Contractor Mobile Equipment Servicing Liquid Waste

Description

Handling and disposal procedures for used; lubricating oil, gear oil, transmission oil, motor oil, contaminated diesel, antifreezes and any other service related liquids.

Hazard Category

Recycled onsite or offsite, these items are **non-hazardous waste**.

Management

1. TCAK Contract Managers will determine if their contractor will need to service mobile equipment while onsite.
2. If mobile equipment servicing will be required, the Contract Manager will provide an estimate of the waste types and volumes to the Warehouse Supervisor.
3. The Contract Manager will determine the number of containers required and provide appropriately labels for containers, portable secondary containment, waste logs and handling instructions to the contractor.
4. When equipment servicing is complete or the containers are full the Contract Manager will make arrangements with the Warehouse Supervisor to have the waste delivered to the Warehouse and the signed and completed waste logs delivered to the Environmental Department.
5. Additional containers will be provided by the Contract Manager as required.
6. Upon project completion the contract manager will ensure that all containers, secondary containments, and logs are delivered to the appropriate locations.
7. The Warehouse will store the waste to be shipped offsite to an approved recycler and keep secondary containments for future use.

Special Instructions

Wastes are not to be mixed. Contract Manager will provide direction on proper waste segregation.

If the waste types are mixed the contractor will inform his contract manager. The Contract Manager will contact the Environmental Coordinator – Waste for a determination of the treatment options for the mixed waste.

Unapproved waste mixtures are not to be delivered to the Warehouse. Contact the Environmental Coordinator – Waste for directions.

The Warehouse will not accept containers without proper labeling.
