the cost of diluent, transportation, storage and blending. Inventory write-downs of \$23 million (\$13.73 per bitumen barrel sold) in the second quarter are excluded from adjusted operating costs but are included in gross profit so adjusted operating costs are low as a result. For the six months ended June 30, 2020, we recorded inventory write-downs of \$46 million (\$9.28 per bitumen barrel sold). Including inventory write-downs recorded in the first two quarters, our site production costs are within our previously issued annual guidance of C\$37 to C\$40 per barrel. Non-GAAP financial measure. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 20: Cost Reduction Program (CRP)

1. Our cost reduction program was launched at the beginning of Q4 2019 and is scheduled to end on December 31, 2020. Cost reductions are expressed as reductions from planned spending as at June 2019.

Slide 21: Strong Financial Position

1. As at June 22, 2020.

COVID-19 Response

COVID-19 Response: Five Pillar Approach

Prevention

Employee
Support

Communities &
Public Health

Business
Continuity

Communication

- Nothing is more important than the **health and the safety of our employees, contractors and the communities** where we operate
- **Following the most up-to-date direction** from governments and public health authorities
- **Implementing extensive measures** across our operations to prevent transmission, providing support to employees and local communities, and maintaining operations to the extent possible
- With our **strong balance sheet**, we are well positioned to weather the effects of the pandemic

Supporting Global and Community Priorities

\$20-million fund to support COVID-19 response building on our existing programs

COVID-19 Support

Supporting healthcare
providers and infection
control

Supporting international relief
and regional organizations to
protect food security

Support for women,
Indigenous peoples, other
vulnerable groups

Existing Teck Programs

Teck's Copper &
Health Program

Teck's Zinc &
Health Program

UN Women
Partnership

COVID-19 Response

Prevention and Employee Support

Prevention

- **Remote work** implemented where feasible
- **Reduced on-site crews** at sites to support physical distancing
- **Comprehensive measures** at all sites:
 - Enhanced cleaning / disinfecting protocols
 - Physical distancing – no large group meetings; reduced occupancy on buses
 - Rapid symptom response protocol
 - Promoting preventative measures like frequent handwashing

Employee Support

- **Detailed internal protocols and resources:** mandatory declaration for visitors, Take 5 survey, COVID-19 Response Protocol, Contact Tracing Form
- **Maintaining employment**, paid time off during temporary slowdown and offering extended short-term disability benefit
- **Providing access to health care resources:** Employee and Family Assistance Programs and on-demand virtual health care systems
- **“Stopping the Spread. It Starts with Me”** employee culture campaign for prevention

COVID-19 Response

Communities & Public Health; Business Continuity

Communities & Public Health

- **\$20 million COVID-19 support fund** launched, including **Teck Community Response Fund**
- **One million masks** in B.C. and support for healthcare services in Chile

Communication

- Providing **regular timely communication, early and often**, as new information presents itself
- **Addressing employee concerns**, including advice on staying safe and healthy

Business Continuity

- All Teck operated sites **continue to operate** with strong prevention protocols in place
- **Increased cost reduction target** to \$1.0 billion of previously planned spending through the end of 2020
- Suspended previous 2020 guidance
- **Close collaboration** with unions, e.g.: United Steelworkers
- Temporarily suspended construction activities at QB2; temporarily suspended operation at Antamina mine, restarted May 27, 2020

COVID-19 Response In Steelmaking Coal

Take 5 / To Limit the Spread

Completed Inspections

45,000+

Pass Rate

97.9%

Issues Resolved

780

Type of Audits

- “Take 5” symptom screening (32,000+)
- Facility cleaning and disinfecting log audits (9,197)
- General COVID-19 control verification, i.e. worker interview (1,464)
- Transportation inspection (1,904)
- Close proximity work (378)

Auditors

- Health & Safety Team
- Supervisors
- Joint Safety Committees
- Trainers

Audit Locations

- At Gate - Prior to Entry
- Lunchrooms
- Dry's
- Light Vehicles
- Buses
- In Field Activities

**COVID-19 control interviews being completed
with workers around sites during their shift**

COVID-19 Response In Steelmaking Coal (cont.)

Take 5 / To Limit the Spread

Audit Process

- “Take 5” symptom screening completed during shift exchange
- Sites have implemented thermal screening at high traffic entrance points
- Sites continue to track audits and identify areas for improvement.

Top Responses for “What is Working Around COVID-19 Controls?”

- COVID-19 awareness and communication with workers
- Cleaning and disinfecting
- Completing frequent auditing on all protocols
- Access to personal protective equipment (PPE) and disinfecting supplies

Coal Response Update

- No confirmed cases across Teck Coal
- Teck Coal COVID-19 Next Steps Strategy in development
- Take home packages for employees
- Busing Ventilation Evaluation completed for COVID-19 engineering control
- Continuing to complete control effectiveness reviews:
 - Pre-screening (“Take 5”)
 - Physical Distancing
 - Cleaning & Disinfecting
 - Transportation
 - Response Protocols

Grinding Area

QB2 Value Creation

Delivers on Copper Growth Strategy

- Rebalances Teck's portfolio over time to make the contribution from copper equal to or greater than steelmaking coal
- World class, low cost copper opportunity in an excellent geopolitical jurisdiction
- First production expected in H2 2022
- Large, long life deposit with expansion potential (QB3)
- QB2 partnership and financing plan dramatically reduces Teck's capital requirements

QB2 Capital Estimate Updated April 1, 2020

Capital cost does not include impact of COVID-19

- Engineering, Contract Formation and Procurement approaching 100% and in close out
- Includes actual contract and purchase order pricing
- Majority of construction permits secured
- Visibility on contractor productivity

Current Estimate¹

Capital Cost (inc. escalation)

US\$5.2B

To-go April 1, 2020

US\$3.9B

Exchange Rate

775 CLP:USD

Contingency (included)

~US\$400M

QB2 Project

Executing on a world class development asset

Highlights

- ✓ Vast, long life deposit in favourable jurisdiction
- ✓ Very low strip ratio
- ✓ Low all in sustaining costs (AISC)¹
- ✓ Potential to be a top 20 producer
- ✓ High grade, clean concentrates
- ✓ Significant brownfield development
- ✓ Community agreements in place and strong local relationships
- ✓ Fully sanctioned and construction well underway
- ✓ Expansion potential (QB3) with potential to be a top 5 producer

Location

QB2 Rebalances Teck's Portfolio

Delivers on copper growth strategy

- Rebalances Teck's portfolio over time to make the contribution from copper similar to steelmaking coal
- On a consolidated basis copper production is doubled
- On an attributable basis copper production increases by ~60%
- Based on expected long term prices for copper and steelmaking coal, increased copper production could reduce steelmaking coal to below 50% of EBITDA³ over time
- QB3 and other copper development projects could further increase copper exposure and diversification

Teck's Annual Copper Production (kt Cu)

Based on Sanction Case (Including 199 Mt Inferred Resources)

Refer to "QB2 Project Economics Comparison" and "QB2 Reserves and Resources Comparison" slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

QB2's Competitive Cost Position

Competitive Operating Cost & Capital Intensity

- Given the exceptionally low strip ratio, consistent grade profile, compact site layout, and high level of automation, QB2 is expected to have attractive and relatively stable operating costs
- Exceptional strip ratio of 0.70 LOM, meaning for every one tonne of ore mined, only 0.70 tonnes of waste need to be mined (0.44 over first 5 full years)
 - Compares to other world class asset strip ratios of 3.5 for Antamina, 3.1 for Collahuasi, and 2.5 for Escondida¹
 - Major benefit to sustaining capital since it reduces mobile fleet size and replacement costs

Low Cash Cost Position

C1 Cash Cost² & AISC³ Curve¹ (US\$/lb, 2023E)

Based on Sanction Case (Including 199 Mt Inferred Resources)

Refer to “QB2 Project Economics Comparison” and “QB2 Reserves and Resources Comparison” slides for Reserve Case (Excluding Inferred Resources)

The description of the QB2 project Sanction Case includes inferred resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves. Inferred resources are subject to greater uncertainty than measured or indicated resources and it cannot be assumed that they will be successfully upgraded to measured and indicated through further drilling.

