## Technical Report Overview

### Report: Koocanusa Water Quality 2017 Report

**Overview:** This report summarizes the 2017 water quality results at the five monitoring stations in the Koocanusa Reservoir required under Permit 107517.

This report was prepared by Teck.

## Executive Summary

*Environmental Management Act* Permit 107517 takes an area based approach to authorizing and managing water quality constituents of interest originating from current and historical mining activities in the Elk River watershed. To do so requires an extensive surface water monitoring program that extends to five sampling locations in the Koocanusa Reservoir. These permitted sampling locations are used to evaluate compliance, and supporting implementation of the Elk Valley Water Quality Plan. The following report is submitted in fulfillment of Section 10.8 of Permit 107517 and summarizes activities and monitoring results (specifically water quality results as that was the only monitoring completed by Teck in the reservoir in 2017) in the Koocanusa Reservoir as well as measurements relative to the appropriate Site Performance Objectives during the 2017 calendar year.

This report is also submitted to fulfill requirements as outlined in the Ministry of Environment and Climate Change Strategy notification of acceptance of Teck Coal's updated Koocanusa Reservoir Study Design 2018-2020. On June 8, 2018, Teck received notification from the Ministry of Environment and Climate Change Strategy that the study design as updated, has been accepted subject to multiple conditions, one of which indicating that a summary of monthly selenium and nitrate loadings to the Koocanusa Reservoir must be included in the annual Koocanusa Reservoir monitoring report required in Section 10.8 of Permit 107517, commencing with the report due June 30, 2018.

In 2017 water quality monitoring was completed at the sampling locations and frequencies as required by the Surface Water Discharge and Receiving Environment Monitoring Program described in Appendix 2 of Permit 107517. For the purpose of this report, loadings were also calculated for nitrate and selenium into the Koocanusa Reservoir based on data captured on the Elk River. Calculated flow and measured water quality concentrations for the parameters listed above were collected at a non-permitted monitoring location at the mouth of the Elk River just upstream of the confluence with the Koocanusa Reservoir at the Highway 93 bridge monitoring location.

No other activities were carried out in the Koocanusa Reservoir in 2017.

There were no exceedances to the Site Performance Objectives at the Koocanusa Reservoir Order Station EMS E300230 (RG\_DSELK) in 2017. All samples were collected as required with the exception of winter months when the reservoir is in a riverine state with ice cover/flowing water conditions and inaccessible due to safety concerns as recognized by Permit 107517.

## 1 Introduction

After consideration of the July 22, 2014, Elk Valley Water Quality Plan (EVWQP) and approval by the Ministry of Environment (ENV) on November 18, 2015, Permit 107517 was issued under provisions of the *Environmental Management Act* (EMA). Permit 107517 takes an area-based approach to authorizing and managing water quality constituents of interest originating from current and historical mining activities in the Elk Valley.

This report was prepared to meet the requirements of Section 10.8 of Permit 107517 and summarizes activities and specific water quality results in the Koocanusa Reservoir as well as measurements relative to appropriate Site Performance Objectives during the 2017 calendar year. This report also satisfies requirements as described in the Final Koocanusa Reservoir Study Design, 2018-2020 acceptance notification which states that Teck must report a summary of monthly selenium and nitrate loadings to the Koocanusa Reservoir and a summary explanation including the formula used to calculate monthly loading and methods to estimate both flow and concentrations.

This document will also be submitted to the Koocanusa Reservoir Monitoring and Research Working Group and the Environmental Monitoring Committee (EMC) as a fulfillment of reporting requirements associated with Teck's mining authorizations in the Elk Valley.

The Elk Valley, located in the southeast corner of British Columbia, is bisected by the Elk River which in turn is fed by a number of tributaries of which the Fording River and Michel Creek are the largest. The Elk River then flows into the Koocanusa Reservoir which is located approximately 75 km downstream of all Teck mining operations and forms part of the United States/Canada border (Figure 1).