Vast, Long Life Deposit at Quebrada Blanca

QB2 Uses Only ~20% of R&R¹

- Resources exclusive of Reserves increased 55% from 2017 to the 2019 Reserves and Resources Tonnage¹
- Initial 28 year mine life processes ~20% of the 2019 Reserve and Resource Tonnage¹
- Deposit is capable of supporting a very long mine life based on throughput rate of 143 ktpd by utilizing further tailings capacity at already identified sites
- Actively evaluating potential options to exploit value of full resource through mill expansion and / or mine life extension
- Beyond the extensive upside included in the defined QB deposit, the district geology is highly prospective for exploration discovery and resource addition. Mineralization is open in multiple directions

Extension Potential

Reserve and Resource Tonnage (Mt)

ENAMI Interest in Quebrada Blanca

- The government of Chile owns a 10% non-funding interest in Compañía Minera Teck Quebrada Blanca S.A. (CMTQB) through its state-run minerals company, Empresa Nacional de Minería (ENAMI)
- ENAMI has been a partner at QB since 1989 and is a 10% shareholder of Carmen de Andacollo
- ENAMI is not required to fund QB2 development costs
- Project equity funding in form of:
 - 25% Series A Shares
 - 75% Shareholder Loans
- Until shareholder loans are fully repaid, ENAMI is entitled to a minimum dividend, based on net income, that approximates 2.0-2.5% of free cash flow
 - Thereafter, ENAMI receives 10% of dividends / free cash flow
- ENAMI is entitled to board representation

Organizational Chart

Quebrada Blanca Accounting Treatment

Balance Sheet

- 100% of project spending included in property, plant and equipment
- Debt includes 100% of project financing
- Total shareholder funding to be split between loans and equity approximately 75%/25% over the life of the project
- Sumitomo (SMM/SC)¹ contributions will be shown as advances as a non-current liability and non-controlling interest as part of equity
- Teck contributions, whether debt or equity eliminated on consolidation

Income Statement

- Teck's income statement will include 100% of QB's revenues and expenses
- Sumitomo's¹ 30% and ENAMI's 10% share of profit will show as profit attributable to non-controlling interests

Cash Flow

- 100% of project spending included in capital expenditures
- In 2019, Sumitomo¹ contribution recorded within financing activities and split approximately 50%/50% as:
 - Loans recorded as “Advances from Sumitomo”
 - Equity recorded as “Sumitomo Share Subscriptions”
- 100% of draws on project financing included in financing activities
- After start-up of operations
 - 100% of profit in cash flow from operations
 - Sumitomo's¹ 30% and ENAMI's 10% share of distributions included in non-controlling interest

Notes - Appendix: Quebrada Blanca

Slide 34: QB2 Capital Estimate Updated April 1, 2020

1. On a 100% go forward basis from January 1, 2019 including escalation and excluding working capital or interest during construction using actual realized exchange rates until March 30, 2020 and assuming a CLP/USD exchange rate of 775 from April 1, 2020. To Go Capital is expressed from April 1, 2020. Includes approximately US\$400 million in contingency. First production based on a P80 project schedule.

Slide 37: QB2 Project

1. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures which do not have a standardized meanings prescribed by International Financial Reporting Standards (IFRS) or Generally Accepted Accounting Principles in the United States. These measures may differ from those used by other issuers and may not be comparable to such measures as reported by others. These measures are meant to provide further information about our financial expectations to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS. For more information on our calculation of non-GAAP financial measures please see our Management's Discussion and Analysis for the year ended December 31, 2018, which can be found under our profile on SEDAR at www.sedar.com.

Slide 38: QB2 Rebalances Teck's Portfolio

1. We include 100% of the production and sales from QB and Carmen de Andacollo mines in our production and sales volumes because we fully consolidate their results in our financial statements. We include 22.5% of production and sales from Antamina, representing our proportionate equity interest in Antamina. Copper production includes cathode production at QB.
2. Based on QB2 Sanction Case first five full years of copper production.
3. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

Slide 39: QB2's Competitive Cost Position

1. Source: Wood Mackenzie.
2. C1 cash costs (also known as net cash unit costs) are presented after by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
3. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

Slide 40: Vast, Long Life Deposit at Quebrada Blanca

1. Resources figures as at November 30, 2018. Resources are reported separately from, and do not include that portion of resources classified as reserves. See "QB2 Reserves and Resources Comparison" slide for further details.
2. Based on sanction case mine plan tonnage.

Slide 41: QB2 Project Economics Comparison

1. Based on go-forward cash flow from January 1, 2017. Based on all equity funding structure.
2. Based on go-forward cash flow from January 1, 2019. Based on optimized funding structure.
3. Life of Mine annual average figures exclude the first and last partial years of operations.
4. C1 cash costs are presented after by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs are consistent with C1 cash costs. C1 cash costs for QB2 include stripping costs during operations. Net cash unit costs and C1 cash costs are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.
5. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

Notes - Appendix: Quebrada Blanca

Slide 42: QB2 Reserves and Resources Comparison

1. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US\$13.39/t over the planned life of mine. The life-of-mine strip ratio is 0.41.
2. Both mineral resource and mineral reserve estimates assume long-term commodity prices of US\$3.00/lb Cu, US\$9.40/lb Mo and US\$18.00/oz Ag and other assumptions that include: pit slope angles of 30–44°, variable metallurgical recoveries that average approximately 91% for Cu and 74% for Mo and operational costs supported by the Feasibility Study as revised and updated.
3. Mineral resources are reported using a NSR cut-off of US\$11.00/t and include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.
4. Mineral reserves are constrained within an optimized pit shell and scheduled using a variable grade cut-off approach based on NSR cut-off US\$18.95/t over the planned life of mine. The life-of-mine strip ratio is 0.70.
5. Mineral resources are reported using a NSR cut-off of US\$11.00/t outside of the reserves pit. Mineral resources include inferred resources within the reserves pit at a US\$ 18.95/t NSR cut-off and also include 23.8 million tonnes of hypogene material grading 0.54% copper that has been mined and stockpiled during existing supergene operations.

Slide 43: ENAMI Interest in Quebrada Blanca

1. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

Slide 44: Quebrada Blanca Accounting Treatment

1. Sumitomo Metal Mining Co. Ltd. and Sumitomo Corporation are collectively referred to as Sumitomo.

Strategy and Overview

Consistent Long-Term Strategy

- Diversification
- Long life assets
- Low cost
- Appropriate scale
- Low risk jurisdictions

Attractive Portfolio of Long-Life Assets

Low risk jurisdictions

Operations & Major Projects:

North America

Steelmaking Coal

- 1 Fording River
- Greenhills
- Line Creek
- Elkview

Copper

2019 Revenue by Business Unit

2019 Gross Profit¹ by Business Unit
(Before depreciation and amortization)

2019 Revenue by Commodity

Customer Base

Quality Operating Assets in Stable Jurisdictions

STEELMAKING COAL Elk Valley Mines

- Long life
- High quality steelmaking coal
- Low carbon intensity
- ~\$27 billion of Adjusted EBITDA since the Fording acquisition¹
- Focus on increasing margins

ZINC Red Dog

- Long life
- Bottom quartile of cost curve
- Strong market position
- Significant mine life extension potential at Aktigirug

COPPER Antamina, Highland Valley, Carmen de Andacollo

- Long life
- Competitive cost
- Low carbon intensity
- Strong growth through QB2

ENERGY Fort Hills

- Long life
- Higher quality, lower carbon intensity product
- Low operating costs expected at full production
- Future debottlenecking opportunities of 10-20%

Foundation on health and safety and sustainability leadership

Long-Term Strategy: Copper Growth from Steelmaking Coal and Zinc

We are implementing a copper growth strategy, financed by strong cash flows from steelmaking coal and zinc

COPPER

- Building QB2: long-life, low-cost operation with major expansion potential
- Strong base of existing copper operations
- Growth aligned with rising global demand for copper driven by low-carbon shift

STEELMAKING COAL

- Strong long-term cash flow
- Growing margins, not volume
- One of the lowest carbon intensities in the world

ZINC

- Maximizing value from Red Dog, one of the highest grade zinc mines in the world

Our Key Priorities

- **QB2** is a long-life, low-cost operation with significant expansion potential
- Rebalances our portfolio over time
- QB has potential to become a top five global copper producer

- Our **Neptune facility upgrade** secures a long term, low cost and reliable supply chain for our steelmaking coal business
- Helps us deliver on our commitments to shareholders and customers

- **RACE21™** is our innovation-driven business transformation program
- Significant value potential

- Company-wide **cost reduction program** underway
- Achieved ~\$250 million¹ in operating cost and ~\$430 million¹ in capital cost reductions to June 30, 2020

Focus on health and safety and sustainability leadership

Diverse Pipeline of Growth Options

	In Construction	Medium-Term Growth Options	Future Options
Copper Strong platform with substantial growth options	QB2	QB3	Galore Creek
		Zafranal	Schaft Creek
		HVC Brownfield	Mesaba
		NuevaUnión	
		San Nicolás (Cu-Zn)	
Zinc Premier resource with integrated assets	Red Dog VIP2 Project	Antamina Brownfield	Teena
		Red Dog Satellite Deposits	Cirque
Steelmaking Coal Well established with capital efficient value options	Neptune Terminals Expansion		Quintette/Mt. Duke
			Coal Mountain 2
			Elk Valley Brownfield
Energy Through partnership		Fort Hills Debottlenecking & Expansion	Frontier
			Lease 421

Disciplined Approach to M&A

Total net proceeds of C\$3.1B:

- Balance sheet strengthened by divestment of non-core assets at high EBITDA⁸ multiples
- Modest 'prudent housekeeping' acquisitions to consolidate control of attractive copper and zinc development assets
- Innovative NuevaUnión joint venture to create world scale development opportunity

Capital Allocation Framework

1. For this purpose, we define available cash flow as cash flow from operating activities after interest and finance charges, lease payments and distributions to non-controlling interests less: (i) sustaining capital and capitalized stripping; (ii) committed enhancement and growth capital; (iii) any cash required to adjust the capital structure to maintain solid investment grade credit metrics; and (iv) our base \$0.20 per share annual dividend. Proceeds from any asset sales may also be used to supplement available cash flow. Any additional cash returns will be made through share repurchases and/or supplemental dividends depending on market conditions at the relevant time.

Strong Track Record of Returning Cash to Shareholders

~\$6.8 billion returned from January 1, 2003 to June 30, 2020

Dividends

- \$4.4 billion since 2003, representing ~32% of free cash flow¹

Share Buybacks

- \$2.3 billion since 2003, representing ~17% of free cash flow¹

Tax-Efficient Earnings in Canada

~C\$3.4 billion in available tax pools at December 31, 2019

- Includes:
 - \$2.6 billion in net operating loss carryforwards
 - \$0.5 billion in Canadian Development Expenses (30% declining balance p.a.)
 - \$0.3 billion in allowable capital loss carryforwards
- Applies to cash income taxes in Canada
- Does not apply to:
 - Resource taxes in Canada
 - Cash taxes in foreign jurisdictions

Notes: Appendix – Strategy and Overview

Slide 50: Global Customer Base

1. Gross profit before depreciation and amortization is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

Slide 51: Quality Operating Assets in Stable Jurisdictions

1. Adjusted EBTIDA generated from October 1, 2008 to June 30, 2020. This reflects the change in accounting policy to capitalize stripping from January 1, 2013. Waste rock stripping costs incurred in the production phase of a surface mine are recorded as capitalized production stripping costs within property, plant and equipment when it is probable that the stripping activity will improve access to the orebody when the component of the orebody or pit to which access has been improved can be identified, and when the costs relating to the stripping activity can be measured reliably. When the actual waste-to-ore stripping ratio in a period is greater than the expected life-of-component waste-to-ore stripping ratio for that component, the excess is recorded as capitalized production stripping costs. Adjusted EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 53: Our Key Priorities

1. Our cost reduction program was launched at the beginning of Q4 2019 and is scheduled to end on December 31, 2020. Cost reductions are expressed as reductions from planned spending as at June 2019.

Slide 55: Disciplined Approach to M&A

1. Carmen de Andacollo gold stream transaction occurred in USD at US\$162 million.
2. Antamina silver stream transaction occurred in USD at US\$610 million.
3. Sandstorm royalty transaction occurred in USD at US\$22 million.
4. Teena transaction occurred in AUD at A\$10.6 million.
5. San Nicolás transaction occurred in USD at US\$50 million.
6. Waneta Dam transaction closed July 26, 2018 for C\$1.2 billion.
7. QB2 Partnership (sale of 30% interest of project to Sumitomo; SMM and SC) for total consideration of US\$1.2 billion, including US\$800 million earn-in and US\$400 million matching contribution; converted at FX of 1.34 on March 29, 2019.
8. EBITDA is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

Slide 56: Production Guidance

1. As at July 22, 2020. See Teck's Q2 2020 press release for further details.
2. Metal contained in concentrate.
3. We include 100% of production and sales from our Quebrada Blanca and Carmen de Andacollo mines in our production and sales volumes, even though we do not own 100% of these operations, because we fully consolidate their results in our financial statements. We include 22.5% and 21.3% of production and sales from Antamina and Fort Hills, respectively, representing our proportionate ownership interest in these operations.
4. Copper production includes cathode production at Quebrada Blanca and Carmen de Andacollo.
5. Total zinc includes co-product zinc production from our 22.5% proportionate interest in Antamina.
6. Excludes production from QB2 for three-year guidance 2021–2023.
7. The 2021–2023 bitumen production guidance is unchanged from previously issued guidance and assumes that Fort Hills is fully operational. At this time, Fort Hills is operating as a one-train facility with reduced production. If this continues beyond 2020, the three-year production guidance will be lower than noted above.

Slide 57: Sales and Unit Cost Guidance

1. As at July 22, 2020. See Teck's Q2 2020 press release for further details.
2. Steelmaking coal unit costs are reported in Canadian dollars per tonne.
3. Copper unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Copper net cash unit costs include adjusted cash cost of sales and smelter processing charges, less cash margins for by-products including co-products. Guidance for H2 2020 assumes a zinc price of US\$0.93 per pound, a molybdenum price of US\$8 per pound, a silver price of US\$17 per ounce, a gold price of US\$1,725 per ounce and a Canadian/U.S. dollar exchange rate of \$1.36.
4. After co and by-product margins.
5. Zinc unit costs are reported in U.S. dollars per payable pound of metal contained in concentrate. Zinc net cash unit costs are mine costs including adjusted cash cost of sales and smelter processing charges, less cash margins for by-products. Guidance for H2 2020 assumes a lead price of US\$0.82 per pound, a silver price of US\$17 per ounce and a Canadian/U.S. dollar exchange rate of \$1.36. By-products include both by-products and co-products.
6. Non-GAAP Financial Measure. See "Use of Non-GAAP Financial Measures" section for further information.

Notes: Appendix – Strategy and Overview

Slide 58: Capital Expenditures Guidance

1. As at July 22, 2020. See Q2 2020 press release for further information.
2. Steelmaking coal sustaining capital guidance includes \$305 million of water treatment capital.
3. RACE21™ capital expenditures for 2020 include \$50 million relating to steelmaking coal, \$5 million relating to copper, \$5 million relating to zinc and the remainder relating to corporate projects. We also expect to spend approximately \$130 million on RACE21™ for research and innovation expenses and intangible assets in 2020.
4. Copper growth guidance for 2020 includes studies for QB3, Zafranal, San Nicolás and Galore Creek.
5. Total SMM and SC contributions were \$1.7 billion.

Slide 59: Commodity Price Leverage

1. As at July 22, 2020. The sensitivity of our annual profit attributable to shareholders and EBITDA to changes in the Canadian/U.S. dollar exchange rate and commodity prices, before pricing adjustments, based on our current balance sheet, our reinstated 2020 mid-range production estimates, current commodity prices and a Canadian/U.S. dollar exchange rate of \$1.35. See Teck's Q2 2020 press release for additional information.
2. All production estimates are subject to change based on market and operating conditions.
3. The effect on our profit attributable to shareholders and on EBITDA of commodity price and exchange rate movements will vary from quarter to quarter depending on sales volumes. Our estimate of the sensitivity of profit and EBITDA to changes in the U.S. dollar exchange rate is sensitive to commodity price assumptions.
4. Zinc includes 310,000 tonnes of refined zinc and 580,000 tonnes of zinc contained in concentrate.
5. Bitumen volumes from our energy business unit. Volumes are based on Fort Hills' current production levels of approximately 90,000 barrels per day (19,000 Teck's share), and not based on 2020 mid-range production estimates of 8 to 9 million barrels of bitumen.

Slide 61: Strong Track Record of Returning Cash to Shareholders

1. From January 1, 2003 to June 30, 2020. Free cash flow is a non-GAAP financial measure. See "Non-GAAP Financial Measures" slides.

Sustainability

Teck

Sustainability Leadership

Teck's Performance on Top ESG Ratings

- **"A" rating since 2013**
(scale of CCC – AAA)
- Outperforming 4 of our largest 5 industry peers

- **Top ranked diversified metals mining company**
- Highest industry rank in carbon, community relations, and ethics

- **Top-ranked mining company 2019 World & North American Indices**
- In the index for 10 consecutive years

- **ICMM member company**
- Aligning with enhanced Mining Principles

- The only mining company included

Focus on Sustainability Leadership

Ambitious Sustainability Goals in Eight Strategic Themes

Health and Safety

Climate Change

Responsible Production

Our People

Water

Tailings Management

Communities and
Indigenous Peoples

Biodiversity and
Reclamation

Sustainability Leadership

Aligned with Leading External Standards and Practices

Health and Safety

2019 Performance

- **85% of employees trained in new hazard identification program** against a target of 50%
- Safety performance in 2019
 - **16% reduction** in High-Potential Incidents
 - **18% decrease** in Lost-Time Disabling Injury Frequency
- One fatality at Quebrada Blanca Phase 2 project: **carried out in-depth investigation** to learn as much as possible and implement measures to **prevent a reoccurrence**

Incident Frequency (per 200,000 hours worked)

31% reduction in High-Potential Incident Frequency rate over past four years

Climate Action

Positioning for Low-Carbon Economy

Well positioned for a
Low-Carbon Economy

Among **lowest GHG intensity miners** globally on a copper-equivalent basis

GHG intensity for steelmaking coal and copper production among lowest in industry

Carbon pricing already built into majority of business

Scope 1+2 emissions per copper equivalent ranking¹
(tCO₂e/t CuEq, 2017)

Climate Action

Key Activities for Short-Term Goals

Reduce the carbon intensity of our operations by

33% by 2030

Investing in lower-carbon means of transportation such as electric haul trucks, conveyors and other approaches

Procure **50%** of our electricity demands in Chile from **clean energy by 2025** and **100%** by 2030

Power purchase agreement for QB2 in Chile will enable the transition to renewable energy for approximately half the power required for operations

Accelerate the adoption of **zero-emissions alternatives for transportation** by displacing the equivalent of **1,000** internal combustion engine (ICE) vehicles **by 2025**

Electric bus pilot project represents the first use of electric passenger buses for employee transport in the Canadian mining industry

Climate Action

Path to Carbon Neutrality

Prioritize Opportunities and Deliver Cost Competitive Reductions

Climate Action

Cleaner, Safer Vehicles Initiative

- 27 of the world's leading mining companies and OEMs collaborating in a non-competitive space via ICMM
- Accelerating the development of a new generation of mining vehicles with less:
 - GHG emissions
 - Diesel particulate matter
 - Chance of collisions
- Developing energy profiles for a range of haul routes to inform zero-emission alternatives for material movement

Water Management

Long Term Strategic Priorities and Goals

Implement innovative water management and water treatment solutions to protect water quality downstream of all our operations.

Transition to seawater or low-quality water sources for all operations in water-scarce regions by 2040.