The following report summarizes monitoring data for receiving environment water sampling sites in the Koocanusa Reservoir as required in Permit 107517. No other activities were carried out by Teck in the Koocanusa Reservoir in 2017.

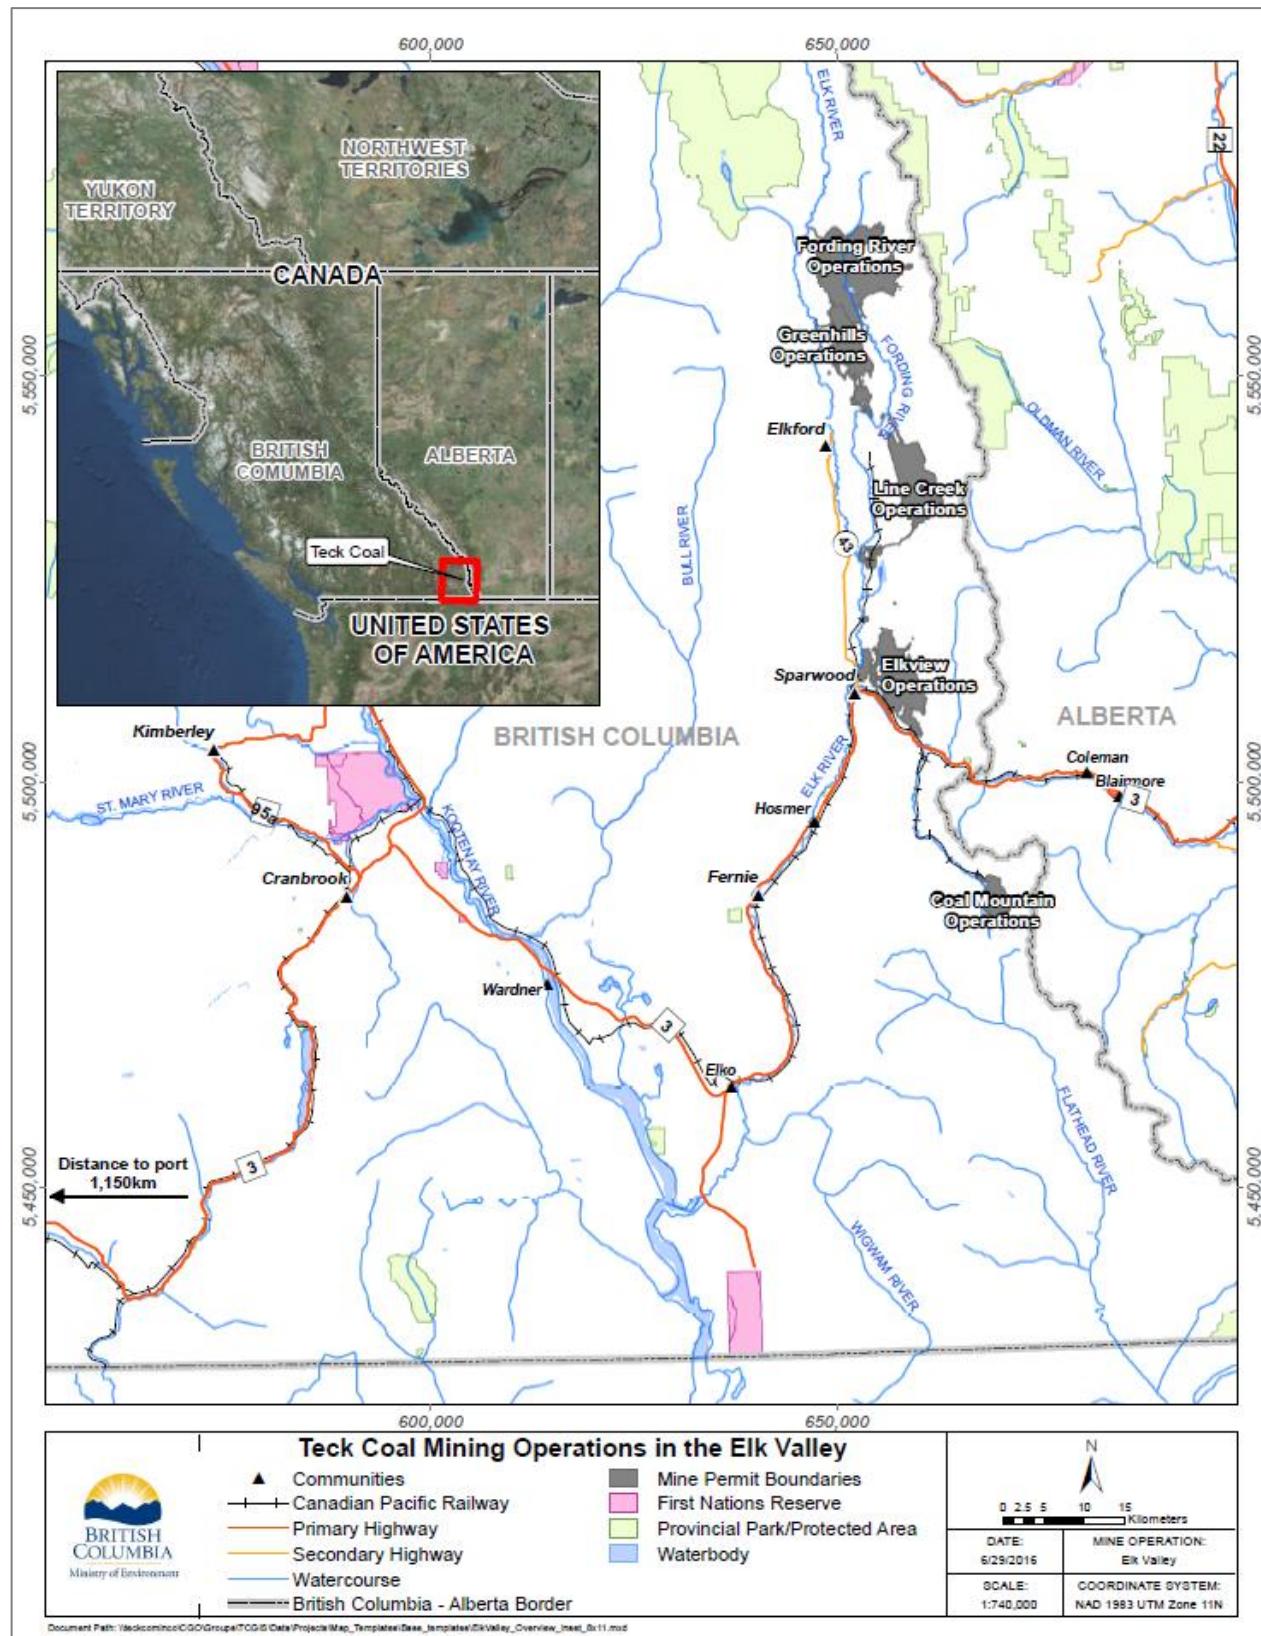

Figure 1. Location of Teck's operations within the Elk Valley, British Columbia.

## 1.1 Receiving Environment Water Sampling Sites

Permit 107517 requires the collection of water samples in the Koocanusa Reservoir at five locations as indicated in Figure 2. One location is considered an Order Station with Site Performance Objectives (SPOs) and the remaining four are monitoring locations. SPOs were developed to evaluate the implementation success of the Elk Valley Water Quality Plan. To aid in this evaluation, an SPO in the Koocanusa Reservoir was established at RG\_DSELK, the Koocanusa Reservoir – South of the Elk River. A summary of the short-term SPOs are presented in Table 1 below as this is the current SPO that applies to data captured in the reservoir.

**Table 1. Short-term site performance objectives established at Order stations within the Elk Valley.**

EMS ID	Site ID	Constituent	Monthly Average SPO	Timeframe
E300230	RG_DSELK	Total Selenium	2 µg/L	Immediately
		Nitrate-N	3 mg/L as N	Immediately
		Sulphate	308 mg/L	Immediately
		Dissolved Cadmium	0.19 µg/L	Immediately

Notes:

- Environmental Monitoring Site (EMS) identification numbers (IDs) correspond to those listed in the Ministry's monitoring data repository.
- As was the case for effluent limits developed for Compliance Points, SPOs for cadmium are hardness dependent and for purposes herein have been set at 360 mg/L as CaCO<sub>3</sub> (sites 0200378, 0200028, and E206661), 200 mg/L as CaCO<sub>3</sub> (sites 0200027, 0200393, and E294312), and 150 mg/L as CaCO<sub>3</sub> (site E300230), respectively.

Table 2 provides sample location descriptions with Table 3 indicating monitoring frequency and measured parameters.

**Table 2. Summary of receiving environment water sampling sites for the Koocanusa Reservoir based on the version of Permit 107517 dated October 13, 2017.**

EMS ID	Site ID	Sampling Site Type	Sampling Site Description
E300095	RG_KERRRD	Receiving Environment	Koocanusa Reservoir Downstream of Kikkoman Creek
E300092	RG_GRASMERE	Receiving Environment	Koocanusa Reservoir West of Grasmere
E300093	RG_USGOLD	Receiving Environment	Koocanusa Reservoir Upstream of Gold Creek
E300094	RG_BORDER	Receiving Environment	Koocanusa Reservoir Upstream of the Canada/US border
E300230	RG_DSELK	Receiving Environment	Koocanusa Reservoir – South of the Elk River

Notes:

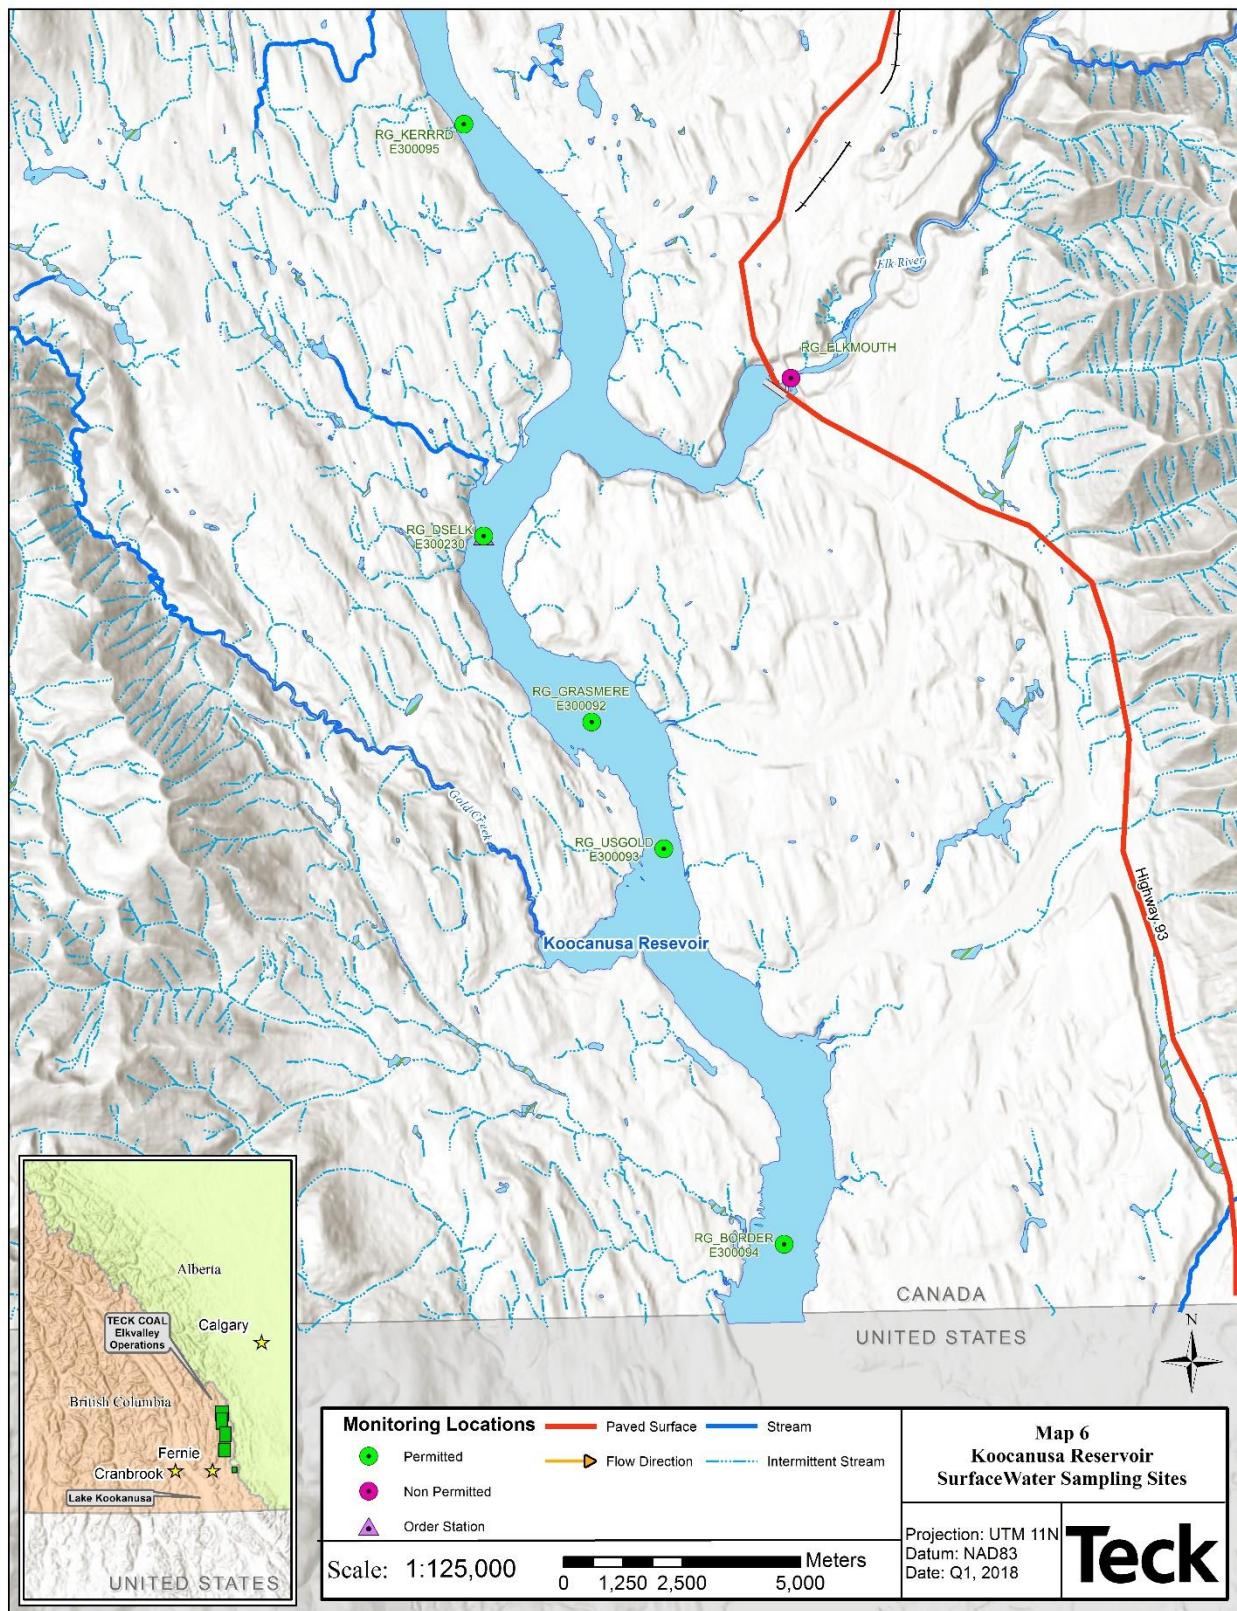

- Environmental Monitoring Site (EMS) identification numbers (IDs) correspond to those listed in the ENV's monitoring data repository.
- All receiving water sampling sites within the Koocanusa Reservoir are located on lands and waters of Canada.

**Table 3. Koocanusa Reservoir Monitoring Frequency and measured parameters.**

<b>MONITORING SITES – KOOCANUSA RESERVOIR</b>					
<b>Site ID</b>	RG_KERRRD	RG_GRASMERE	RG_USGOLD	RG_BORDER	LK2 RG_DSELK
<b>EMS Number</b>	E300095	E300092	E300093	E300094	E300230
<b>MONITORING FREQUENCY</b>					
Field Parameters	M	M	M	M	M
Conventional Parameters	M/EH	M/EH	M/EH	M	M/EH

Figure 2. Koocanusa Reservoir Monitoring Locations

## 2 Surface Water Monitoring Program

As outlined in Permit 107517, water samples are routinely collected from the Koocanusa Reservoir. The following section provides a summary of water quality monitoring results collected in 2017. Additional information in regards to sampling methodologies and quality assurance/quality control (QA/QC) activities can be found in the Permit 107517 Annual Water Quality report submitted March 31<sup>st</sup> of each year.

### 2.1 Surface Water Monitoring Program

Surface water sampling activities are carried out over a range of frequencies throughout the calendar year (e.g., weekly, monthly, quarterly etc.), with samples analyzed for a number of water quality parameters including:

- **Field Parameters** - water temperature, specific conductance, dissolved oxygen, pH, flow.
- **Conventional Parameters** - specific conductance, total dissolved solids, total suspended solids, hardness, alkalinity, dissolved organic carbon, total organic carbon, turbidity.
- **Major Ions** - bromide, fluoride, calcium, chloride, magnesium, potassium, sodium, sulphate, sulphide.