Water Quality in the Elk Valley

Advancing Innovative Technologies

Elk Valley Water Quality Plan developed with government, Indigenous Peoples and communities to address water quality challenges

Saturated Rock Fill

Tank-Based Plants

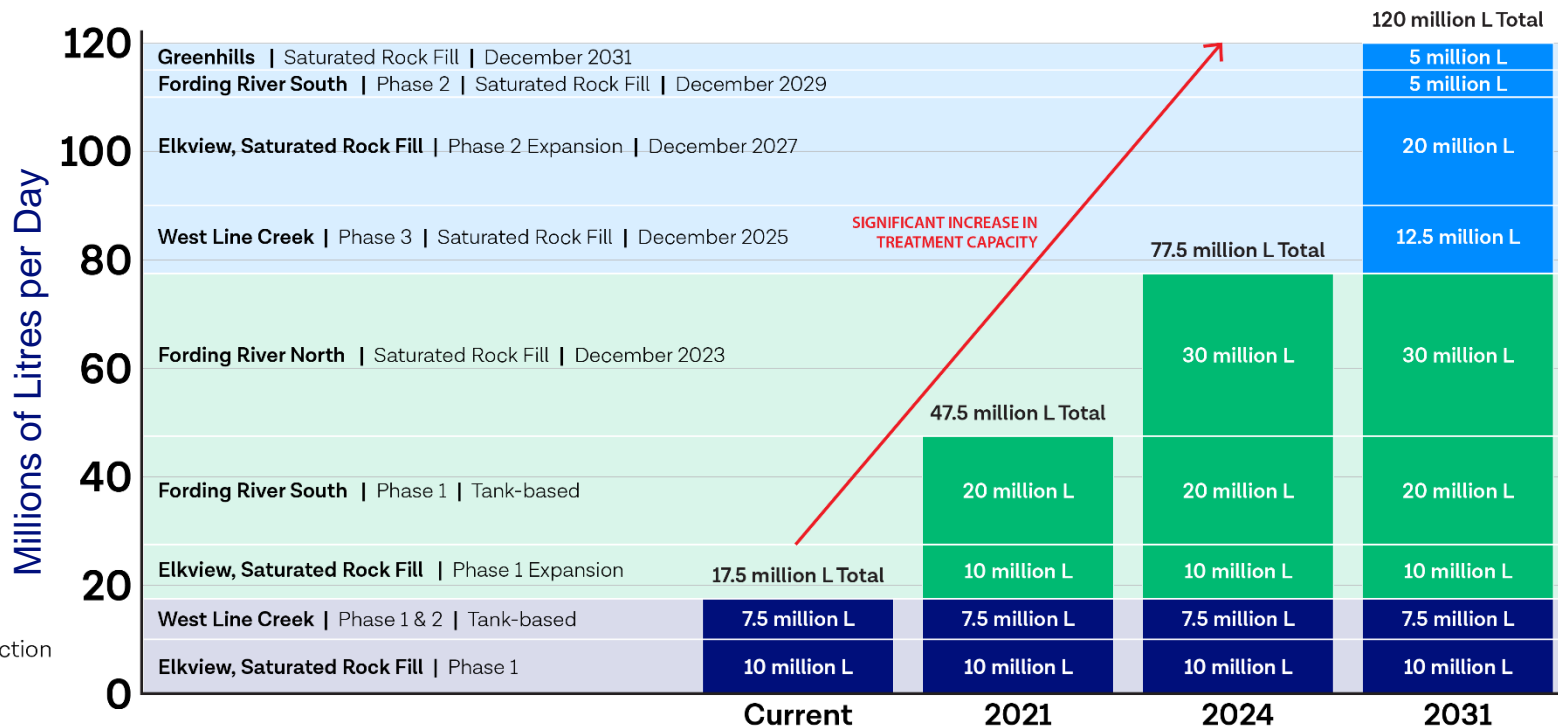

Nitrate Reduction

Elk Valley Water Treatment

Clear Path Forward for Improving Water Quality

Total investment in water treatment of \$640 to \$690 million¹ from 2020-2024

Tailings Management

Our Approach

- Management and emergency response aligned with ***Towards Sustainable Mining Protocols***
- **Dam Safety Inspection reports and special review by external experts** confirmed no immediate or emerging issues
- Planning underway to fully implement the new **Global Tailings Standard**

Teck has comprehensive systems and procedures in place based on **6 levels of protection**:

Further Strengthening Tailings Safety and Security

1. Special review by external experts

- Confirmed no immediate or emerging issues that could result in failure
- Confirmed Teck tailings management practices industry leading

2. Supporting industry-wide improvements

- ICMM-UN-PRI Global Tailings Review

3. Enhanced transparency & disclosure

- Facilities inventory posted
- Detailed response to the tailings facility enquiry from the Church of England and the Swedish Council on Ethics for the AP Funds

Tailings Safety and Security at Teck

Overview

Tailings are a common by-product of the mining process. They are typically created as mixed ore is crushed and processed to separate the valuable minerals from a saleable concentrate product. The waste from this process is called tailings. Due to the nature of the ore processing, tailings are commonly in the form of a mineral particles and water. Management of tailings storage in a specially-designed impoundment, called a facility.

Tailings facilities are historically well-managed with few incidents; however, there have been incidents where we know that a tailings incident has the potential to have a significant impact on communities, local and the surrounding environment. As such, we take measures during planning, design, construction, and decommissioning of our tailings facilities to confine

• Structures are stable
• Solids and water are managed within designated areas
• Facilities comply with regulatory requirements
• Facilities conform to applicable standards, internal industry best practices and the technical guidelines jurisdictions in which we operate

Tailings Facility Construction

Tailings facilities can follow a number of designs, factors including the composition of the tailings is geotechnical considerations, precipitation, seismicity, community preference, and environmental protection. Teck's operations are examples of numerous types of facilities, including facilities for storing desludged tailings at our steelmaking coal operations and utilizing existing mined-out pits. The most common tailings impoundment at Teck and across the mine is created by constructing a dam (or dams) in conjunction with topography to create a tailings storage facility.

There are several primary methods of constructing dams. The specific construction method, or combination of methods, for each of our tailings facilities is chosen based on the factors above, with the first priority being the safety of communities, employees and the environment. Within these methods are three basic geometries: how the crest of the dam moves relative to the ore or dam? at the outset of the tailings facility's design.

Upstream

Teck Tailings Facility Inventory

The below table provides additional detail on each tailings facility with dam(s) managed by Teck at both our active operations and legacy sites. Not included below are 18 unconsolidated stock tailings facilities and two on-pit tailings facilities located at our steelmaking coal operations.

Mine Operation	Tailings Facility	Construction Method	Consolidation Classification	Status	Number of Tailings Dams	Most Recent Dam Safety Inspection Date	Independent Review Report
Active operations							
Cerro de Amalco, Chile	Estribo de Amalco Cerro de Amalco	Downstream	Very High	Active	5	2018	Yes
Black Pond, Canada	Black Pond Tailings Management Facility	Single Stage	Low	Closed	2	2019	No
Elk River, Canada	Lagoon A	Single Stage	Low	Closed	1	2018	Yes
	Lagoon B	Single Stage	Low	Closed	1	2018	Yes
	Lagoon C	Upstream	High	Closed	1	2018	Yes
	Lagoon D	Upstream	Very High	Active	1	2018	Yes
West Park, Canada	West Park Tailings Facility	Single Stage	Low	Active	1	2018	Yes
Harding River, Canada	North Tailings Pond	Downstream	Very High	Closed	1	2018	Yes
	South Tailings Pond	Downstream	Very High	Active	2	2018	Yes
	Turnbull Pit South Tailings Storage Facility	Pit	High	Active	1	2018	Yes
	2 Pit - 3 Pit Tailings Storage Facility	Combination	Low	Closed	2	2018	Yes
Greenfield, Canada	Tailings Storage Facility	Downstream	High	Active	2	2018	Yes
Highland Valley, Canada	Highland Valley	Combination	High	Closed	3	2018	Yes
Bethune, Canada	Upstream/Combination	Upstream/Combination	Very High	Closed	3	2018	Yes
Trojan, Canada	Combination / Upstream	Combination / Upstream	Very High	Closed	1	2018	Yes
Pavil Dam, United States	Tailings Pond 1	Upstream	High	Closed (Decommissioned)	1	Not Required	No
	Tailings Pond 2	Upstream	High	Closed (Decommissioned)	1	Not Required	No
	Tailings Pond 3	Downstream	High	Active	1	2018	No
Red Dog, United States	Tailings Storage Facility	Downstream/Combination	High	Active	2	2018	Yes

Teck

Relationships with Communities and Indigenous Peoples, Respecting Human Rights

- **Agreements in place at all mining operations** within or adjacent to Indigenous Peoples' territories
- **\$225 million to Indigenous businesses** in 2019 through procurement
- 72% of total **local employment** in 2019
- \$19 million in **community investment** in 2019
- Zero significant incidents that were human rights related in 2019
- Released updated Human Rights Policy in April 2020, first established in 2012

Inclusion and Diversity

- **Inclusion and Diversity:** pledged to improve representation of under-represented groups in our workforce: women, Indigenous, Asian, Black, and all people of colour (BIPOC), persons with disabilities, and members of the LGBTQ+ community
- **Gender Diversity:** 20% of workforce are women; 25% of Board of Directors, including the Chair; 32% of new hires
- **Workplace Flexibility:** family-friendly policies and programs in place, expanding remote working policy
- **Employee engagement and feedback:** 24-hour hotline, site-based inclusion and diversity chairs, leadership development programs

Range of projects in place to promote inclusion and diversity, including **STEM leadership courses at Trail Operations**

Sustainability Performance and Compensation

- Compensation program is linked to sustainability and health and safety performance through individual, department and company-wide objectives.
- Objectives related to climate change, communities and Indigenous Peoples, tailings and water management and others can affect bonuses by at least 10%–20%.
- Incentive compensation of the CEO and senior officers includes sustainability performance indicators.