- **Nutrients** - ammonia, nitrate, nitrite, total Kjeldahl nitrogen (TKN), orthophosphate, total phosphorus.
- **Dissolved Metals** - aluminum, antimony, arsenic, barium, beryllium, bismuth, boron, cadmium, chromium, cobalt, copper, iron, lead, lithium, manganese, mercury, molybdenum, nickel, selenium, silver, strontium, thallium, tin, titanium, uranium, vanadium, and zinc.
- **Total Metals** - aluminum, antimony, arsenic, barium, beryllium, bismuth, boron, cadmium, chromium, cobalt, copper, iron, lead, lithium, manganese, mercury, molybdenum, nickel, selenium, silver, strontium, thallium, tin, titanium, uranium, vanadium, and zinc.
- **Additional Parameters Specific to Koocanusa Reservoir** - Secchi depth and chlorophyll-a.

### 2.2 Surface Water Quality – Receiving Environment Monitoring Results

A summary of 2017 water quality data recorded at monitoring locations in the Koocanusa Reservoir for total selenium, nitrate nitrogen and sulphate is presented in Figures 3 to 17. For all non Order Stations, results are compared to British Columbia Water Quality Guidelines and for Order Station RG\_DSELK, data is compared to Site Performance Objectives; note these are the same values in most cases.

Data are presented as monthly averages where all samples collected within each month are averaged to yield one monthly average result. Note that in some cases, only one sample is collected per month in line with the sampling frequency outlined in Permit 107517. All water quality data, including samples used to calculate monthly averages, is in Appendix A. Although not previously included in annual or quarterly reporting under Permit 107517, data collected from RG\_ELKMOUTH is also included in Appendix A as it was used in the monthly loading calculations.