Technology and Innovation

Teck

Renew

- **Unify and modernize Teck's core systems**
- Establish **technology foundation that facilitates deployment of Connect and Automate** reliably and at scale
- For example: **Wireless site infrastructure** to support automation, sensing, site communications, information access, pit-to-port integration and advanced analytics

Automate

- **Accelerate and scale autonomy program**
- **Transformational shift in safety**
- **Reduce per-tonne mining costs** with smaller fleets
- Provide **innovation platform** to enable implementation of advanced analytics to drive cycle time improvement & predictive maintenance

Connect

- **Link disparate systems into a collaborative digital platform** with powerful tools for sensing and analyzing in real time
- For example: **Dynamic and predictive models** to reduce variability, leading to **significant improvements in throughput and recovery**

Empower

- The natural implication of Renew, Automate, and Connect is we can **re-imagine what it means to work at Teck** and **re-design our operating model** to attract, recruit, train and retain the workforce of the future

Significant Value To Be Captured

SAFETY

Transformational safety impact with fewer people in high risk environments

PROFITABILITY

Step-change impact to profitability

PRODUCTIVITY

Increased productivity through new technologies and internal innovation

COST

Reduced operational costs by achieving manufacturing levels of variability

Example value capture areas: Autonomy, Integrated Operations, Advanced Analytics, Real Time Data Systems

A Sustainable Future

Electrification of Mining

Electric crew buses at our steel making coal operations.

Electric boom vehicles to be tested in pit.

Working with OEMs through ICMC to develop zero-GHG surface mining vehicles

Teck is taking steps to reduce its carbon footprint by starting to electrify the fleet.

Steelmaking Coal Business Unit & Markets

Teck

Steelmaking Coal Market

COVID-19 reducing demand, supply, and already low investment

Near term outlook: Uncertainties remain but signs of recovery emerging

- **China:** Risk of import quotas but record steel output, positive price arbitrage, and lower Mongolian imports
- **Ex-China markets:** Lockdown impact but improving steel outlooks and post-monsoon recovery in India
- **Supply:** Cost curve and supply response (COVID-19 and mine accidents) provide price support

Longer term outlook: Fundamentals remain unchanged

- **China:** Declining domestic reserves and persistent demand by coastal steel mills and new projects
- **Ex-China markets:** Mid-term demand boosted by government stimulus and long-term growth supported by Indian government targets, limited scrap supply and continued urbanization
- **Supply:** Declining existing capacity and minimal project pipeline (low investment and permitting challenges)

Steelmaking Coal Prices¹ (US\$/t)

Steelmaking Coal Facts

Global Coal Production¹:

~7.8 billion tonnes

Steelmaking Coal Production²:

~1,130 million tonnes

Export Steelmaking Coal²:

~320 million tonnes

Seaborne Steelmaking Coal²:

~285 million tonnes

- ~0.7 tonnes of steelmaking coal is used to produce each tonne of steel³
- Up to 100 tonnes of steelmaking coal is required to produce the steel in the average wind turbine⁴

Our market is seaborne hard coking coal²: ~190 million tonnes

Steelmaking Coal Demand Growth Forecast

Demand impacted by COVID-19 but signs of recovery

Seaborne Steelmaking Coal Imports¹ (Mt)

Change 2020 vs. 2019

Includes:

- China: Imports supported by positive price arbitrage and lower Mongolian imports
- JKT: Blast furnace closures and output cuts
- India: Lockdown setbacks; Improving demand, especially after the monsoon season
- Europe: Blast furnace closures; Cautiously reopening economies
- Brazil: 2nd highest number of COVID-19 cases and deaths; BF restarts: ArcelorMittal's Tubarao and Gerdau's Ouro Branco

Indian Steelmaking Coal Imports

Mid- & long-term imports supported by secular demand and government targets

Indian Crude Steel Production¹ (Mt)

Indian Seaborne Coking Coal Imports² (Mt)

Chinese Steelmaking Coal Imports

YTD May 2020 seaborne imports up by +11 Mt

Chinese Crude Steel Production (CSP), Hot Metal Production (HMP) and Coal Production (Mt)¹

Chinese Coking Coal Imports² (Mt)

Optimistic forecasts for China coal production and Mongolia imports with YTD May 2020 data

- -3 Mt YoY for domestic coking coal production
- -9 Mt YoY for Mongolian coking coal imports

Large Users in China Increasing Imports

~2/3 of China crude steel produced on coast; projects support imports

Seaborne Coking Coal Imports¹ (Mt)

LIUSTEEL FANGCHENG PROJECT

- Greenfield project
- Capacity: Phase 1 crude steel ~10 Mt
- Status: Construction started in 2017; 1 of 3 BF's completed in June 2020

BAOWU ZHANJIANG PLANT

- Expansion
- Capacity: crude steel 3.6 Mt (phase 2)
- Status: Construction started in Apr 2019; completion in 2021

ZONGHENG FENGAN PROJECT

- Inland plant relocating to coastal area
- Capacity: crude steel 8 Mt
- Status: Construction started in 2017; 2 of 5 blast furnaces (BFs) completed by May 2019; remaining 3 BF's to complete in 2020

HBIS LAOTING PROJECT

- Inland plant relocating to coastal area
- Capacity: crude steel 20 Mt
- Status: Construction started in 2017; completion in 2020

SHOUGANG JINGTANG PLANT

- Expansion
- Capacity: crude steel 9.4 Mt (phase 2)
- Status: Construction started in 2015; 1 of 2 BF's completed in Apr 2019

BAOWU YANCHENG PROJECT

- Inland plant relocating to coastal area
- Capacity: crude steel 20 Mt (phase 1: 8-10 Mt)
- Status: Phase 1 construction started in May 2019

Chinese Steel Margins

Margins improving from the March/April lows

China Hot Rolled Coil (HRC) Margins and Steelmaking Coal (HCC) Prices¹ (US\$/t)

Chinese Scrap Use Continues to Remain Low

Scrap supply limits EAF share in steel output

China's Scrap Ratio Lower than Other Countries (2019¹)

China Steel Use By Sector (2000-2019)²

2024 EAF share forecast to be similar to 2012

Steelmaking Coal Supply Forecast to Shrink

COVID-19 and market driven supply response

Seaborne Steelmaking Coal Exports¹ (Mt)

Change 2020 vs. 2019

Includes:

- USA: Cost pressures and weak demand especially from Europe and Brazil
- Australia: Mine disruptions (Moranbah North roof fall, Grosvenor explosion) and potential production impact (lower demand and COVID-19 safety measures)
- Russia: Expected supply rationalization (especially for PCI)
- Canada: Mine closures and COVID-19 production impact
- Mozambique: Cost pressures and weak demand (lower YTD production from Moatize)

US Coal Producers are Swing Suppliers

Australian Steelmaking Coal Exports¹ (Mt)

US Steelmaking Coal Exports¹ (Mt)

Canadian & Mozambique Steelmaking Coal Exports

Canadian Exports¹ (Mt)

Mozambique Exports¹ (Mt)

2nd Largest Seaborne Steelmaking Coal Supplier

Competitively positioned to supply steel producers worldwide

Sales Distribution

Sales to India exceeded China from 2018

An Integrated Long Life Coal Business

ELK VALLEY

- 840 million tonnes¹ of reserves support ~26 to 27 Mt of annual production for many years
- Geographically concentrated in the Elk Valley
- Established infrastructure and capacity with mines, railways and terminals

Long Life with Growth Potential in Steelmaking Coal

27 million tonnes of annual production capacity in 2021 and beyond

Moving Past Transition:

- Coal Mountain closed and production has been replaced with new mining areas in the Elk Valley
- Investment in plant throughput capacity at Elkview to capitalize on lower strip ratio beginning in 2020 and to replace higher cost Cardinal River production

Annual Production Capacity¹
(Million tonnes)

Steelmaking Coal Unit Costs

Unit Costs¹ in 2019

Operating Cost¹ Breakdown in 2019

Labour	31%
Contractors and Consultants	13%
Operating Supplies	16%
Repairs and Maintenance Parts	19%
Energy	17%
Other	4%
Total	100%

Setting Up for Strong Long-Term Cash Flows In Steelmaking Coal

Executing on four pillars to transform cost structure and optimize margins

- Strip ratio decreasing over next four years
 - Future strip ratio on par with historical average
- Strategically replaced high cost tonnes with low cost tonnes
 - Cardinal River closure offset with Elkview expansion in 2020
- Investing in RACE21™ technology and digital transformation
 - Lowering operating costs and increasing EBITDA¹ potential
- Increasing Neptune capacity to >18.5 million tonnes
 - Lowering port costs and increasing logistics chain flexibility

Targeting long term cost of sales below ~\$60 per tonne

Clean Strip Ratio¹

Investing in Production Capacity and Productivities In Steelmaking Coal

Maintaining historical dollar per tonne sustaining investment levels

2010-2016: Average spend of ~\$11 per tonne¹

- Swift at Fording River and Line Creek
- Reinvestment in 5 shovels, 50+ haul trucks

2017-2024: Average spend of ~\$11 per tonne¹

- 9 Million and Baldy Ridge at Elkview, Castle at Fording River
- Continue reinvestment in equipment fleets and infrastructure to increase mining productivity and processing efficiencies

Long term run rate for sustaining capital is ~\$11 to 12 per tonne

Teck's Pricing Mechanisms

Coal sales book generally moves with the market

SALES MIX

- ~40% quarterly contract price
- ~60% shorter than quarterly pricing mechanisms (including "spot")

PRODUCT MIX

- ~75% of production is high-quality HCC
- ~25% is a combination of SHCC, SSCC, PCI and a small amount of thermal
- Varies quarter-to-quarter based on the mine plans

KEY FACTORS IMPACTING TECK'S AVERAGE REALIZED PRICES

- Variations in our product mix
- Timing of sales
- Direction and underlying volatility of the daily price assessments
- Spreads between various qualities of steelmaking coal
- Arbitrage between FOB Australia and CFR China pricing

Teck

Pricing Mechanisms (%)

Index Linked Sales

- Quarterly contract sales index linked
- Contract sales index linked
- Contract sales with index fallback
- Spot sales index linked

Fixed Price Sales

- Contract sales spot priced
- Contract sales with index fallback
- Spot sales with fixed price

Quality and Basis Spreads

Impact Teck's average realized steelmaking coal prices

West Coast Port Capacity

NEPTUNE COAL TERMINAL

- Planned capacity growth to >18.5 Mtpa
- 100% ownership of coal capacity
- Current coal capacity 12.5 Mtpa
- Significant investment to upgrade and rejuvenate

RIDLEY TERMINALS

- Current capacity 18 Mtpa
- Teck contract:
 - 3 Mtpa until December 2020
 - Ramps up 6 Mtpa, with option to extend up to 9 Mtpa (January 2021 to December 2027)
- Planned growth to >20 Mtpa

WESTSHORE TERMINALS

- Current capacity 35 Mtpa
- Teck contracted capacity 19 Mtpa
- Contract expires March 31, 2021

**Port Capacity
(Nominal Mt)**

Copper Business Unit & Markets

Supply Continues to be at Risk

Copper Demand Improves

- Stronger cathode demand in China putting upward pressure on copper prices
- Demand Ex-China improving slowly
- Government closures of mines, ports and distribution keeping concentrate market tight and impacting cathode supply
- Concentrate market tightness into 2020
- Scrap shortages lowering cathode supply and increasing cathode demand
- Copper metal stocks continue to fall
- Mine growth to resume in 2021; peak in 2023 but projects deferred due low prices
- Short-term cathode surplus now shrinking

Copper Market

Raw materials weigh on downstream production

Tightness in Scrap Market Supporting Copper Price¹

Copper Scrap is 18% of Supply and 20% of Total Demand²

Cathode Demand 23.6 Mt

Copper Demand 29.6 Mt

- Demand for raw materials and mine disruptions keeping concentrate demand high
 - Mine production cuts over 900 kt vs. smelter cuts of ~250 kt
 - Chinese smelters trying to make up lost production from Q1 2020
 - Spot TC/RCs in high \$30's to low \$40's
- Scrap tightness driving LME cathode stocks into China on rising demand
 - Scrap starting to return on higher prices
 - Scrap generation still low due to lower manufacturing
 - Loss of scrap impacts supply and increases cathode demand
- Chinese cathode premiums up to \$95 per tonne, from \$65 per tonne in Q1

Global Copper Mine Production Increasing Slowly

Mine Production Set To Increase 1.6 Mt By 2023¹

Includes:

Mine	km ²
PT – Freeport (vs 2019)	480
Kamoa – Kakula	350
Quebrada Blanca	300
Quellaveco	300
Cobre Panama (vs 2019)	272
China to 2023	330
All others (Spence, Chuqui UG, Escondida)	1,310
SXEW Reductions to 2023	(450)
Reductions & Closures	(1,350)

- Chinese mine production flat to 2023 on lack of resources
- Total probable projects: 750 km²

Global Copper Mine Production² (kt contained)

Copper Disruptions Return To Impact Mines

TC/RCs Spot and BM Falling¹ (US\$/lb)

Disruptions (kt)²:

Rapid Growth in Chinese Copper Smelter Capacity

Limited and delayed domestic mine projects

Chinese Copper Mine Growth¹ (kt)

+3.2 Mt of New Smelting Capacity² (kt blister)

Copper Supply

Mine production rising and scrap availability falling

Sanctioned Projects Since 2017¹ (kt)

New mines commissioned: +2.3Mt
Of which ~1.8Mt deferred or delayed

Chinese Scrap/Blister Imports Fall² (Copper content, kt)

Chinese Imports Shift to Concentrates³ (Copper content, kt)

Copper Metal Stocks

Raw material shortages increase cathode demand

- Exchange stocks have fallen 263kt since March 2020, now equivalent to 6 days of global consumption
- SHFE stocks have decreased ~221kt since Lunar New Year
- Scrap shortages, consumer restocking, and stimulus spending drawing down inventories in China
- June Chinese imports of refined copper jumped 44% MoM with imports now up 25% YTD
- Prices decreased -25% between January 16, 2020 and March 23, 2020; now up 5.7% YTD

Daily Copper Prices (US\$/mt) and Stocks¹ (kt)

Long Life and Stable Assets in Copper

- Returned to full production rates ahead of plan
- Guidance of 45,000 to 50,000 tonnes copper in H2 2020
- Higher zinc production, with H2 2020 guidance of 55,000 to 60,000 zinc
- Reduced workforce on site

- Returned to full production; recovery plans in place
- Guidance of 70,000 to 75,000 tonnes copper in H2 2020
- Increased mill throughput and higher grades in H2
- RACE21™ initiatives implemented targeting throughput and recovery improvements

- Production rates maintained with reduced workforce on site
- Guidance of 27,000 to 30,000 tonnes copper in H2 2020
- RACE21™ application of processing analytics to optimize throughput and recovery

- Production rates maintained with reduced workforce on site
- Guidance of 3,000 to 5,000 tonnes copper in H2 2020
- Cathode production through 2020, with opportunities to extend into 2021

Foundation of stable operations

Copper Unit Costs

Unit Costs¹ in 2019

Operating Cost¹ Breakdown in 2019

Labour	29%
Contractors and Consultants	11%
Operating Supplies	16%
Repairs and Maintenance Parts	16%
Energy	20%
Other	8%
Total	100%

Cost Discipline and Cash Flow Focus in Copper

Productivity

- Focus on asset management and cross site sharing
- Robust continuous improvement pipeline a key driver of margins
- RACE21™ driving benefits across sites, continuing high value/low cost initiatives

Cost Reduction Program

- Accelerating implementation
- Operating costs: labour, contractors and maintenance practices
- Capital costs: project cancellations, deferrals and scope reductions

Focused on Minimizing Capital

- Essential water, tailings and regulatory projects drive sustaining capital requirements
- Near-term higher sustaining spending from tailings facility costs at Antamina
- Long-term sustaining capex (2023+) in copper expected at \$125 million, excluding QB2 and life extension projects

Major Growth and Life Extension Projects in Copper

Focus remains on QB2 construction, with other projects slowed

Quebrada Blanca

- Focus is on QB2 and construction re-start
- QB2: 316 kt of CuEq production for first 5 years¹
 - Doubles copper production with low strip ratio and AISC of US\$1.38/lb copper²
- QB3: Scoping Study on expansion potential complete
 - Mineral resource supports up to 3 times milling rate, with low strip ratio and low anticipated AISC²
 - Targeted trade-off studies in 2020 in preparation for PFS

NuevaUnión

- Reduced scope of work with minimal spending

Life Extension Projects

- HVC 2040: optimization work and environmental baseline
 - Targeting ~13 year extension
- Antamina: advancing extension and debottlenecking studies

Slide 123: Copper Unit Costs

1. Copper unit costs are reported in US dollars per pound. Non-GAAP financial measures. See "Non-GAAP Financial Measures" slides and "Use of Non-GAAP Financial Measures" section of the Q2 2020 news release for further information.

Slide 125: Major Growth and Life Extension Projects in Copper

1. Copper equivalent production calculated for the first 5 full years of production assuming US\$3.00/lb copper, US\$10.00/lb molybdenum and US\$18.00/oz silver without adjusting for payability.
2. All-in sustaining costs (AISC) are net cash unit costs (also known as C1 cash costs) plus sustaining capital expenditures. Net cash unit costs are calculated after cash margin by-product credits assuming US\$10.00/lb molybdenum and US\$18.00/oz silver. Net cash unit costs for QB2 include stripping costs during operations. AISC, Net cash unit cost and cash margins for by-products are non-GAAP financial measures. See "Non-GAAP Financial Measures" slides.