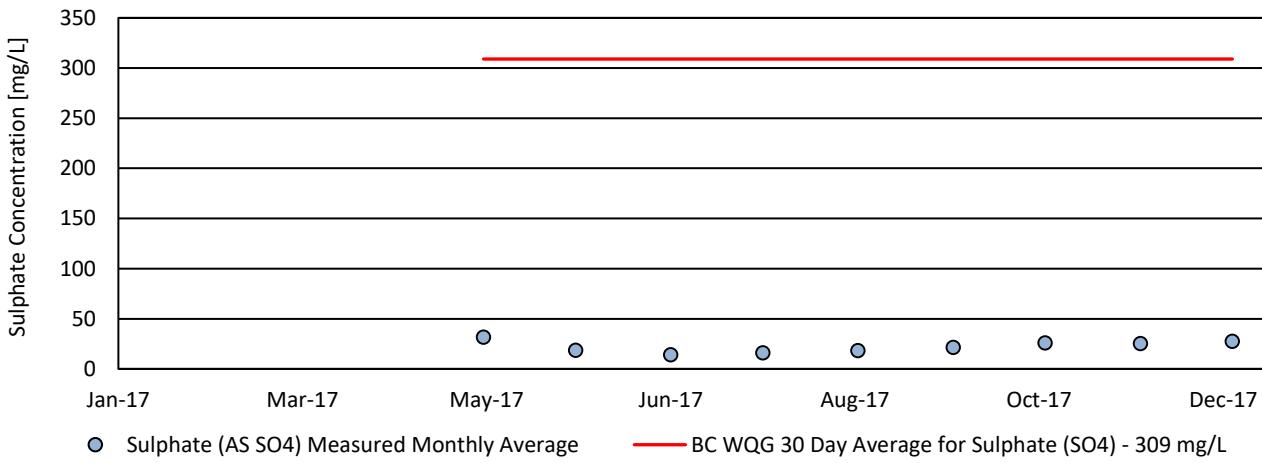

Figure 17. Monthly Average Sulphate Concentrations at RG\_BORDER E300094

## 2.3 Estimated Monthly Loadings to the Koocanusa Reservoir

Monthly loadings to the Koocanusa Reservoir of selenium and nitrate are presented in Table 4 below. Monthly average concentrations of selenium and nitrate measured at RG\_ELKMOUTH relative to flow were used to estimate loadings in to the reservoir. Flow is not measured directly at RG\_ELKMOUTH; rather, flow is scaled from the nearest continuous flow monitoring station on the Elk River which is located in Fernie, BC and is operated by the Water Survey of Canada. A factor of 1.53 is used to scale the flow measured at the Fernie hydrometric station to estimate flow at RG\_ELKMOUTH which is located immediately upstream of the confluence of the Elk River and Koocanusa Reservoir at the Hwy 93 bridge.

This scaling method was derived by Golder Associates using current Environment Canada hydrometric gauges (Elk River at Fernie 08NK002) and historical hydrometric gauges (Elk River at Phillips Bridge 08NK005). Flow is prorated based on a relationship between monthly flows where RG\_ELKMOUTH = RG\_FERNIE x 1.53.

Hydrometric data specific to the Elk River at Fernie station (08NK002) can be found at the following link.

[https://wateroffice.ec.gc.ca/report/real\\_time\\_e.html?stn=08NK002](https://wateroffice.ec.gc.ca/report/real_time_e.html?stn=08NK002)

All continuous hydrometric data collected and managed by the Water Survey of Canada can be found at the following link.

[https://wateroffice.ec.gc.ca/mainmenu/real\\_time\\_data\\_index\\_e.html](https://wateroffice.ec.gc.ca/mainmenu/real_time_data_index_e.html)

Table 4. Estimated Monthly Loadings to the Koocanusa Reservoir of Nitrate and Selenium

Date	Monthly Average Concentrations		Daily Average Flow @ RG_ELKFERNIE (m <sup>3</sup> /s)	Daily Average Flow @ RG_ELKMOUTH (m <sup>3</sup> /s) (scaled from RG_ELKFERNIE factor of 1.53)	Estimated Loads in Koocanusa Reservoir	
	Nitrate Nitrogen (NO <sub>3</sub> ), AS N (mg/L)	Total Selenium (mg/L)			Nitrate NO <sup>3</sup> (kg/month)	Total Selenium (kg/month)
January	1.5900	0.0062	17.11	26.18	111480	433
February	1.4700	0.0063	20.81	31.83	113212	485

April	0.8215	0.0043	38.02	58.17	123853	646
May	0.7806	0.0037	159.88	244.61	511426	2404
June	0.7520	0.0034	180.16	275.64	537282	2431
July	0.8175	0.0041	57.41	87.84	192327	956
August	1.0800	0.0053	27.57	42.19	122038	597
September	1.2300	0.0060	20.98	32.09	102322	498
October	1.1600	0.0064	19.37	29.64	92082	509
November	1.2400	0.0071	19.80	30.29	97367	560
December	1.1400	0.0061	17.89	27.37	83560	447

Notes:

1. Flow data is scaled from WSC station located in Fernie. Data used for these calculations has not undergone QAQC by WSC
2. Winter flows are subject to ice cover on the Elk River

Estimated loads in the Koocanusa Reservoir (kg/month) are calculated using the following formula. Note that the calculated daily load is then multiplied by the number of days in each month to result in a monthly loading rate and meet the requirement for this report.

$$m^3/s * mg/L * 86.4 = kg/day * number\ of\ days\ in\ each\ month$$

### 3 Summary

*Environmental Management Act* Permit 107517 takes an area based approach to authorizing and managing water quality constituents of interest originating from current and historical mining activities in the Elk Valley. To do so requires a surface water monitoring program that extends to five sampling locations in the Koocanusa Reservoir. These permitted sampling locations are used to evaluate compliance, and support implementation of the Elk Valley Water Quality Plan. The above report is submitted in fulfillment of Section 10.8 of Permit 107517 and summarizes activities and specific water quality results in the Koocanusa Reservoir and compares results to appropriate Site Performance Objectives and BC Water Quality Guidelines for 2017 data.

This report is also submitted to fulfill requirements as outlined in the Ministry of Environment and Climate Change Strategy notification of acceptance of Teck Coal's updated Koocanusa Reservoir Study Design 2018-2020. On June 8, 2018, Teck received notification from the Ministry of Environment and Climate Change Strategy that the submitted study design, has been accepted subject to multiple conditions, one of which indicating that a summary of monthly selenium and nitrate loadings to the Koocanusa Reservoir must be included in the annual Koocanusa Reservoir monitoring report required in Section 10.8 of Permit 107517, commencing with the report due June 30, 2018.

In 2017 water quality monitoring was completed at the sampling locations and frequencies as required by the Surface Water Discharge and Receiving Environment Monitoring Program described in Appendix 2 of Permit 107517. For the purpose of this report, loadings were also calculated for nitrate and selenium into the Koocanusa Reservoir based on data captured on the Elk River. Calculated flow and measured water quality concentrations for nitrate and selenium were collected at a non-permitted monitoring location at the mouth of the Elk River just upstream of the confluence with the Koocanusa Reservoir at the Highway 93 bridge monitoring location.

No other activities were carried out in the Koocanusa Reservoir in 2017.

There were no exceedances to the Site Performance Objectives at the Koocanusa Reservoir Order Station EMS E300230 (RG\_DSELK) in 2017. All samples were collected as required with the exception of winter months when the reservoir is in a riverine state with ice cover/flowing water conditions and inaccessible due to safety concerns as recognized by Permit 107517.