Zinc Business Unit & Markets

Teck

Zinc Mine Disruptions Maintain Pressure on Smelters

- COVID-19 and poor financials resulted in numerous mine closures, eliminating significant production in 2020
- Mines restarting after COVID-19 shutdowns starting to resume supply slowly, refined production not yet affected
- Chinese and ROW manufacturing has restarted, consumption driven by infrastructure, construction
- Increasing COVID-19 cases intensifying concern of further shutdowns to both supply and demand

Zinc Market

Raw materials shortages and improving demand support prices

Steel Demand in China Supporting Zinc Price¹

Zinc Use Tied to the Protection of Steel 60% of Total Demand²

Zinc Demand 13.1 Mt

Zinc End Uses 13.1 Mt

- Demand for raw materials and mine disruptions due to COVID-19 keeping concentrate demand high
 - Mine production growth in 2020 now forecast to decline with cuts >1Mt vs smelter cuts ~300 kt
 - Restart of SA mines starting to increase supply to Chinese smelters, helping to rebuild inventory
 - Additional conc helped to level Spot TCs at around US\$170/dmt
- Construction and infrastructure demand driving zinc demand in China
 - Galvanized utilization rates increased to 90%, coming off slightly for the slower summer season
 - Zinc demand increasing as automobile production and sales start to increase
 - Zinc increases steel's sustainable service life
- China Zinc premiums declined in July to ~US\$90/t as rising SHFE prices sidelined downstream buyers

Logistical Issues and Low Prices Impacted Chinese Mines, Smelter Production Increases

Chinese Mine Production Flat in 2020¹
(kt Contained)

Chinese Refined Production Up 11% Since 2018²
(kt Contained)

Global Mine Production Slowly Recovering, Although Cuts Already Significant for Year

Estimated Chinese Zinc Mine Growth Rarely Achieved¹ (Kmt Contained)

Changes in Mine Production Since Q1 2018²

Zinc Ore Grades Falling at Chinese Mines³ (Ore grade, zinc %)

Despite Increased Production in China, Increased Demand for Imported Metal Continues

De-stocking Continues
Chinese Stocks at Record Lows^{1,2} (kt)

Additional Zinc Metal
Required to Fill the Gap³ (kt)

Typical stock increase before Lunar New Year, decreasing as economy restarts;
Despite decreased consumption for China in Q1, additional metal required in 2020

Zinc Supply

Mine production at risk of declining further in 2020; 2021 growth optimistic

- Chinese mine production was expected to recover in 2020, after environmental policy cut production in last two years
 - COVID-19 related logistical issues restricted movement of concentrates within China
 - Low metal prices forced some miners to maintain low production levels or delay restarts after Lunar New Year
- Multiple mine closures in zinc-focused mining regions, Peru, Mexico, Bolivia, as a result of the COVID-19 restrictions
 - Removed over 1.0Mt of zinc contained in concentrate from 2020 production
- Low zinc prices continue to put pressure on mines
 - Mines delaying commissioning or closed due to poor Zinc market fundamentals

Zinc Mine Production¹ (kt contained)

Zinc Concentrate Treatment Charges

Zinc Metal Stocks

Consecutive deficits decreased zinc inventories

- Deficits over past 5 years have driven down stocks, with terminal stocks at only 2.1 days at the beginning of 2020
- LME refined zinc stocks are up almost 140% since the beginning of year, as manufacturing was forced to close in both Europe and most of the US due to COVID-19
 - LME stocks are up to only 3.5 days of consumption
- Despite growing domestic production, SHFE stocks continue to decrease since China restarted manufacturing
 - SHFE stocks down ~45% from the peak in March

Largest Global Net Zinc Mining Companies

Teck is the Largest Net Zinc Miner¹(kt)

Provides significant exposure to a rising zinc price

Integrated Zinc Business

- Operations maintained with travel restrictions and modified schedules
- Guidance of 260,000 to 285,000 tonnes zinc in H2 2020
- VIP2 project will help to offset lower grades; commissioning slowed due to COVID-19
- Increased number of tailings and water projects due to changing climate

- Operations maintained with reduced workforce on site
- Guidance of 155,000 to 165,000 tonnes refined zinc and 30,000 to 35,000 tonnes refined lead in H2 2020
- Completed maintenance shutdown in Q2
- Focus on margin improvement including RACE21™ implementation
- Higher TC's expected on material processed in H2 2020

Strengthening our zinc business

Cost Discipline and Cash Flow in Zinc

Productivity

- Focus on asset management and cross site sharing
- Robust continuous improvement pipeline a key driver of margins
- RACE21™ driving benefits across sites, continuing high value/low cost initiatives

Cost Reduction Program

- Accelerating implementation
- Operating costs: labour, contractors and maintenance practices
- Capital costs: project cancellations, deferrals and scope reductions

Focused on Minimizing Capital

- Essential water, tailings and regulatory projects drive sustaining capital requirements
- Near term higher sustaining spending from tailings and water-related projects at Red Dog – declining after 2022
- Long-term sustaining capex (2023+) in zinc expected at \$150 million, excluding life extension projects

Red Dog Sales Seasonality

- Operates 12 months
- Ships ~ 4 months
- Shipments to inventory in Canada and Europe; Direct sales to Asia
- ~65% of zinc sales in second half of year
- ~100% of lead sales in second half of year
- Sales seasonality causes net cash unit cost seasonality

Zinc Sales ¹ (%)

Lead Sales¹ (%)

Zinc Unit Costs

Unit Costs¹ in 2019

Red Dog Net Cash Unit Cost Seasonality

Normal quarterly variation not expected in 2020

Red Dog Net Cash Unit Costs¹ (US\$/lb)

- Seasonality of Red Dog unit costs largely due to lead sales during the shipping season
- Higher net cash unit costs expected in H2 2020 as by-product credits offset by significantly higher inventory costs due to lower production in H1 2020 and higher TC's for tonnes shipped in 2020

Red Dog in Bottom Quartile of Zinc Cost Curves

20 Percent of Zn Mines at Risk of Closing at Current Price

Red Dog Extension Project

Long Life Asset

- Aktigiruaq exploration target of 80-150 Mt @ 16-18% Zn + Pb¹
- Anarraaq Inferred Resource²: 19.4 Mt @ 14.4% Zn, 4.2% Pb

Quality Project

- Premier zinc district
- Significant mineralized system
- High grade

Stable Jurisdiction

- Operating history
- ~12 km from Red Dog operations
- Strong community ties

Slide 143: Red Dog Extension Project

1. Aktigiruk is an exploration target, not a resource. Refer to press release of September 18, 2017, available on SEDAR. Potential quantity and grade of this exploration target is conceptual in nature. There has been insufficient exploration to define a mineral resource and it is uncertain if further exploration will result in the target being delineated as a mineral resource.
2. See 2019 Annual Information Form.

Energy Business Unit & Markets

Teck

Energy Benchmark Pricing

**Calendar NYMEX WTI Price¹, WTI/WCS Basis Differential at Hardisty²
and WTI/WCS Basis Differential at the US Gulf Coast³ (US\$/bbl)**

Fort Hills is A Modern Oil Sands Mine

Production @ 100% (kbpd)

- Higher quality partially de-carbonized PFT product (lower GHG emissions)
- Due to COVID-19 and low WCS prices, operations temporarily transitioned to a single train in Q2 2020, with production at approximately 90 kbpd (100% level)
- Focused on operational excellence to reduce operating costs and capital efficiency

Fort Hills is a quality asset with significant upside potential

Canada is a Leader in ESG

The world benefits from Fort Hills low carbon intensity product during transition to renewables

**Yale's Environmental Performance Index
Of Top 10 Oil Reserve Countries**

**World Oil Producers
Ranked By Corruption and Volume¹**

Canada should be a supplier of choice to reduce global emissions

Best In Class Low Carbon Intensity Production

Our Fort Hills blend can displace carbon intensive crudes

Total Life Cycle Emissions Intensity
(kg CO₂e/bbl refined product – gasoline/diesel)

Lower carbon intensity than 50% of the US refined barrels of oil

Fort Hills Blend Widely Accepted In Market

A preferred feedstock and supplier of choice

We produce a high quality refinery feedstock

- Low GHG intensity: <50% of US crude supply
- Including in-situ and upgraded synthetic

Our sales mix provides diverse market access

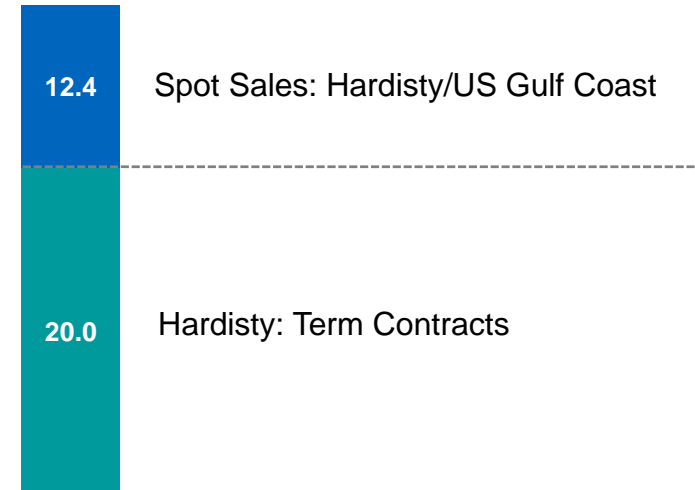

- Pipeline connected with rail loading as needed
- Hardisty and US Gulf Coast core markets

Teck's Expected Commercial Activities In 2020

Bitumen production	23.5 kbpd ¹
+ Diluent acquisition	8.9 kbpd
= Bitumen blend sales	32.4 kbpd

Delivery Location (Kbpd)

Teck Blend:
32.4 Kbpd

We are well positioned for future opportunities

Export Capacity Needed To Meet Global Demand

New pipelines starting to progress towards a clearer line of sight

Near term (2019-2021):

- Canadian export capacity lagging
- Reliant on rail (400-500 Kbpd)

Pipeline development progressing:

- Enbridge: 370 Kbpd (2021)
- Keystone XL: 800 Kbpd (2023)
- TMX: 600 Kbpd (2022-2023)

Longer term:

- Global heavy refining capacity increase
- US, India and China largest heavy importers

Western Canada Supply & Markets¹ (Mbpd)
Reliant on crude by rail 2019-2022

Existing pipeline/rail sufficient to meet takeaway capacity through 2023

Non-GAAP Financial Measures

Teck

Non-GAAP Financial Measures

Our financial results are prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board. This document refers to a number of Non-GAAP Financial Measures which are not measures recognized under IFRS and do not have a standardized meaning prescribed by IFRS or Generally Accepted Accounting Principles (GAAP) in the United States.

The Non-GAAP Measures described below do not have standardized meanings under IFRS, may differ from those used by other issuers, and may not be comparable to such measures as reported by others. These measures have been derived from our financial statements and applied on a consistent basis as appropriate. We disclose these measures because we believe they assist readers in understanding the results of our operations and financial position and are meant to provide further information about our financial results to investors. These measures should not be considered in isolation or used in substitute for other measures of performance prepared in accordance with IFRS.

We have changed our calculations of adjusted profit attributable to shareholders and adjusted EBITDA to include additional items that we have not previously included in our adjustments and have also changed our debt ratios to compare debt and net debt to adjusted EBITDA rather than EBITDA. These changes were made from January 1, 2020 onwards and comparative figures have been restated to conform to the current period presentation. In addition to items previously adjusted, our adjusted profit attributable to shareholders and adjusted EBITDA now include adjustments for environmental costs, including changes relating to the remeasurement of decommissioning and restoration costs for our closed operations due to changes in discount rates, share-based compensation costs, inventory write-downs and reversals and commodity derivatives. We believe that by including these items, which reflect measurement changes on our balance sheet, in our adjustments, our adjusted profit attributable to shareholders and adjusted EBITDA will reflect the recurring results of our core operating activities. This revised presentation will help us and readers to analyze the rest of our results more clearly and to understand the ongoing cash generating potential of our business. With respect to our debt ratios, we believe that using adjusted EBITDA, will present a more meaningful basis for us and the reader to understand the debt service capacity of our core operating activities.

Adjusted profit attributable to shareholders – For adjusted profit, we adjust profit attributable to shareholders as reported to remove the after-tax effect of certain types of transactions that reflect measurement changes on our balance sheet or are not indicative of our normal operating activities. We believe adjusted profit helps us and readers better understand the results of our core operating activities and the ongoing cash generating potential of our business.

Adjusted basic earnings per share – Adjusted basic earnings per share is adjusted profit divided by average number of shares outstanding in the period.

Adjusted diluted earnings per share – Adjusted diluted earnings per share is adjusted profit divided by average number of fully diluted shares in a period.

EBITDA – EBITDA is profit before net finance expense, provision for income taxes, and depreciation and amortization.

Adjusted EBITDA – Adjusted EBITDA is EBITDA before the pre-tax effect of the adjustments that we make to adjusted profit attributable to shareholders as described above.

The adjustments described above to profit attributable to shareholders and EBITDA highlight items and allow us and readers to analyze the rest of our results more clearly. We believe that disclosing these measures assists readers in understanding the ongoing cash generating potential of our business in order to provide liquidity to fund working capital needs, service outstanding debt, fund future capital expenditures and investment opportunities, and pay dividends.

Gross profit before depreciation and amortization – Gross profit before depreciation and amortization is gross profit with the depreciation and amortization expense added back. We believe this measure assists us and readers to assess our ability to generate cash flow from our business units or operations.

Gross profit margins before depreciation – Gross profit margins before depreciation are gross profit before depreciation and amortization, divided by revenue for each respective business unit. We believe this measure assists us and readers to compare margins on a percentage basis among our business units.

Unit costs – Unit costs for our steelmaking coal operations are total cost of goods sold, divided by tonnes sold in the period, excluding depreciation and amortization charges. We include this information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in the industry.

Adjusted site cash cost of sales – Adjusted site cash cost of sales for our steelmaking coal operations is defined as the cost of the product as it leaves the mine excluding depreciation and amortization charges, out-bound transportation costs and any one-time collective agreement charges and inventory write-down provisions.

Total cash unit costs – Total cash unit costs for our copper and zinc operations includes adjusted cash costs of sales, as described above, plus the smelter and refining charges added back in determining adjusted revenue. This presentation allows a comparison of total cash unit costs, including smelter charges, to the underlying price of copper or zinc in order to assess the margin for the mine on a per unit basis.

Non-GAAP Financial Measures

Net cash unit costs – Net cash unit costs of principal product, after deducting co-product and by-product margins, are also a common industry measure. By deducting the co- and by-product margin per unit of the principal product, the margin for the mine on a per unit basis may be presented in a single metric for comparison to other operations. Readers should be aware that this metric, by excluding certain items and reclassifying cost and revenue items, distorts our actual production costs as determined under IFRS.

Adjusted cash cost of sales – Adjusted cash cost of sales for our copper and zinc operations is defined as the cost of the product delivered to the port of shipment, excluding depreciation and amortization charges, any one-time collective agreement charges or inventory write-down provisions and by-product cost of sales. It is common practice in the industry to exclude depreciation and amortization as these costs are non-cash and discounted cash flow valuation models used in the industry substitute expectations of future capital spending for these amounts.

Adjusted operating costs for our energy business unit is defined as the costs of product as it leaves the mine, excluding depreciation and amortization charges, cost of diluent for blending to transport our bitumen by pipeline, cost of non-proprietary product purchased and transportation costs of our product and non-proprietary product and any one-time collective agreement charges or inventory write-down provisions.

Cash margins for by-products – Cash margins for by-products is revenue from by- and co-products, less any associated cost of sales of the by and co-product. In addition, for our copper operations, by-product cost of sales also includes cost recoveries associated with our streaming transactions.

Adjusted revenue – Adjusted revenue for our copper and zinc operations excludes the revenue from co-products and by-products, but adds back the processing and refining charges to arrive at the value of the underlying payable pounds of copper and zinc. Readers may compare this on a per unit basis with the price of copper and zinc on the LME.

Adjusted revenue for our energy business unit excludes the cost of diluent for blending and non-proprietary product revenues, but adds back crown royalties to arrive at the value of the underlying bitumen.

Blended bitumen revenue – Blended bitumen revenue is revenue as reported for our energy business unit, but excludes non-proprietary product revenue, and adds back crown royalties that are deducted from revenue.

Blended bitumen price realized – Blended bitumen price realized is blended bitumen revenue divided by blended bitumen barrels sold in the period.

Operating netback – Operating netbacks per barrel in our energy business unit are calculated as blended bitumen sales revenue net of diluent expenses (also referred to as bitumen price realized), less crown royalties, transportation and operating expenses divided by barrels of bitumen sold. We include this information as investors and investment analysts use it to measure our profitability on a per barrel basis and compare it to similar information provided by other companies in the oil sands industry.

The debt-related measures outlined below are disclosed as we believe they provide readers with information that allows them to assess our credit capacity and the ability to meet our short and long-term financial obligations.

Net debt – Net debt is total debt, less cash and cash equivalents.

Debt to debt-plus-equity ratio – debt to debt-plus-equity ratio takes total debt as reported and divides that by the sum of total debt plus total equity, expressed as a percentage.

Net debt to net debt-plus-equity ratio – net debt to net debt-plus-equity ratio is net debt divided by the sum of net debt plus total equity, expressed as a percentage.

Debt to Adjusted EBITDA ratio – debt to adjusted EBITDA ratio takes total debt as reported and divides that by adjusted EBITDA for the twelve months ended at the reporting period, expressed as the number of times adjusted EBITDA needs to be earned to repay all of the outstanding debt.

Net debt to Adjusted EBITDA ratio – net debt to adjusted EBITDA ratio is the same calculation as the debt to adjusted EBITDA ratio, but using net debt as the numerator.

Net debt to capitalization ratio – net debt to capitalization ratio is net debt divided by the sum of total debt plus equity attributable to shareholders. The ratio is a financial covenant under our revolving credit facility.

Non-GAAP Financial Measures

Reconciliation of Profit (Loss) and Adjusted Profit

(C\$ in millions)	Three months ended June 30, 2020	Three months ended June 30, 2019	Six months ended June 30, 2020	Six months ended June 30, 2019
Profit (loss) attributable to shareholders	\$ (149)	\$ 231	\$ (461)	\$ 861
Add (deduct):

Blended bitumen price realized (US\$/barrel) (D/C)	\$ 13.93	\$ 51.40	\$ 23.67	\$ 47.08

1. Bitumen price realized represents the realized petroleum revenue (blended bitumen sales revenue) net of diluent expense, expressed on a per barrel basis. Blended bitumen sales revenue represents revenue from our share of the heavy crude oil blend known as Fort Hills Reduced Carbon Life Cycle Dilbit Blend (FRB), sold at the Hardisty and U.S. Gulf Coast market hubs. FRB is comprised of bitumen produced from Fort Hills blended with purchased diluent. The cost of blending is affected by the amount of diluent required and the cost of purchasing, transporting and blending the diluent. A portion of diluent expense is effectively recovered in the sales price of the blended product. Diluent expense is also affected by Canadian and U.S. benchmark pricing and changes in the value of the Canadian dollar relative to the U.S. dollar.

We include unit cost information as it is frequently requested by investors and investment analysts who use it to assess our cost structure and margins and compare it to similar information provided by many companies in our industry.
